NINETEENTH EDITION
Thirteen Hundredth Thousand
(1,300,000 COPIES)

This work is respectfully dedicated to the
English-speaking People of the Whole World.

INTRODUCTION

With the present edition, the total issue of PEARS' CYCLOPÆDIA is brought up to 1,300,000 copies, representing a popularity exceeding all previous records. Thirteen hundred thousand copies! It is difficult to conceive what such a vast aggregation of books represents in actual material of production. This single volume consists of 1,070 pages. The 1,300,000 copies weigh over 910 tons, and would require more than 40 miles of book shelving to accommodate them. Taking the pages themselves and laying them down singly, end to end, we should get a length of 75,130 miles, or about three times round the world.

Two main ideas have been kept in view in getting together this work—the providing in a concise yet comprehensive form, of not only the pith and substance of the information usually contained in a good Cyclopædia of many volumes, but the inclusion of a large number of what may be called “everyday subjects,” such as people are likely to require ready information upon at any moment.

The various articles are treated with as much fullness as space allows. In every instance the essential and latest facts are given; thus EACH EDITION IS PRACTICALLY A NEW WORK, supplying in a handy form a reliable book of reference dealing with all manner of subjects, serviceable alike to the man of business, the professional man, the student, the housewife—and of value to anybody and everybody.

A Chronicle of the Great War is now added; and, in their proper places in the volume, the chief changes and developments resulting from the War are noted. These alterations are spread over the General Information, Prominent People, and Gazetteer sections, and represent a material addition to the work.

That this book, with its 1,070 closely but clearly printed pages, constitutes by far the biggest shilling'sworth of cyclopædic matter ever offered to the public cannot, we think, be gainsaid.

** We are deeply grateful for the patronage accorded to the volume; its popularity is our highest reward.*

THE EDITOR.

H.R.H. THE PRINCE OF WALES.
AS KNIGHT OF THE GARTER.

CONTENTS

	PAGE
I. PEARS' DICTIONARY OF THE ENGLISH LANGUAGE	3
Comprising nearly 20,000 words, with their Meanings and Pronunciation.

Pears' New Dictionary of the English Language

EXPLANATIONS.

Arrangement.—The words are given in alphabetical order.

Spelling.—The most current form of English spelling is adopted.

Meanings.—The most usual meaning is given first, with variants following where necessary.

Pronunciation.—The pronunciation is given after each word, the different vowel-sounds being indicated by marks over them. Thus—

ā is pronounced as in day, mate.
 â is pronounced as in at, fan, fad.
 ē is pronounced as in arm, father, half.
 ē is pronounced as in eve, me.
 ě is pronounced as in elk, mend.
 ê is pronounced as in where, there.
 î is pronounced as in ice, tide.
 ī is pronounced as in pin, pit.
 ï is pronounced as in machine.

ō is pronounced as in old, bold.
 ô is pronounced as in odd, pot.
 ō is pronounced as in storm, stork.
 ŭ is pronounced as in mute, tube.
 ū is pronounced as in up, tub.
 ū is pronounced as in burn, urge.

th soft as in forth.
 th hard as in then.

Consonant pronunciations are for the most part unvarying.

Vowel sound-signs are repeated for convenience at the bottom of each page.

The pronunciation of short simple words was not deemed necessary to be given.

Accent.—The accented syllable of a word is marked thus: ' on the pronunciation spelling.

Grammatical Classification.—Immediately after each word its grammatical classification is indicated by the following abbreviations:—

adj. adjective.
 adv. adverb.
 con. conjunction.
 excl. exclamation.

n. noun.
 prep. preposition.
 pron. pronoun.
 v. verb.

 Worldly, wérld'l, *adj.* pertaining to the world. [screw].
 Worm, werm, *n.* an earth-feeding animal; thread of a
 Worm, wér'l, *n.* trouble; vexation; *v.* to bite savagely.
 Worship, wer'ship, *n.* devotion; adoration.
 Wort, wert, *n.* a plant.
 Worst, werst, *adj.* the most wicked.
 Worsted, werst'ed, *n.* consisting of combed wool.
 Worth, werth, *n.* value; price.
 Wound, woond, *n.* an injury; *v.* to injure.
 Wraith, ráth, *n.* a ghost.
 Wrangle, rang'gl, *v.* to quarrel; to dispute.
 Wrangler, rang'gl-er, *n.* one who wrangles; one who
 achieves a first mathematical position at Cam-
 bridge University.
 Wrap, rap, *v.* to fold.
 Wrath, ráth, *n.* anger; fury.
 Wreath, réth, *n.* a garland.
 Wreck, rek, *n.* a destroyed ship; *v.* to ruin.
 Wrench, renc, *v.* to wrest.
 Wrest, rest, *v.* to force from.
 Wrestle, res'l, *v.* to contend with; to try to throw
 Wretch, rech, *n.* a miserable person. [down].
 Wrinkle, rig'l, *v.* to twist.
 Wring, ring, *v.* to twist; to strain.
 Wrinkle, ring'l, *n.* a crease.
 Wrist, rist, *n.* the joint connecting the hand with the
 arm.
 Writ, rit, *n.* a legal summons.
 Write, rit, *v.* to inscribe.
 Withe, rith, *v.* to twist; to be distorted with pain.
 Wrong, rong, *n.* injustice; injury.
 Wroth, róth, *v.* angry.
 Wry, ri, *adj.* twisted.

X

Xangti, zang'ti, *n.* the Chinese name for Supreme
 Xanthine, zan'thin, *n.* yellow dyeing matter. [Beig].
 Xanthous, zan'thus, *adj.* yellow.
 Xebec, zé'bek, *n.* a small vessel.
 Xema, zé'ma, *n.* a genus of guils.
 Xenium, zé'nium, *n.* present to a distinguished per-
 Xenodochy, zén-od'ók-ty, *n.* hospitality. [son].
 Xeraala, zér-á'la, *n.* a hair disease.
 Xerophagy, zé-róf-á-jy, *n.* habit of living on dry food.
 Xiphoid, zif-oid, *adj.* sword-fish shaped.
 Xylcarp, zif'lo-karp, *n.* a woody fruit.
 Xylography, zif-log'raf-ty, *n.* art of wood engraving.
 Xylophagous, zif-log'f-á-gus, *adj.* feeding on wood.
 Xylophone, zif-log-fón, *n.* a wooden musical instrument.
 Zist, zist, *n.* an athletic court.
 Zyst'er, zist'er, *n.* a surgical instrument for scraping

Y

Yacca, yak'a, *n.* a West Indian evergreen.
 Yacht, yot, *n.* a pleasure vessel.
 Yam, yam, *n.* a tropical root.
 Yammer, yam'er, *v.* to lament.
 Yankee, yang'ké, *n.* an American.
 Yard, yárd, *n.* a measure of 3 feet; an enclosed
 space; a ship's beam.
 Yardsick, yárd'sik, *n.* a stick 3 feet long.
 Yarn, yárn, *n.* spun wool, cotton, flax, or silk.
 Yarrow, yá'ró, *n.* an herb.
 Yawl, yawl, *n.* a ship's boat.
 Yawn, yawn, *n.* act of gaping; *v.* to gape.
 Yeau, yén, *v.* to bring forth young.

Yearling, yēr'ling, *n.* an animal a year old.
Yearn, yern, *v.* to desire eagerly.
Yolk, yolk, *n.* yolk.
Yell, yell, *v.* to utter a sharp cry.
Yellow, yel'ō, *adj.* of a bright gold colour.
Yelp, yelp, *v.* to bark shrilly.
Yoman, yō'man, *n.* a farmer; a freholder.
Yesterday, yer'ster-dā, *n.* the day last past.
Yew, yoo, *n.* an evergreen tree.
Yield, yēld, *v.* to produce.
Yolk, yolk, *n.* yellow of an egg.
Yoke, yōk, *n.* bondage.
Yoke-fellow, yōk'fel-ō, *n.* an associate.
Yokel, yō'kel, *n.* a country bumpkin.
Yonder, yon'der, *adv.* at a distance within sight.
Yore, yōr, *n.* ancient days.
Young, yung, *adj.* not long born; *n.* the offspring of.
Yule, yool, *n.* the old-time name of Christmas. [animals.]

Z

Zabra, zā'bra, *n.* a small Spanish vessel.
Zamia, zā'mf-ā, *n.* a genus of plants.
Zanella, zā-nef-ā, *n.* a twilled fabric for covering [umbrellas].
Zany, zā'nī, *n.* a buffoon.
Zax, zaks, *n.* a Slater's hammer.
Zaakēci, *n.* ardur.
Zend, zend, *n.* early Persian language. [the Parsees].
Zend-Avesta, zend-ā-vest-ā, *n.* the ancient writings of

Zenith, zen'ith, the highest point of the heavens.
Zephyr, zef'er, *n.* a gentle wind.
Zero, zē'ro, *n.* nothing; the point from which a thermometer is graduated.
Zest, zest, *n.* eagerness; relish.
Zigzag, zig'zag, *adj.* this way and that. [tery.
Zinc, zing'kōd, *n.* positive pole of a galvanic bat.
Zincography, zing'kōg'ra-fī, *n.* a process of printing from zinc plates.
Zither, zi'h'er, *n.* a flat-stringed musical instrument.
Zodiac, zō'dī-ak, *n.* imaginary inner circle in the heavens containing the twelve signs through which the sun travels.
Zole, zō'ik, *adj.* relating to animals.
Zone, zōn, *n.* a girdle; a division of the earth.
Zoography, zō'og'ra-fī, *n.* description of animals.
Zoolite, zō'ō-lit, *n.* fossil animal substance.
Zoology, zō'ō-lō-jī, *n.* the natural history of animals.
Zoophyte, zō'ō-fīt, *n.* a plant-like animal, as the sponge.
Zoospore, zō'ō-spōr, *n.* a spore capable of moving.
Zootomy, zō'ō-tō-mī, *n.* the anatomy of animals.
Zulu, zū'loo, *n.* an African Kafir race.
Zymology, zū-mō'lō-jī, *n.* science of fermentation.
Zygomate, zig-ō-mat'ik, *adj.* pertaining to the cheek.
Zygon, zi'gon, *n.* a connecting bar. [bone].
Zyme, zim, *n.* a germ supposed to cause sybotic disease; a ferment.
Zymotic, zi-mō'tik, *adj.* pertaining to fermentation.
Zythum, zi'hūm, *n.* a liquor made from wheat and malt.

THE BRITISH COINAGE.

The Standard Coinage of Great Britain consists of the following pieces, some of which are issued for special purposes (not for currency):—

Coin.	Standard Weight.
	Grams.
Gold:	
Five Pound Piece	616.73239
Two Pound Piece	246.54985
Sovereign	123.7447
Half-Sovereign	61.87235
Silver:	
Crown	436.75963
Double Florin	349.06900
Half-Crown	218.18181
Florin	174.54545
Shilling	87.27272
Sixpence	43.63636
Groat	29.09090
Three-penny Piece	21.81818
Two-penny Piece	14.54545
Penny	7.27272
Bronze:	
Penny	145.83113
Halfpenny	87.50000
Farthling	43.75000

Standard Gold Coinage in Britain consists of eleven-twelfths of fine metal and one-twelfth of alloy; fineness, 916.66. Twenty troy pounds of standard

gold are coined into 934 sovereigns and one half-sovereign. One troy ounce is, therefore, worth £17s. 10d. and one ounce of pure gold, £44s. 11d. The minimum weight at which a sovereign is allowed to remain current undischarged is 123.7447 grams; that of half-sovereign 61.87235 grams. Any person to whom it is tendered may break, cut, or deface any gold coin below the least current weight, but light gold coin which has not been illegally dealt with is received by the Bank of England on behalf of the Mint at its full face value.

Standard Silver comprises thirty-seven-fortieths of fine metal and three fortieths of alloy; fineness, 925. One troy pound of standard silver is coined into 66 shillings.

Bronze as employed in minting in the British Empire is an alloy of copper 95 parts, tin 4 parts, and zinc 1 part.

No person is permitted to coin any token to pass for, or as representing, any British piece of money under a penalty of £20.

Bank of England Notes are issued for sums of £5, £10, £20, £50, also for £100, £200, £500, and £1,000. The tender of Bank of England Notes is legal in England and Wales for every purpose; but no one can be compelled by law to give change. Gold, if above the minimum recognised current weight, is a legal tender to any amount. Silver is not a legal tender for sums over £5, nor bronze, including farthings, for beyond a shilling.

Treasury Notes of the value of £1 and 10s are now issued and are legal tender for any amount.

PEARS' DICTIONARY
of GENERAL
INFORMATION.

THERMOMETER COMPARISONS.

There are three Thermometers in common use: Fahrenheit's in English-speaking countries generally, Centigrade in Latin countries, Réaumur in Germany.

The only difference between them is that the three thermometers being placed in freezing ice and the position of the quicksilver being marked on the glass, and the same three thermometers then being put into boiling water and the height of the quicksilver marked at that point, the distance between the two points is divided into 180 parts by Fahrenheit, 100 parts in Centigrade, 80 parts by Réaumur.

Whereas in Centigrade and Réaumur freezing point is marked as "0," Fahrenheit marks his first degree at thirty-two degrees below freezing point, thus making 32° his boiling point.

The accompanying table will facilitate the conversion of one reading into another.

Readings of any one of these three scales can be converted into those of any other by the following rules:—

Réaumur to Centigrade	$\times 5 \div 4$
" to Fahrenheit	$\times 9 \div 4 + 32$
Fahrenheit to Réaumur	$- 32 \div 9 \times 4$
" to Centigrade	$- 32 \div 9 \times 5$
Centigrade to Réaumur	$\times 4 \div 5$
to Fahrenheit	$\times 9 \div 5 + 32$

Réaumur—Water solidifies	...	0°
Centigrade	0°
Fahrenheit	32°
" Sul-ammoniac	...	0°

Pears' Dictionary of General Information

TREATING UPON SOME 6000 DIFFERENT SUBJECTS
INCLUDING THE CHIEF MATTERS OF INTEREST IN

History, Science, Invention, Literature, Folk-Lore, Music,	Exploration, Ethnology, Commerce, Trade and Industry, Politics, Religion,	Education, Palaeontology, Economics, Navigation, Art,	Natural History, Geology, Architecture, Antiquities, Astronomy, &c.
---	--	---	---

NOTE.—*Biographical subjects of all periods are dealt with in the "Dictionary of Prominent People" section; information concerning domestic birds of the home and farm will be found in "Pears' Dictionary of Poultry and Cage Birds," and "Pears' Dictionary of Domestic Pets"; the "Indoor and Outdoor Sports and Pastimes" section comprises all that need be said in a comprehensive work of this description concerning such matters; while much other "General Information" is properly classified in "Pears' Dictionary of Health," "Pears' Dictionary of Gardening," "Pears' Dictionary of Cookery," "Pears' Office Compendium," "Pears' Dictionary of Motoring," and the various other specialised sections of this Cyclopaedia.*

Abacus, the upper portion of the capital of a column; also a contrivance for adding figures.

Abaddon, the angel of the bottomless pit—Apollyon, Satan.

Abatis, a military term signifying an entrenchment of trees placed side by side with the branches outwards.

Abbeville Treaty, the surrender, in 1296, by Henry III. to Louis IX., of his claims to Anjou, Normandy, and adjacent provinces.

Abbeys—monastic or conventual establishments governed by an abbot or an abbess—were among the earliest of Christian institutions, and were adopted in Western Europe under the Benedictines in the 6th and 7th centuries, spreading to such an extent that in 1215 no fewer than fifteen thousand and seventy abbeys had been established by this order alone. At Canterbury, Westminster, York, and other places in Britain the remains of Benedictine abbeys are still to be seen. The Cistercian abbeys are of later date, and well preserved examples are to be found at Fountains, Rievaulx, Kirkstall, Tintern, etc. From the dissolution of the Monasteries by Henry VIII. monasticism practically ceased in this country, and no further abbeys were built. The ruins of religious houses in England and Scotland are among the most interesting relics of former days.

Abdication. The term refers usually to the act of a sovereign who relinquishes the supreme power in a State. There is only one instance since the Conquest of the abdication of an English monarch, that of James II., in 1688. Among Continental nations there have been many. In France we have those of Napoleon I., Charles X., and Louis Philippe. The most notable abdications of the old Roman days were those of Sulla, B.C. 79, and Diocletian in A.D. 305.

Abduction is a term indicating generally the forcible carrying off of a woman either against her own will or the rights of her legal protectors, and is an offence that is severely punished as felony, and the abduction of an unmarried girl under sixteen is punishable as a misdemeanour even when there has been no intent of detention against the will of her parents or guardians.

Abecedarians, a small sect of Anabaptists of the 16th century, who got their name from their opposition to learning, even down to the A B C.

Aberdeen University, formed in 1860—as at present constituted—by the union of two ancient colleges dating back to the 16th century. It has a library of about one hundred thousand volumes. Along with Glasgow University, it has the privilege of returning one member of Parliament. Held its quatercentenary celebration in Sept., 1906.

Abiogenesis, a term invented by Professor Huxley to indicate the origination of living by not living matter. The abiogenesis theory supports that of evolution by tracing the organic into the inorganic.

Abolition of Slavery. (See **Slavery**.)

Aborigines is a term that was first applied to an ancient Latin race, but now signifies the original inhabitants of any country. The Maories of New Zealand and the Red Indians of North America represent two prominent existent examples. As regards the older nations, aboriginal evidences are difficult to trace.

Abraham-men, a term applied to such vagrants as simulate sickness, or "sham Abraham," as the saying is, especially among sailors. The designation is said to have been originally borne by a lunatic beggar from Bethlehem Hospital in London, marked by a special badge indicative of the Abraham ward of the hospital in which he had been confined. These itinerant mendicants were notorious for having enough wit, and for cunning, deceit and predatory proclivity.

Absinthe, an aromatic spirit much consumed in France, and made from a distillation of wormwood and other roots macerated in alcohol, and manufactured chiefly in Switzerland. Absinthe drinking is a great evil, destroying the power of the brain and ultimately inducing paralysis. Its use is prohibited in the French Army and Navy. Zola's novel "L'Assommoir" was a scathing indictment of the absinthe habit.

Abolution, an ecclesiastical term denoting the liberation of a person guilty of sin from its consequences by the act or intercession of religious authority. Now confined in its strict form chiefly to the Roman Catholic and Greek Churches, although a modified form is occasionally used in certain churches of the Anglican Communion.

Academy is a Greek term, originally applied to the groves where Plato taught, but subsequently

adopted to indicate higher educational institutions or a special kind. Academies of science are numerous in all parts of the world, and in addition there are what may be called Literary Academies, of which the French Academy, established in 1635, is a notable example. There are also Academies of History, of Medicine, of Music, and of Art. The London Royal Academy of Arts was founded in 1768, Sir Joshua Reynolds being its first president. The British Academy, for the promotion of historical, philosophical, and philological studies, was founded in 1902, and is incorporated by royal charter.

Acclimatisation expresses the process by which animals or plants are gradually inured to a climate other than that of their origin. It is a subject which has been deeply studied by scientists, more especially since the general acceptance of the Darwin theory of evolution. The results achieved have been marvellous in their effects and of great utility to mankind.

Acetic Acid, an organic acid usually obtained by the oxidation of tainted wines, the distillation of wood, or from the leaves of certain plants. Used in medicine, as a condiment, as a mordant, and in the preparation of varnishes, etc.

Acetylene, a powerful illuminating gas compounded of 2 hydrogens, 2 carbons, and 2 oxygens in water, will inflame spontaneously when brought in contact with chlorine, and under modern conditions of utilisation forms a beautiful illuminant.

Acids are compound substances which combine chemically with an alkaline or base and result in a new body that has neither acid nor alkaline properties. These resultant bodies are termed salts, and as many salts can be produced as there are basic substances to be neutralised. The range of acids is very great. The chief mineral acids are sulphuric, hydrochloric, and nitric, and are available of being utilised for an immense variety of commercial purposes.

Acolyte, one who assists the priest in the Roman Catholic service by lighting the candles and performing other minor duties.

Acoustics, the science of sound, whereby the various phenomena of sound waves are investigated. The experiments of Lord Rayleigh in recent years have added considerably to our knowledge of this subject.

Acrobats were originally rope dancers, and among the ancient Greeks and Romans this kind of performance was very popular. In modern days the term has had a much extended meaning, and includes performers in a variety of feats of strength and dexterity which were not practised by the ancients; thus, in the general term acrobats are included men and women who perform on the trapeze, the horizontal bar, etc.

Aerostic, a kind of verse which has afforded amusement to ingenious triflers from very ancient times, and consists of a composition so arranged that the initial letters of the lines, read consecutively, form certain names or words.

Actinosea, a marine group of animals of the Sea-Anemone class.

Act of Settlement. (See **Settlement, Act of.**)

Act of Uniformity. (See **Uniformity Act.**)

Actor Knights. In recent times actors have received more recognition by the State than in former days, and the old stigma of vagabondism no longer applies to the stage as a profession. From the Restoration downwards prominent actors and actresses have been more or less honoured, but it is only within recent years that titles of rank have been conferred upon eminent actors in England. The late Sir Henry Irving and the living Sir Charles Wyndham, Sir Squire Bancroft, Sir John Hare, Sir H. Beerbohm Tree, Sir George Alexander, Sir A. W. Pinner, and Sir J. Forbes-Robertson are among celebrities of the British Stage who have received the accolade. Sir Augustus Harris, the Drury Lane manager of a former decade, and his knighthood to his civic services rather than to his professional prominence.

Actresses who have married men of title. One of the most notable examples was that of Miss Mellon, who early in the last century first married Countess the banker, and afterwards the Duke of St. Albans, and

bequeathed her portion of the Countess's wealth to the late Baroness Burdett-Coutts. Then there was Miss Farren, who became Countess of Derby; while in more recent days there have been the marriages of Miss Connelie Gilchrist with the Earl of Orkney, Belle Bliton with the Earl of Clancarty, and many others. It may, in connection with the word "actresses," be noted that prior to the Restoration of Charles II., female parts in plays presented on the English stage were performed usually by boys, as was the rule in Shakespeare's day.

Acts of Parliament comprise public Acts which are binding on all citizens, and private Acts which refer to particular persons or places. Although the Magna Charta may be said to have initiated the English Statute Book, it was not until the time of Edward I. that Acts of Parliament came to be in any sense general. Acts of Parliament were not printed until the reign of Richard III., and they were not printed in English until the fourth year of Henry VII. The first authorised edition of English Acts of Parliament was published between 1810 and 1824. Scotch Acts date back to 1292, and Irish Acts to 1310.

Adamites, a sect of religionists who claimed to restore Adam's original condition of innocence, and rejected marriage. The sect had its origin in North Africa in the second century, and in medieval times there were Adamites in Germany, but they were soon exterminated, many of them being sent to the stake.

Adder. (See **Viper.**)

"Added Parliament." James I.'s second Parliament, called together in 1614, and dissolved without legislating.

Adulteration is the act of mixing an inferior substance with a superior one for the sake of greater profit, a practice much resorted to in former times. During the last half century, however, many stringent laws have been passed for the prevention of adulteration of food, drink, and drugs; but, in spite of all the legislation, considerable covert sophistication of articles in public demand still prevails, some of the later discoveries of science having been utilised for assisting adulteration. The appointment of public analysts in all the leading cities and towns, with power to collect samples for analysis, has had a very salutary effect, though there still remains much to be done in this direction.

Advent, a period devoted to religious preparation for the coming celebration of the Nativity (Christmas). It comprises four Sundays, and commences on the one preceding or following St. Andrew's Day (Nov. 30), or on St. Andrew's Day itself. Advent was not observed before the fourth century.

Advertisement is a public notification appearing in the Press or in some other public form. It was not much indulged in before the 19th century, was well advanced, although the first advertisement published in England dates back to April, 1647, when the merits of a book called *The Divine Right of Church Government* were briefly set forth in a newspaper of the time. To-day, if it were not for the revenue derived from advertisements, few newspapers could exist, and certainly they could not be the important and influential organs that they are. From the *Times* downwards, they owe their success to this form of publicity. The development has been largely due to the enterprise of great advertising firms, and partly also to the universal recognition by the public of advertisements as the best guide to shopping of all kinds. Thus it has become one of the most effective business factors. In these days advertising is for the majority of businesses as necessary a department of commercial organisation as that of procuring the goods advertised. Advertising in its higher form has had a considerable educational influence upon the public, as evidence of which it is only needful to recall the many superb art productions which Messrs Pears and others have put before the public by means of advertising both in the newspapers and on the hoardings. Messrs Pears paid £2,000 for the famous "Bubbles" picture by the late Sir J. E. Millais, P.R.A., and the same

firm have similarly popularised works by Stacy Marks, R.A., and other eminent artists. One of the latest developments of Messrs. Pears was to place actual paintings of large size on the hoardings. An Act of 1906 conferred on local authorities powers of controlling hoardings used for advertising when they exceed twelve feet in height, and prohibited the display of advertisements in such places in a manner detrimental to the beauty of a landscape.

Advocatus Diaboli ("the devil's advocate"), a Roman Catholic functionary who presents opposing evidence in regard to the life of any deceased person it may be proposed to canonise.

Adwoson is the right of presentation to a vacant Church benefice, and is capable of being sold or mortgaged. By far the greater majority of advosons are in the hands of private persons; the rest are under the patronage of the bishops, deans, and chapters, universities, and the Crown.

Aelian Harp is a musical instrument now not much used, but formerly in considerable favour. It consists of catgut stretched over a wooden sound-box which, when placed so as to receive a controllable current of air, can be made to emit many pleasing harmonies.

Aerated Bread is made by special process in which carbonic acid gas is used instead of yeast. In London there are numerous restaurants promoted by the exploiters of this principle, which has achieved considerable popularity.

Aerated Waters are manifestly true in great variety. All have their origin in the introduction of carbonic acid or other gaseous ingredient into the water by pressure; and, by special subsequent treatment, assume the form in which they are sold, including lemonade, ginger beer, mineral water, soda water, seltzer, lithia, etc., the flavouring being an important element of production.

Aerial Navigation has developed at an amazing pace since the outbreak of the Great War; under the stress of practical war-service every class of aircraft has been tested, and our knowledge of the comparative utility of the various machines of the belligerent countries has been greatly extended. At the outbreak of hostilities Germany had 470 aeroplanes and 24 airships, France 500 aeroplanes and 24 airships, Russia 200 aeroplanes and 7 airships, Austria 12 aeroplanes and 4 airships, while Great Britain had only 130 aeroplanes and 5 airships. Immediately after the declaration of war there was a tremendous spending up, notably in connection with the British Army, and some of the chief successes in war aviation have been won by our airmen. The mobility of our aircraft, mostly biplanes, and the daring of the men who have handled them have been marked features of the struggle. Month by month this service has been augmented in numbers and efficiency, furnishing valuable information to our generals at critical moments, and making successful raids in many directions. Germany has not succeeded in its threats with its military aircraft. There have been Zeppelin raids upon unfortified towns and quiet country places, and also upon big cities and towns, but the total result of damage must be disappointing to the German war leaders. The French air-fleet has proved itself as generally competent for its work as it has been brilliant in its special feats. Austria's air work has not been exceptionally notable. After the great object lesson provided by the war the whole science of aviation must emerge with expanded ideas, costly mistakes must be remedied, and improved methods followed. Considering the hazard of the service, the aviation fatalities during the war have been small. Seventeen different makers of aeroplanes have delivered an average of four machines a week since the war broke out.

Aerolite, the name given to meteoric stones which sometimes fall from the sky to the earth. These substances usually contain a large proportion of iron, and many have been of great weight and dimensions. Pliny mentions one that was as large as a wagon, and there is a record of one weighing 370 lb. having fallen at Eilsheim, in Alsace. The

British Museum contains a notable collection of these "stony-stones from the sky."

Aeroplane. (See **Aerial Navigation**.)

Aesthetics concerns itself with the science of the beautiful, and is applied not only in the field of art, but in connection with metaphysics and science. From the days of ancient Greece to the present time there have been ardent followers of aesthetics, and many systems have been evolved. Among modern writers on the subject may be mentioned Ruskin and Herbert Spencer in England, the two Schlegels in Germany, and Taine in France. Mr. Spencer set up a hierarchy of æsthetic pleasures from the lowest to the highest. The theories of "the Beautiful" will always remain a fascinating study to refined minds.

Æstivation, the period of summer quiescence or sleep, corresponding to hibernation, which certain tropical animals and plants undergo during the extreme heat.

Affidavit is a written or printed statement of facts to which a deponent makes formal oath before a judicially qualified person. Most attorneys are commissioners for administering oaths.

Affirmation is a declaratory tale in lieu of an oath by persons objecting to be sworn because of religious or other scruples. Perjury applies to affirmations the same as to oaths.

Afforestation. (See **Forests**.)

Afridis, a warlike race of hill-men on the north-west frontier of India. It was against a branch of this race—the Zakkia Khel—that a successful British punitive expedition under Sir James Willcocks was despatched in February, 1908, to exact redress for a long series of looting raids.

Afrikaander, a name usually given to the South African Dutch, but rightly applied to all African-born whites.

After-damp is a mixture of carbonic acid and nitrogen that occurs in a mine after an explosion and causes suffocation to human beings. It is also called "choke-damp."

Agape, a "love-feast" held by the early Christians, in commemoration of the Lord's Supper. Commended by the Council of Carthage, 397, but revived in recent times in a modified form by Moravians and some Methodist.

Agapomone, the title given to a so-called religious society founded in 1845 by H. J. Prince, at Charrinck, near Bridgewater, which has attained some notoriety in recent years. It is a sort of "free love" commune, unattached to any recognised sect.

Agar-agar, a vegetable gum obtained from seaweeds, and largely employed in the Orient in the composition of soups and jellies.

Agate, a variegated stone composed of nearly pure silica. Germany, Brazil, and India furnish the main supplies, and Scotland has a species of agate called Scotch pebble.

Agave, the American aloë, which sometimes does not attain to flowering maturity under sixty or seventy years, and then dies.

Age is a term of wide application and has been variously used at different periods. In classical mythology five successive ages or races were defined—the *golden* or primitive, when a simple enjoyed unalloyed happiness without labour and lived on the fruits of the earth; the *silver*, when the worship of the gods was neglected; the *brass*, which was warlike and violent; the *heroic*, when the gods and semi-gods held sway; and the *iron*, representing the lowest point of human degradation. Hesiod and Ovid both retain this classification. In later times the ages group themselves round some pre-eminent, dominating personality or characteristic; thus, we have the age of Pericles, the Augustan age, the Elizabethan age, the dark ages, the middle ages, the steam age, and so forth. Then there are the geological ages—classifying the ages according to the evidences of the various strata. Archaeologists divide the pre-historic periods into the Stone, Bronze, and Iron Ages. As regards individual life, age has its four main divisions of infancy, youth, manhood, and old age; these again are often subdivided. Shakespeare

gave us his "Seven Ages"; Keats adopted the four seasons classification. According to British law, a man or woman is of age at 21.

Agonistes, an obscure sect of seventh-century ascetics who made pretence of special sanctity and suffered condemnation by the Council of Epina.

Ahania, an asteroid found by the astronomer Luther, in 1857, and so called because of its brilliancy.

Aguel, an old French gold coin, worth 12 sols 6 deniers, and first struck temp. St. Louis. The appellation was due to the figure of the *Agnus Dei* (Lamb of God) on the obverse.

Agnosticism, a term first used by Huxley in 1869 to denote the theory that beyond our personal knowledge of phenomena all is uncertainty. This was his own attitude towards spiritual things. Agnosticism neither denies nor affirms the existence of God.

Agnus Dei (Lamb of God), the name of a Roman Catholic prayer; also forms part of the Gloria in the Anglican communion service.

Agony Column, the portion of a newspaper devoted to advertisements of a secret or personal nature.

Ahriman, the Zoroastrian spirit of destruction.

Air is a mixture of gases forming the atmosphere we breathe. Its constituents are reckoned in 1000 volumes of air, 206's of oxygen, 779's nitrogen, 14 aqueous vapour, and 0 a carbonic acid gas. Beyond these are found traces of nitric acid, ammonia, and particles of solid matter. The height of the atmosphere is supposed to be about 40 miles. It is the oxygen of the air that maintains life.

Air-gun, an instrument for firing projectiles by means of compressed air, but hitherto of little practical use. In recent years the United States Navy has experimented with an air-gun of large calibre, called the "dynamite gun," but it has not yet been adopted to any particular extent.

Air-pump. This ingenious contrivance was invented in 1650, and consists of a receiver, from which the air is to be exhausted, and a pump, which is a brass cylinder with a piston in it, for drawing off the air. The air-pump has been of great utility in scientific experiments, and its governing idea is applied to the condensing steam-engine for drawing away the commingled air and aqueous vapour from the condenser and casting them off well.

Air-ship. (See *Aerial Navigation*.)

Akka, a race of pigmies inhabiting the territory between the rivers Aruimi and Nepopo, in Central Africa.

Alabama Claims were claims for compensation made by the United States against Great Britain for damage done to American shipping during the Civil War by the *Alabama* privateer, built by the Lords of Liverpool for the Confederate service, and commanded by Captain Semmes. After doing damage to American commerce the *Alabama* was finally sunk off Cherbourg by the *Kearsage*, of the U.S. Navy. The U.S. Government charged Great Britain with breach of neutrality, and made a formal claim, which was decided by arbitration at Geneva in 1872, the Court giving a verdict for the claimants (in respect of the *Alabama* and two other ships) for over £3,160,000.

Alabaster, a soft, crystalline form of sulphate of lime, or granulated gypsum, easily worked for statuary and other ornamental articles, and capable of being highly polished. Solterra, in Tuscany, yields the finest; that in highest ancient repute came from Alabastron, in Egypt, near to the modern Antioch.

Alais, Treaty of, 1601, whereby, after the taking of La Rochelle, the Huguenots submitted to Richelieu, and the long religious conflicts between the Catholics and Huguenots were for a time ended.

Al Araf, the mid-heaven of the Koran, where those whose deeds have been neither decidedly good nor very bad, spend their after-life.

Albatross, a large white ocean bird whose wings measure from ten to twelve feet when outstretched.

Albert Medal (a), a medal of the Society of Arts, given to scientific men, inventors, etc.; and (b) a medal awarded for gallant deeds in saving life on sea or land.

Albert Memorial, a large Gothic monument designed by Sir Gilbert Scott, and embellished with sculptures by eminent artists. Erected in memory of Prince Albert in Kensington Gardens at a cost of £120,000.

Albigenses, a small religious sect who in the 12th century, at Albi, in France, opposed the papal rule, but were ultimately put down by Innocent III.

Albino, a term first applied to designate certain white negroes which the Portuguese navigators met with in Africa. It is now used in regard to all persons of white skin and hair and pink eyes. Albino cannot see well in the sunlight; it is only in semi-darkness that they discern objects clearly. The albino peculiarity is also found in other living creatures besides man.

Al Borak, a winged being on which Mahomet was credited with having travelled through the heavens.

Album, a term now used for a book of photographs, autographs, or other collections, but originally applied to the tablets on which public decrees, edicts, etc., were inscribed in ancient Rome. In mediaeval times the word was used to designate lists of various kinds.

Albumen, a substance essential to the building up of the animal organism. The white of an egg shows it in its purest form. It coagulates under heat, or by the action of acid or alcohol, and is further capable of soluble or insoluble modifications. It provides an anti-toxin in corrosive sublimate poisoning.

Alcalde, a Spanish mayor, judge or magistrate, or in Portugal a justice of the peace; not to be confounded with the similar word "alcade," which signifies the keeper of a castle or prison along both shores of the Mediterranean. The latter is a military term, the former signifies always a civil functionary.

Alcazar, the famous palace at Seville, now owned by the monarchs of Spain, but in ancient days the residence of the Moorish kings.

Alchemy was from the 12th to the 17th century regarded by many philosophers and enthusiasts as a science capable of demonstration in the production of one or other of three supposed chemical combinations—the philosopher's stone, which was to transmute the baser metals into gold; the elixir of life, that was to prolong existence indefinitely; and the alkali, or universal solvent. Men of great attainments, monarchs, ecclesiastics, and all classes of people dabbled in alchemy; lives were given up entirely to it, fortunes were wasted upon it. Geber, Roger Bacon, Albertus Magnus, Paracelsus, and many other men of note were devoted alchemists. The experiments of the alchemists, however, in spite of their being directed towards an impossible end, resulted in many discoveries that were of value to the real science of chemistry.

Alco, an American dog, native of Mexico and Peru, and resembling the variety of the canine family commonly employed in Britain by shepherds. It is long furred, arched in the back, small-headed, and has a short drooping tail. The colours most prominent are yellow and white, and the animal is tractable and held in considerable esteem.

Alcohol is a chemical combination of carbon, hydrogen, and oxygen, and is produced in its pure state by the distillation of fermented liquors. It is used in the manufacture of a variety of products, such as chloroform, ether, perfumes, etc.; its most general use, however, is in imparting a stimulative action to liquors, rendering them so intoxicating effect upon consumption in sufficient quantity. When diluted with 10 per cent. of wood spirit, alcohol becomes "methylated spirit," and in that condition can be used for numerous industrial and chemical purposes, and is largely exempted from duty.

Aldebaran, a star of the first magnitude, commonly known as the Bull's Eye, being in the constellation of Taurus.

Aldehyde, a product of the oxidation of alcohol and other liquids when exposed to the air turns into vinegar. Discovered by Liebig.

Alderman, a title first instituted by the Saxons and given to governors, magistrates, etc. Afterwards

adopted to designate the higher section of a municipal corporation.

Aldine Editions are the books printed in Venice by Aldus Manutius and his family between 1490 and 1597, and are remarkable for the beauty and accuracy of their typography. Italics were first introduced in these books.

Ale. (See Beer.)

Alambique, a vessel formerly much used in distillation, but now generally superseded by retorts.

Alexandrines are stanzas, each line of which contains twelve syllables—six measures.

Alga is the name of a variety of aquatic flowerless plants of which seaweed is a leading example. They are classed in two main divisions—marine and freshwater alga.

Algalat, an antelope found in Nigeria and the Gambia country; it is of good size, with horns a yard long, annulated in the lower half.

Algebra, a branch of mathematics in which symbols are used in place of numbers. Sir Isaac Newton styled it the "universal arithmetic."

Algol, a double star of the Perseus constellation, situated in the head of Medusa.

Alhambra, the ancient palace of the Moorish kings near Granada, built in the 14th century, and remarkable for its architectural beauty.

Alina, a Latin term signifying "otherwise," and used in legal proceedings to indicate the assumption of a false name or names.

Alibi, signifying "elsewhere," is the plea of a person who desires to prove that he was at some place away from that he is charged with having been at when a particular offence was committed.

Aliens are persons of foreign birth residing in a country and unaturalised, and not entitled to the ordinary privileges of a native subject. Owing to the influx of undesirable immigrants to this country legislation of a partly prohibitive character was adopted by the Aliens Act of 1905, which refuses admission to criminals, prostitutes, and other objectionable classes. After five years' residence an alien can be naturalised in Britain. After the outbreak of the war, in 1914, when all unaturalised Germans and Austrians remaining in Great Britain became alien enemies, thousands were interned, and all were required to register and report themselves at short intervals.

Alimony, an allowance to a married woman legally separated from her husband, fixed by law, and paid by the husband.

Alizarin, the chief colouring matter of madder; heated with zinc dust, it is converted into anthracene.

Alkali, the general name given to a number of substances which are the opposite to acids in their chemical action. The term is commonly applied to soluble alkaline bodies, the principal of which are potash, soda, litmus, aqueous ammonia, lime, baryta, and strontia. The action of these bodies on animal and vegetable substances, and they are extensively used in producing various colouring matters.

Alie, the Swedish name of the little auk, or black and white diver, commonly called in North Britain the "Rottie." To our shores it is a winter visitor only.

Allegiance is the attitude and expression of loyalty of a subject to a ruler. Ordinarily, it is only implied, but in the case of those fulfilling offices or functions of State is confirmed by the Oath of Allegiance.

Allegory, a narrative or discourse couched in figurative language and intended to point a moral. A leading example is Bunyan's *Pilgrim's Progress*.

Alligator, the crocodile of America, common in the lower Mississippi and adjacent lakes and marshes, varying in length from two to twenty feet.

Alloys are combinations of inferior and superior metals. Our coinage contains alloy. In a sovereign there are twenty-two parts of gold and two of alloy; and silver coins contain about one part of alloy to eleven of silver. The alloys best known are brass, composed of copper and zinc; German silver, of copper, zinc, and nickel; pewter, of tin and lead; bell-metal, of copper and tin. When mercury forms part of an alloy, it is termed an amalgam.

All Saints' Day (Nov. 1) is common to both the

English and Roman Catholic Churches, and is in commemoration of the saints generally, or such as have no special day set apart for them. Instituted by Pope Boniface IV. early in the 7th century, this ecclesiastical festival was formerly called "All Hallows."

All Souls' Day (Nov. 2) is a festival of the Roman Church, intended for the mitigation by prayer of the sufferings of souls in purgatory. The commemoration was enjoined by Abbot Odlon of Cluny during the 11th century upon the monastic order over which he presided, and was afterwards adopted generally throughout the Roman Communion.

Allspice, a flavouring obtained from a West Indian tree of the myrtle order, *Pimenta officinalis*. The essential oil of its unripe fruit is a powerful irritant, and the bruised berries are carminative.

All the Talents Administration was so called because of its being a coalition of the best men of the two political parties, formed on the death of Pitt, in 1806, by Lord Grenville.

Alluvium, accumulations of sand, mud, gravel, etc., washed down by rivers and forming distinct deposits.

Allylene, a colourless, foul-smelling gas, obtained by the action upon bromopropene of sodium ethylate. It burns with a smoky flame, and yields a yellow flame.

Almack's, a fashionable room of assembly in St. James's, built in 1795, and for many years the scene of balls and society functions.

Almanac, a calendar of the year, with particulars of days, weeks, and months, the position of the sun and moon, tidal information, records of festivals, fairs, etc. Almanacs date from the latter part of the 15th century. The first English almanac was issued in 1493. Almanacs are of numerous special varieties. Up to 1894 they were subjected in this country to a stamp duty of 1s. 6d. per copy. "Old Moore's Almanac," a popular penny issue, with horoscopes, predictions, etc., has for a lengthy period circulated largely.

Almond, the fruit of the *Amygdalus communis*, indigenous originally to Persia, Asia Minor, and parts of North Africa. There are sweet and bitter almonds, the former being a favourite edible, the latter containing prussic acid.

Almoner was a monastic official charged with the distribution of alms. There was also the King's Almoner, and the title of Hereditary Grand Almoner still survives, though not involving any duties.

Almuce, a covering worn on former days by ecclesiastics while celebrating the Liturgy, and the originator of the "mortar-boards" still in vogue at certain schools, colleges, and cathedrals.

Aloe, a large plant of the lily-wort genus, growing naturally only in warm climates, and yielding by evaporation a purgative substance of great bitterness. In its habitat it flowers every eight years.

Alotoclas, a genus of fish of the loach family, one of the most notable varieties of which is the thresher, or fox-shark.

Alpaca, a South American ruminant whose wool is woven into a soft dress fabric known by the same name. The late Sir Titus Salt was the first manufacturer of alpaca cloth, and the industrial town of Saltaire, near Bradford, remains to evidence the success which for many years attended the enterprise. Many attempts have been made to acclimatise the alpaca goat in England, but with little success.

Alpenglow, the peculiar evening atmospheric condition observable at times in Alpine regions.

Alpha and Omega, an expression incorporating the first and last letters of the ancient Greek alphabet, and used to convey the idea of the beginning and end of anything—the whole of it.

Alphabet (so called from the first two letters of the Greek alphabet—alpha, beta) is the term applied to the collection of letters from which the words of a language are made up. The Phœnicians are credited with the first adoption of an alphabet. The Chinese have no alphabet, but signs which convey ideas. The Sanskrit alphabet comprises 40 letters.

Alpine Climbing has a perennial fascination for the adventurous of both sexes, and the "Alpine Club,"

founded in the interests of British travellers in this famous mountain region in 1858, has done much to encourage and facilitate the ascent of difficult and forbidding peaks. Mr. Edward Whymper and others reached the summit of the Matterhorn (14,625 ft.) in July, 1865; but four of the party were killed in the descent. Since then this dangerous climb has been negotiated without accident by ladies and gentlemen, both with and without guides, on numerous occasions, though against this there are several fatalities to set. Mr. H. O. Jones, lecturer at Clare College, Cambridge, and his wife were killed while climbing the Aiguille Rouge de Pentéret above the Frenay Glacier on August 15, 1912. Alpine climbing will never, however, lose its charm to certain minds. Our greatest authority on the subject is the Rev. W. A. B. Coolidge, an Anglo-American cleric who has scaled almost every point in the course of nearly a thousand separate climbs since 1870. Prof. Tyndall was a noted mountaineer.

Alcatraz, a district of Whitefrans, London, which was for a long period a recognised sanctuary for debtors and criminals, where they could not be captured. It was abolished in 1697.

Altar, originally a table or elevated place upon which sacrifices were offered, and still symbolically the place of sacrifice in Roman Catholic churches. In English churches the communion table is the altar.

Altimeter, an instrument designed for the compilation or measurement of altitudes trigonometrically.

Altitude, an astronomical term, signifying the angular elevation of a heavenly body above the horizon, true or apparent—that is, as it appears to the eye, or as the result of calculation. The observation may be made with quadrant or sextant.

Alto-Relievo, a term applied to sculptured designs which are designed in prominent relief on a flat surface, technically signifying that the projection exceeds one-half the true proportions of the objects represented. Basso-relievo is carving kept lower than one-half such proportionate projection.

Altruism, a term invented by Comte to denote devotion to the welfare of others, the opposite of Egoism.

Alum is a compound salt used in various industrial processes, especially dyeing, its constituents being sulphuric acid, alumina, an alkali, and water. The nature of the alkali introduced gives it its distinctive character, so that there are potash alum, soda alum, and ammoniac alum.

Alumina is the oxide of aluminium, and is used as a basis for fine pottery.

Aluminium is a constituent of alum and forms a white metal of a very pliant nature, admitting of its being utilised for a variety of purposes. It resists the action of the air, is impervious to nitric acid, and its conductivity is about one-third that of silver. It alloys with most metals.

Aladava, a small bird occurring in the Indian Archipelago, brightly coloured and active, kept sometimes by the Bengali baboos for fighting together.

Amalgam is the term applied to any alloy of which mercury forms a part.

Amazons, the women of an Indian tribe on the banks of the Marañon, in South America, who assisted their husbands in resisting Spanish invasion; also the female warriors of any land, such as the Amazons attached to the army of the King of Dahomey.

Amber, a brittle resinous substance of vegetable origin, obtained mostly from the Baltic coasts, and used for ornaments, pipe mouth-pieces, etc.

Amblygria is a variegated inflammable substance produced in the intestines of the cachetot or spermaceti whale, and generally found floating on the sea. Is a valuable perfumery material, and is used in the East for flavouring purposes.

Amblycephalus, a genus of homoptera including the froth-fly, which is destructive in many hop gardens in July and August, sucking the sap from the vine.

Amblyopis, a species of fish, practically sightless, and with insipid organs of hearing and feeling, that inhabit the Mammoth Cave of Kentucky. A remarkable illustration of the failure of senses not brought into use.

Ambulance, an ambulating hospital, for affording surgical aid to persons wounded in battle. The term is also applied to vehicles for conveying injured or sick persons to hospitals if populous places, a service of this kind being now provided in most cities and towns. An Ambulance Corps is part of a regular army equipment. The French were the first to adopt ambulances.

Ambuscade is a military manoeuvre by which troops are ambushed for a surprise attack upon an enemy.

Ameer, an Indian title of high nobility signifying "noble of nobles," "lord of lords." Hyderabad and other Oriental States now included in our Indian Empire had their Ameer, and the native head of Afghanistan still holds the distinction.

America Cup, a prize trophy first offered in 1851 by the Royal Yacht Squadron and open to yachts of all nations. It was won in the first year by the "America," a New York yacht, and has remained on that side of the ocean ever since, despite several attempts to recapture it by Lord Dunraven, Sir Thomas Lipton, and others. Sir Thomas was challenger for 1914, but war made the contest impossible.

Amethyst, a variety of precious stone of violet-blue or purple colour, occurring in crystals and greenstone rocks, and fairly abundant in Brazil. Some parts of Scotland yield an amethyst. Once supposed to be a charm against drunkenness.

Amianthum, a plant of the Melanth genus, called in America "Fall Poison," because of the notion that cattle feeding on its foliage in autumn would suffer ill effects.

Amice, a linen vestment worn about the neck by Roman priests under the alb when officiating at Mass; also assumed by some Anglican ritualistic clergy-men. Formerly worn on the head by priests and pilgrims.

Amiens, Treaty of, signed by England, France, Spain, and Holland in 1802, brought the War of the French Revolution to an end, and great were the rejoicings at the prospect of a long peace. Fresh cause of quarrel was soon found, however, and Napoleon resumed the warfare, which only ended with Waterloo.

Ammonite, an earthy powder, scarlet of hue, found in the mines of Chili, and considered to be an admixture of chalcant, ammonite of copper, and certain other ingredients.

Ammonia, a colourless gaseous compound comprising three atoms of hydrogen to one of nitrogen. It is obtained from various sources, but formerly was made by heating the horns and hoofs of deer, acquiring the name of spirits of hartshorn. The ammonia of commerce is now produced by coal decomposition in the course of gas making.

Ammonites, the name of extinct snail-like animals which inhabited coiled shells of beautiful design. Their fossils are found in the secondary system of rocks.

Ammonium, the basic radical of ammonium salts, a compound of hydrogen and nitrogen.

Amnesty, an act of grace by which a ruler or governing power pardons any body of political offenders. It is usually absolute, as when George II. proclaimed a general pardon to those who had been concerned in the second Jacobite rebellion; but it may be partial, as when it excepts certain specified persons from its operation, as Napoleon excepted several men from his amnesty on his return from Elba.

Amoeba, a minute form of life, gelatinous, without rudiments, of the lowest organisation, and only discernible through the microscope. Abounding in fresh and stagnant waters.

Amorphism, a term used to indicate the absence of crystalline form in any body or substance.

Ampere, the recognised unit of measures for electric currents.

Amphibia, a class of vertebrate animals possessing structural peculiarities common to both reptiles and fish, enabling them to live either in water or on land. The most familiar examples of the class are frogs, newts, and toads.

Amphitheatre, a term first used by the Romans to

denote the buildings set apart for gladiatorial and wild beast exhibitions. The Colosseum, which held nearly 50,000 persons, covered an area of about five acres. The ruins of this gigantic structure form one of the finest relics of ancient Rome. There were numerous other amphitheatres in different parts of the Roman Empire, including two or three in Britain, and the term is still frequently applied to buildings where exhibitions are given.

Amphitherium, a genus of fossil mammalia found in the lower oolite in Oxfordshire, and so called because of the difficulty it presented to scientists in attempting its classification.

Amphora was a large clay vessel used by the Romans for preserving wine, fruit, oil, etc.

Amulet, a necklace or other ornament worn as a charm against evil and much used in former times in England. Still common in the East.

Ana, a word used to describe any collection of criticisms, observations and opinions regarding a particular person. Modern examples: *the alphonse*, *Racineana*.

Anabaptists, a sect that came into prominence during the Reformation period. John of Leyden was one of their leaders, but his murder was their chief object. They committed many acts of violence under the cloak of religious zeal, but their operations were mainly confined to Germany. They are not to be identified in any form with the English Baptists.

Anabasis, Xenophon's narrative of the exploits of Cyrus the Younger against his brother Artaxerxes of Persia, 401 B.C. The title also of Arrian's history of Alexander the Great's expedition to Asia.

Anachronism, a confusion of dates and events, as when an allusion is applied to illustrate a period to which it does not properly belong. To represent persons of the 18th century riding in railway trains would be an obvious anachronism.

Anacoluthon is lack of grammatical sequence in speaking or writing.

Anaconda, a large Ceylonese snake, powerful, finely marked, and much feared by animals and the islanders of its habitat.

Anagram is a literary exercise which consists in using the letters in a given word or phrase to form a different word or phrase.

Analogy, a method of argument whereby an inference is drawn from one set of facts and applied to another to which it has some resemblance.

Analysis is the process by which a complex thing is reduced or broken up into its original elements. Qualitative analysis reveals the presence of certain substances, quantitative analysis shows those substances in their respective proportions. Analysis as applied to Grammar, Mathematics, and Logic resolves phrases, propositions, and arguments into their separate parts.

Analysts, Public, are chemists officially appointed to analyse all such food and drugs as are submitted to them by inspectors within their own area. Every town of importance has its public analyst, whose official work in protecting the body politic against adulteration and impurity is highly important.

Anarchism is a communistic propaganda, in which revolutions and violence have a prominent part. Britain has harboured many foreign anarchists from time to time, but anarchist organisations do not find much to work upon here. In Russia, Germany, Italy, and the United States there is a strong undercurrent of anarchism, as we are occasionally reminded by assassinations of prominent personages. Among the murders committed by anarchists since Alexander II. was assassinated in 1881, those of President Carnot in 1894, the Empress of Austria in 1898, King Humbert in 1900, President McKinley in 1901, the Grand Duke Sergius in 1905, and the King and Crown Prince of Portugal in 1908, are the most conspicuous. There are many anarchists, however, who do not countenance violence except in an organised revolutionary form. Her Most, Prince Kropotkin, Karl Marx, Reclus, and other propagandists differ greatly in their anarchistic theories, though all aim at the destruction of class rule and the establishment of a free society.

Anathema was the Greek term for things dedicated to the gods, and in its modern religious use indicates unserved offerings to God and sacrifice. Anathematization in the Roman Church is the extreme form of excommunication.

Anchor, an instrument used for keeping ships stationary. Great improvements have been introduced in recent years, stockless anchors being now chiefly used, consisting of a shank, a fast fluke, and a loose one. Many anchors are now made of cast steel.

Anchorite is a term applied to a religious person who retires into solitude to employ himself with holy thoughts. Among the early Christians, anchorites were numerous, but in the Western Church they have been few. Their reputation for wisdom and prescience was high, and kings and rulers in old days would visit their cells for counsel before undertaking any hazardous expedition. An anchorite or "unket" was in medieval times a source of fame and profit to the monastic house within which he was voluntarily immured.

Anchorovy, a fish of the sprat order, plentiful in the Mediterranean and along the Atlantic coast, and caught off the Devon and Cornish coasts in winter. Much esteemed when cured, but sprats are often put on the market as anchorovies.

Andrographis, a genus of plants of the *acanthus* order, yielding a bitter tonic, a good deal employed in India in dysentery treatment.

Anemometer, a wind-measuring instrument, now in general use at all meteorological stations, and in its more recent developments by Mr. Beckley, of the New Observatory, and others, is capable of recording the force and variations of the wind with accuracy.

Anemoid is the name given to the modern barometer, which is on a different principle from the mercurial barometer, and consists of a metallic box, exhausted of air, having a fluted lid on which the atmosphere presses, acting upon levers which indicate on a dial every atmospheric movement.

Angel, a gold coin, formerly current first in France and then in England, of value variant from 6s. 8d. to 20s. The coin bore a representation of the Archangel Michael in conflict with a dragon. The last English noble was coined in the reign of Charles I.

Angelica, an aromatic plant of the umbellifera order, valuable as a flavouring and possessing medicinal properties. In olden times supposed to be a specific against evil fortune.

Angels, divine messengers or agents communicating with or guarding human beings, a conception which is included in the Christian and other doctrines; and in former times, particularly in the Roman Church, special functions were accorded to certain angels and archangels, and their intercession was constantly appealed to.

Angelus, a church bell rung in Roman Catholic countries at noon, noon, and sunset, to remind the faithful to say their Angelic Salutation.

Angevin Dynasty includes the Plantagenet kings from Henry II. to Richard II. The name was derived from Henry II.'s father, Geoffrey, Count of Anjou.

Angiosperms are plants whose seeds are contained in capsules, as distinct from *Gymnosperms*, or naked seeds. The angiosperm provides the necessary mechanism for conveying water from the roots to the growing points.

Angiotomy, a surgical term signifying the cutting open of an artery, a vein, or some other vessel.

Angle, a term used to denote the inclination to each other of two straight or curvilinear lines. Angles are measured by the degrees of the circumference of a circle, which is divided into 360 equal parts, the angles formed by the lines radiating from the centre being proportional to the arcs of the circumference which the lines intercept. A right angle is one of 90°.

Angles, a northern tribe originally settled in Schleswig, who joined the Saxons in invading Britain and formed the Kingdom of Anglo-Saxons.

Anglican Communion comprises all the churches affiliated to the English Episcopal Church, including

also the Protestant Episcopal Church of the United States. British Colonial Churches are now, reed from State control, except that the appointment of Colonial bishops still remains with the heads of the Mother Church. The Anglican Communion comprises the Church of England, the Church of Ireland, the Scottish Episcopal Church, the Protestant Episcopal Church of the United States, the Canadian Church, the Church in India and Ceylon, the Church in the West Indies, the Australian Church, the Church of New Zealand, the South African Church, and some of Missionary Dioceses. The whole Anglican community comprises upwards of 50,000,000 adherents.

Angling is not the simple sport it was in the days of Izaak Walton, when the capture of fish with a hook was a fairly complete description of the sport. Now rod, line, and hook come into play in a variety of ways, and scientific methods are adopted which while making angling easier, perhaps detract from its picturesqueness. Salmon-fishing is the angling pastime of the rich, and English and Scottish waters afford plenty of good sport of this kind. Salmon are usually caught with the fly, but many artificial lures are also adopted. Trout are angled for much in the same way. Pike, grayling, chub, roach, perch, and other fresh-water denizens also provide good sport for gentle and simple in the right haunts, and Waltonians are to-day more numerous than ever. Some of the best known books on angling are Walton's *Complete Angler*, Francis's *Book on Angling*, Foster's *The Scientific Angler*, by W. E. Hodgson, *Trout Fishing and Salmon Fishing*, by the same author, *The Game Fishes of the World*, by Dr. Francis C. Holder, and, for the antiquarian, the *Book of St. Albans*, published by Wynkyn de Worde in the 15th century. See also *Pears' Dictionary of Sports and Pastimes*, pp. 857-882.

Anglo-Japanese Treaty, signed in 1902, and renewed in 1905 and 1911, aims at maintaining the rights of the possessions of the two countries in Asia, the integrity of India, and equal trading rights with China and Korea, each country undertaking to assist the other in case of its rights being attacked.

Angora goats are famous for their fine, long silky hair, from which mohair fabrics are manufactured.

Anguis, a genus of limbless lizards of the Scincidae family, including the slow worm.

Aniline, a well-known product obtained from coal tar. In some of its reagents it yields brilliant colours. In 1858 Sir W. H. Perkin succeeded in producing from aniline a dye-stuff to which the name of mauve was given. From that time aniline dyes came into wide adoption, and at the present time aniline can be utilised for every shade of colour desired. For the dyeing of fabrics, aniline colours are universally employed, also for coloured inks, tinting pulps, coloured soaps, cosmetics, and a host of other industrial purposes. Most aniline products were obtained from Germany before the war, and afterwards became so difficult to obtain from other sources that the Government took the matter up and to a large extent guaranteed a new company that was formed for dealing with the difficulty.

Animalcule is a term used to designate the myriads of minute animal creatures which are too small to be seen except by the aid of the microscope. These organisms exist in such vast multitudes that a single drop of water will reveal enormous numbers.

Animal Heat arises from the oxidation, within the physical tissues, of food consumed. It has been estimated that an adult man produces in twenty-four hours enough heat to boil five or six pints of water. The temperature of the blood is much affected by motion as well as food. Mental work reduces the heat slightly. The temperature of the atmosphere has little appreciable effect upon the body's heat when the condition is healthy. It is possible to keep life together when the internal heat falls so low as 75° F., and even to be saved from death with the temperature at 72° F. Cold-blooded animals—reptiles, fishes, amphibians, and invertebrate creatures—have the temperature of their surroundings, and may be frozen and still live if thawed.

Animal Kingdom, comprises all living beings, but in some of the lowest organisms it is difficult to discriminate between what is vegetable and what is animal. The two main divisions of the animal world are the *Vertebrates*, those possessing a backbone, and the *Invertebrates*, which are without. There are five classes of Vertebrates—*Mammalia*, such as suckle their young; *Aves*, birds; *Reptilia*, reptiles; *Amphibia*, animals living on land or water at will; and *Pisces*, fishes. The Invertebrates include; *Protozoa*, the lowest forms of animal life; *Ctenophora*, of which the hydra and the sea-anemone are examples; *Annulidia*, star-fishes, etc.; *Arachnida*, comprising insects, the lobster, spider, etc.; and the *Mollusca*, including snails, the oyster, the mussel, etc.

Animal Magnetism. (See *Hypnotism*.)

Animals at Sea. Most animals are difficult to deal with at sea, and give violent vent to their feelings until sea-sickness brings silence. The tiger suffers most of all. Elephants do not like the sea, but are amenable to treatment, a bucketful of hot water containing three or four drops of whiskey and seven ounces of quinine being occasionally administered. Oxen are heroic in their attempts to overcome sickness. Horses often perish on a sea voyage. The only animal that seems to be comfortable at sea is the polar bear. Of course, domesticated animals, such as dogs, cats, etc., make good enough sailors when once they have overcome their first sickness.

Animal is a transparent resinous substance exuded from the courtain tree, and receives its name because of its being alive with insects in its natural state. Used in perfumery and varnish making. It has also medicinal properties.

Animism, as defined by biologists, is "the general doctrine of souls and other spiritual beings."

Anise, an umbelliferous plant growing mostly in warm climates, and valued for its fruit, aniseed, possessing certain medicinal properties and yielding a volatile oil. Highly aromatic and used as a condiment for pickles and soups.

Anna, an Indian coin, one-sixteenth of a rupee in value.

Annals, or historical records, were kept by the Romans from an early period. In modern times the term is used to designate any general record of events arranged according to years.

Annates were acknowledgments formerly paid by way of fee or tax in respect of ecclesiastical preferment, and consisted usually of a proportion of the income (first-fruits) of the office.

Annealing is the process of slow cooling of glass and metal substances by which their brittleness is removed, and they become capable of resisting breakage. Some large castings are gradually cooled over a period of two or three months.

Annual Register, a yearly record of events, started by Doddsley in 1759, and for a time compiled by Edmund Burke.

Annunciation, Feast of the (March 25), is a church festival commemorating the message of the incarnation of Christ brought by the angel Gabriel to the Virgin Mary, hence the title Lady Day.

Anodyne is a term covering any application for the relief of pain, and includes the various opiates, quinine, salicylate of soda, and such familiar applications as poultices, fomentations, besides counter irritants like mustard plasters, aconite, chloroform, etc.

Anointing is the pouring of consecrated oil upon the body as a mark of supreme honour. In England it is a ceremony restricted chiefly to the ceremony of the monarch's coronation, and the spoon with which the oil is applied forms part of the English regalia. In the Roman Catholic Church anointing represents the sacrament of extreme unction.

Anomaly is a term used in Astronomy, for the angle measured at the sun between a planet in any point of its orbit and the last perihelion.

Anonymous, without name, indicates that a book or article is published without the author's name being directed.

Anas, a genus of swimming birds, the most familiar example of which is the goose.

Ant, an insect of the same order as bees and wasps (*Hymenoptera*). Ants live in communities under a well-defined system, and comprise males, females, and neuters. When the male and female, which are winged, leave their nest and pair, the male dies and the female sheds her wings and is made queen of a new community. The neuters comprise a working and a defending body, as well as a band of slave ants, captured from another species. As in the case of the bees, the work of the ants consists in the storing up of provision for the future, and their anthills contain a regular series of passages and storehouses. They feed on both animal and vegetable matter, and upon a kind of milk exuded by plant-lice.

Antacids, agents designed in medicine to diminish acidity in the system by increasing its alkalinity.

Antarctic Zone, comprises the Antarctic Circle, parallel to the Equator, about 23½ from the South Pole. Captain Scott, whose return from his *Discovery* voyage in 1904, penetrated 900 miles further than any previous explorer. Shackleton, in his *Nimrod* expedition in 1909, reached a point only 97 geographical and 11 statute miles from the South Pole. The Pole was first actually reached on December 14th, 1911, by Captain Amundsen, the Norwegian explorer. Captain Scott and his party arriving there on January 18th, 1912, and dying from exposure on the return journey. (See *Scott*, *Shackleton*, *Amundsen*, *Byrd*, *and* *Mawson*, *Douglas*, *Prosser*, *and* *others*.)

Anteater, a mammal found in South America and South Africa. It possesses a long, cylindrical tongue, coated with a viscid secretion. This tongue it thrusts into anthills and draws it forth covered with ants, which it devours. The American species is toothless; the African has molar teeth.

Antediluvian, applies to fossil evidences belonging to a period prior to human record, and is commonly regarded as indicating a time prior to the Deluge.

Antelope, a large zoological genus of mammals, mainly desert and elevated animals, with lustrous eyes; fleet of foot, and widely distributed.

Antenna, feelers of insects and crustaceans, usually two in number, though in the case of certain wingless insects, four or six. Their precise functions are unknown, but it is probable they serve some purpose additional to that of tactility.

Anthem, a choral composition, with or without accompaniment, usually sung after the third collect in the Church of England service. The words are from the Scriptures, and the composition may be either for solo voices only, full choir, or both. Among the chief English composers of anthems are Tallis, Purcell, Croft, Boyce, Goss, and Stainer.

Anthology is the figurative term used to describe a selection or collection of literary compositions, usually poems or hymns. The first Greek Anthology, comprising the choicest pieces by Greek classical poets, was compiled by Meleager, about 90 B.C. The Latin Anthology was made by Bannan about 1600 A.D.

Anthracite is a hard kind of coal which burns without flame, and contains upwards of 90 per cent. of carbon. Pennsylvania is the largest known anthracite coal region. The next largest field is in South Wales.

Anthropoid, meaning "resembling man," is the term employed to designate the order of apes whose structure has similarity to that of man. The gorilla, orang-outang, and chimpanzee are of this order, and, in number and general form of limbs, and physical organism generally, bear a nearer resemblance to human beings than any other creatures. On this fact much of the Darwinian theory has been built.

Anthropology is the science which reveals man's place in nature, and describes the mental and physical peculiarities of mankind—a science which owes much to the researches and expositions of Darwin, Wallace, Spencer, Huxley, Lyall, and Haeckel in modern times. It is a branch of study that assumes greater importance every year, and at the annual meeting of the Anthropological Section of the British Association the most eminent scientists of the day set forth their views. There is also an Anthropological Institute in London.

Anthropometry is the system of human measurement invented by M. Bertillon, of the French Criminal Department, for purposes of establishing identity. In this connection the evidence of finger prints has been applied in numerous recent criminal cases with complete success.

Anthropomorphism is the application to the Deity of the attributes of man, a form of belief which belongs more or less to all religions, for the reason that man is incapable of imagining beings of a higher form than his own.

Antiburghers, a Scottish sect which arose in 1749, many members of the Associate Synod declining to take the oath exacted as a criterion of burghership in Edinburgh, Glasgow, and Perth. Mainly now merged in the United Presbyterian Church.

Antichlor is a substance used in paper-making to free the pulp from the luridous after-effects of chlorine.

Antichrist, the name given to the enemy of Christ, as mentioned by St. John, and long anticipated by the early Christians.

Anticlimax is the reverse of climax, introducing the strong point of a story or argument before the close instead of reserving it for the end.

Antilegomena, the books of the New Testament which were not accepted as canonical by the early Christian churches, though afterwards admitted to equal authority with the rest. These were the Epistle to the Hebrews, the Epistle of St. James, the Second Epistle of St. Peter, the Second and Third Epistles of St. John, the Epistle of St. Jude, and the Apocalypse or Revelation of St. John.

Antimony, a crystalline metal of great brittleness. On being burned, it gives off dense fumes of oxide of antimony. By itself it is not of special utility; but as an alloy for hardening other metals, it is much used.

As an alloy with lead for type-metal, and with tin and copper or zinc for Britannia-metal, it is of great value. All antimonial compounds are poisonous.

Antinephritic, a medicine comulative of kidney diseases.

Antinomians were members of the early Christian communities who claimed immunity from obedience to the "law," on the pretext that faith alone was sufficient to secure salvation. Luther used the term to describe certain religiousists of his own day who favoured the same views.

Antipathy, when it arises in connection with things that do not commonly excite unfavourable feelings, is often caused by shock or fright, and may be either in regard to things seen, heard, or smelt.

Antiphony occurs in connection with psalmody, and consists in the alternation of parts by two different sets of voices of a choir or congregation.

Antipodes, the parts of the earth exactly opposite to our feet, having seasons, etc., at exactly opposite times to ours. Thus the North Pole is the antipodes of the South, and New Zealand the antipodes of England.

Anti-Semitism, a modern revival of the old-time hatred of the Jewish race, confined mostly to Germany, Austria, and Russia, and sometimes marked by violent and unjustifiable outbreaks. In Russia especially the Anti-Semitic feeling has been attended by great cruelty, and thousands of Jews have been driven to take refuge in foreign countries, many of the poorer class of Jews coming to Britain. Beginning as a political movement intended to keep the rich Jews from obtaining ascendancy, it has spread far beyond political boundaries. For the protection of persecuted Jews the late Baron Hirsch started a scheme for transferring large numbers to new countries and endowed it with a sum of £9,000,000. See *Zionism*.

Antiseptics, the term applied to substances which destroy or weaken microbes, bacteria, or germs, and often arrest the spread of diseases caused by these minute putrefying agents. Among the chief antiseptic substances are carbolic acid, corrosive sublimate, or perchloride of mercury. In the case of water, milk, or other liquids, boiling is the simplest antiseptic.

Antithesis is a form of expression which deals in opposites—as contrasting the light with the dark,

good with evil, and so on—and is often resorted to by eminent writers with effect.

Antisemitism indicates one who denies the Trinity.

Antitype, that which agrees with or fulfils the type: as Christ was the realisation of the Paschal lamb.

Antlers are the horns of deer, and, except in reindeer, are restricted to the males.

Aorta, the main trunk of the arterial system, in direct communication with the heart, and from which all the other arteries spring.

Apaches, a tribe of Red Indians, formerly ferocious, and spread over the Mid-West of America. A name also given to a set of lawless and violent people in Paris.

Apatite, a widely distributed mineral, consisting mainly of phosphate of lime, and useful in promoting vegetation.

Ape, a term applied to monkeys generally, and covering the whole group of primates between man and the lemurs.

Apellion, the point in the orbit of a planet farthest from the sun, where the motion is slowest.

Aphengescope, a modified magic-lantern for the exhibition of optical objects.

Aphides, plant lice, a numerous species of destructive parasites living on roots, leaves, and plants.

Apis, the sacred bull worshipped by the ancient Egyptians; also the scientific name for the bee.

Apjohnite, a mineral containing much sulphuric acid, occurring in white asbestiform or fibrous masses at Lagoa Bay, in South Africa.

Aplysia, a genus of molluscs, with an oblong translucent and flexible shell, popularly called sea-hares, and inhabiting the humarian zone. They have four tentacles and discharge a violet fluid on molestation. Some species are found in British waters.

Apocalyptic Number, the mystical number 666, mentioned in the Apocalypse.

Apocalyptic writings are those which deal with revelation and prophecy, more especially the Revelation of St. John.

Apochromatic object glasses are prepared so as to destroy the second residuary spectrum.

Apocrypha, the title given to the Hebrew writings, not regarded as canonical by the Jews, but received by the Roman Catholic Church. Regarded as only historical records by the Protestant Churches. The term applies mainly to the additional Old Testament books, but there are also some Christian writings of the same character. The Apocryphal books include 1 and 2 Esdras, Tobit, Judith, Esther x.-xvi., Wisdom, Ecclesiastical, Baruch, Song of the Holy Children, Bel and the Dragon, the Prayer of Manasses, and 1 and 2 Maccabees.

Apogee, the point in the moon's orbit at the greatest distance from the earth.

Apollinarians, followers of Apollinarius, Bishop of Laodicea, who lived in the 4th century, and denied the humanity of Christ. Condemned as heretics.

Apologetics is the branch of Theology that defends Christianity from external attacks, Natural Theology and Revealed Theology.

Apostasy is a revolt, by an individual or party, from one form of opinions or doctrine to another.

Apostolic Council, held at Jerusalem, A.D. 52, presided over by James, to decide what the obligations of Christians were to the Mosaic law.

Apostolic Fathers were the immediate disciples or followers of the apostles, especially such as have left writings behind them, including Barnabas, Clement, Hermas, Ignatius, Polycarp, etc.

Apostolic Succession is the derivation of holy orders by an unbroken chain from the Apostles, and the succession of the ministry to the powers and privileges of the Apostles.

Apothecary, one who prepares and distributes drugs. In 1805 the Apothecaries' Company of the City of London obtained the privilege of examining and licensing all the apothecaries and sellers of drugs throughout England and Wales.

Apoteosis was the Greek term for the inclusion of a mortal among the Gods. Divine honours were accorded to Julius Caesar and Augustus.

Apparitions indicate supposed supernatural ap-

pearances, and were much believed in by the primitive races. Even now there are many who have faith in spiritual manifestations, but science regards them as but creations of a disordered brain.

Appian Way, the oldest of the Roman Roads, originally laid by Appius Claudius from Rome to Capua, and afterwards extended to Brundisium.

Apse is a semicircular recess situate at the east end of the choir or chancel of early churches, and vaulted over.

Attery, a large wingless New Zealand bird of the ostrich order, valued for its skin.

Aquarium, a vessel, or building, devoted to the collection of marine or fresh water animals. Some quarter of a century back large buildings were erected at Brighton, Scarborough, and many other seaside resorts, as well as in London and numerous inland towns, to which the title of Aquarium was given; but in recent years these buildings have for the most part been turned into mere pleasure resorts, the proper aquarium element being neglected. The Brighton Aquarium, however, still maintains to a great extent its original character. The Westminster Aquarium was purchased by the Wesleys, and the site is now set apart by that body as a great metropolitan church centre.

Aquatint is a method of etching on copper, by which limitations of drawings in water-colours, Indian ink, bistre, and sepia are produced.

Aqueducts were known to the Greeks, but were perfected by the Romans. There still exist several Roman aqueducts, including the Aqua Julia, constructed under Vespasian Agrippa, and the Aqua Felice, restored by Pope Sixtus V. Among modern aqueducts may be mentioned that of Glasgow, which brings water to that city from Loch Katrine; that of Manchester, which taps Thirlmere; and that of Liverpool, with Lake Vrinny in North Wales, as its source.

Arabesque, the term applied to the elaborate decorations introduced into Europe by the Spanish Moors. The Arabesques of the Vatican galleries, by Raphael, form a splendid example.

Arabian Nights, a collection of fascinating tales of the Orient, of mixed Indian, Persian, Arabic, and Egyptian origin, and first made known in Europe by Antoine Galland, a French Oriental scholar whose original translation was called *The Thousand and One Nights*.

Arabic Numerals were introduced into Europe by the Arabs in the 8th century. They consist of the characters, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, and after the introduction of printing came into general use, being much simpler than the Roman numerals.

Arachnida, small articulate animals, including spiders, scorpions, etc., without antennæ or wings, and placed between crustacea and insects.

Aramaic, the language of the Arameans or Syrians, the common dialect of those trading people in the 1st century A.D.

Araucaria, a kind of cone-bearing tree of the pine family, distributed over various parts of the Southern hemisphere.

Arbalest, a steel crossbow set in a shaft of wood and worked with a trigger, introduced by the Normans.

Arbitration, General. (See *Arbitration in Dictionary of Business Section*.)

Arbitration, International. In recent times many attempts have been made to decide international disputes by this means—sometimes with success. The Palace of Peace at the Hague (the gift of Mr. Andrew Carnegie) inaugurated in 1913, is specially dedicated to the cause of peace and international arbitration. One of the most prominent of international arbitrations was that in 1872 between Great Britain and America concerning the "Alabama" claims. Numerous general arbitration treaties have been entered into between other countries; and England and France, and England and America, have in recent times arranged long outstanding frontier and other disagreements in this way. At the famous Conference at the Hague in 1899, suggested by Russia, an international arbitration scheme of

extensive powers was approved, and may ultimately lead to something more humane than the arbitrament of war, though it was not considered sufficient to deal with the disputes which brought on the war between Russia and Japan in 1904. As an incident of this conflict, however, there is the arbitration on the Dogger Bank outrage to refer to, which settled a difference that might otherwise have led to war between England and Russia.

Arbor Day, a day devoted to promoting the growth of trees. First adopted in Nebraska, but now the movement has spread to all parts of the American Continent, and to South Australia. In some parts of England also the idea finds favour.

Arbor Vita is the name given to the tree-like appearance of the cerebellum when it is cut through, due to the arrangement of the white and grey nerve matter. Also the name of a cone-bearing plant of the cypress order, possessing medicinal virtues.

Aradia, a district of Peloponnesus (Morea) whose inhabitants in the days of the Pelasgi were of extreme simplicity, and the term has ever since been used to denote an idealised country of primitive things.

Arch was introduced into architecture by the Romans, and was thereafter widely adopted in relief to the straight-line method.

Archæology deals with the relics of ancient times, constructing historical deductions, and ascertaining the manners and customs of past periods, then from.

Archopteryx, a bird which is supposed to show the connecting link between reptiles and birds, its fossilised remains revealing some of the characteristics of both orders.

Archaism is a rhetorical term, denoting a style of composition or discourse of an obsolete or antiquated kind, admirable in poems and other writings of a highly idealised or allegorical form, but otherwise out of place.

Archbishop, the title of the two highest dignitaries of the English Church: the Archbishop of Canterbury, called the Primate of all England, and the Archbishop of York, styled the Primate of England.

Archil, a purple pigment, obtained from a species of lichen, and changing to red by application of acid.

Architecture, or the art of building, is of three main classes—military, naval, and civil—the general application of the term being to the last named.

The five leading orders of architecture are the *Doric*, the oldest, of which the best examples were shown in the Greek temples; the *Ionic*, another Greek variety, lighter and more decorative, as shown in the Erechtheum at Athens; the *Corinthian*, introduced in the time of Alexander the Great, well known by its graceful columns and enrichments; the *Tuscan*, which the Romans invented—a solidified Doric; and the *Composite*, which combined the leading features of the *Doric* and *Corinthian*. As exemplified in modern times, more especially in England, architecture is exceedingly varied in form, but between the 6th and 17th centuries we get at least six distinctive styles. First, the Saxon and Norman; next the Semi-Norman; then the Early English or Gothic (of which Westminster Abbey and York Minster furnish prominent examples); the Decorated English; the Perpendicular English (15th century), and the Delvated English (1509 to 1601). During the early Stuart period there was the Renaissance style which obtained a strong footing. Then we come to the Queen Anne style, which is of a more domestic order; and in later times there has been a revival of nearly all styles, sometimes in their pure form, but more often presenting an adaptation or combination of styles. Away from these well-known styles, we have more primitive examples in the architecture of the earlier nations—Egyptian, Assyrian, Etruscan, Persian, Chinese, and Jewish—all possessing more or less individuality of feature, the result partly of local, climatic and other requirements, and also of some special artistic evolution.

Arctic Exploration dates from a very remote period, King Alfred relating stories of early Polar expeditions, but it was not until the 16th century that men began to make serious attempts to discover either a North-west or North-east passage. Sir Hugh

Willoughby, Davis, Chancellor, Baffin, Frobisher, and Henry Hudson were the most famous early explorers. The Company of Merchant Adventurers and the Hudson Bay Company were promoters of such schemes, and all through the 17th century attempts were being made to penetrate the Polar regions. In 1818 George III. offered a reward of £20,000 to any one who should make the North-west passage, and Scoresby, Ross, Parry, and Franklin all became associated with Arctic expeditions. Ross and Parry went out in 1818, and then came Sir John Franklin's ill-fated expedition in 1845. When Franklin failed to return and no news could be obtained concerning him, a number of search expeditions from Great Britain and America were undertaken. Kennedy, McClure, Rae,

Belcher and McClintock in turn succeeded in making important discoveries, and evidence was found of the perishing of Franklin and his crews. Lieutenant Greely made an important expedition in 1881–1884, and those of Nares and Markham added to our knowledge. Dr. Nansen's crossing of Greenland in 1888, and his subsequent journey with the *Fram* in 1893–1896, were memorable events. Nansen and Lieutenant Johansen, with two kayaks and a number of dogs, travelled 87° 14' N., 300 miles nearer to the Pole than had been reached before. The expedition verified the theory that there was a current flowing across the Polar region from the New Siberia Islands. Mr. Jackson discovered a large open sea, and Lieutenant Peary in 1902 found it covered with ice. The latter rounded the north part of Greenland in 1900. H. R. H. the Duke of the Abruzzi's expedition, under Captain Cagni, in 1899 reached 86° 33', 22 miles farther north than Nansen. In 1906 Commander Peary got within 201 miles of the Pole, the American thus approaching nearer by 35 miles to the objective than the lower of Nansen's north record. In September, 1909, however, the world was startled by the news that Dr. Cook, an American explorer, had actually reached the Pole, but later evidence does not substantiate this. This was followed closely by the announcement that Peary had also planted the Stars and Stripes at the Pole, and the Commander has since published a full description of his discovery. The first International Congress for the study of the Polar Regions was held at Brussels in September, 1909, and steps were taken for the constitution of a permanent universal association for the purpose of concerted organisation of further explorations in the Arctic. (See **Antarctic Zone**.)

Argali, a kind of wild sheep found in Siberia and the Steppes of Northern Asia generally, by some considered to be identical with the diction of the *Fematauch*.

Argillaceous Rocks are a sedimentary group, including the shales and clays, into the composition of which aluminum largely enters.

Argon, a chemical element discovered by Lord Rayleigh in 1894 in the nitrogen of the air.

Argonaut (Piper Nautilus), an aquatic animal of the cuttle-fish order. The females have a fine shell.

Arianism, so called after Arius of Alexandria, who denied Christ's divinity and caused the Emperor Constantine to summon the Council of Nice, 325 A.D. **Aristolene**, an alkaloid contained in the bark of *arica*, and also in *Cinchona acida*.

Aries, the Ram, the first of the signs of the Zodiac.

Arion, the horse of Adrastus in Greek mythology, which was said to have the gift of utterance and of prophecy, and figured in the Theban war.

Arithmetic did not flourish to any great extent until the adoption of the Arabic numerals. It is supposed to have originated as a science in India. The system of the Greeks and Romans was complicated, and it was not until the 16th century that the science reached any great development.

Ark of the Covenant was the sacred chest, overlaid with gold, which occupied the inner sanctuary of the Temple, and symbolised God's covenant with his people.

Armada, Spanish, has reference, in this country,

specially to the naval expedition fitted out by Philip II. of Spain in 1588 against England, commanded by the Duke of Medina Sidonia. It comprised 129 ships, of which 65 were each of more than 700 tons; it was manned by 8,000 sailors and carried 19,000 soldiers, and more than 2,000 cannon, with food for 40,000 men for six months. Against this formidable force Elizabeth had only 50 ships, manned by 2,000 sailors, under Lord Howard of Effingham, under whom served Drake, Hawkins, and Frolicher. The British Fleet awaited the Armada off Plymouth, and at Tilbury was a considerable defensive land force under the command of the Earl of Leicester. On July 19, the ships of the Armada were sighted off the Lizard, disposed in a crescent seven miles long from horn to horn. The excellent manœuvring of the English, their fire-ships, and a gale from the N.W. combined so effectively to cripple the Spanish ships that at length the Armada was scattered in helpless confusion, but a very small remnant contrived to reach home. Elizabeth had a medal struck, bearing in Latin the inscription "God blew, and they were scattered."

Armadillo, a genus of animals belonging to South America, and carrying a hard bony covering over the back, under which the animal can completely conceal itself when attacked, rolling itself up like a hedgehog.

Armageddon, according to the Revelation of St. John, the great battle in which the last conflict between good and evil is to be fought.

Armature, the portion of an electrical dynamo consisting of wire coils, so arranged as to give when rotated an increased flow of electrical energy.

Armet, a helmet of metal worn in war by the French, in the 13th and two succeeding centuries.

Armillary Sphere, an astronomical apparatus with circles representing the equator, ecliptic, etc., arranged round a globe, in their relative positions.

Arminianism, the doctrine of Jacob Harmensen, who was born in Holland in 1600, especially directed against Predestination, but less austere logical than the dogma of the early Reformers.

Armless and Legless M.P. The late Mr. Arthur MacMurrough Kavanagh, who in the eighties of last century was an active legislator in the House of Commons, was born without arms or legs, and is remembered for more than his very able championship of the cause of the Irish landlords. He was famed as a yachtsman and horseman, and travelled on horseback across Russia and Persia to the Persian Gulf. His riding with the Carlow Hounds is still remembered with wonder amongst the country-folk, and with the pen held between his teeth he wrote a good "hand."

Armlet, a bracelet worn on the upper arm in the East as part of the insignia of royal rank and power.

Armour, protective covering worn by those engaged in military pursuits, and consisting of a great variety of pieces and materials from hauberts of mail to a complete panoply of plate.

Army.—An organised equipment of land forces for carrying on the work of war. Egypt had such an organisation under Sesostius, 1600 B.C. The Persians later on were similarly equipped, but it was left for the Romans to bring into operation an immense regular army in which every citizen between 17 and 45 was compelled to serve. The Turks were the first among modern European nations to create a standing army in the 14th century; and Charles VII. of France had a force of 25,000 trained soldiers. There was no proper standing army in England until the reign of William III. In 1691 an Act was passed authorising a force of 65,000 men, and although this number was afterwards greatly reduced, whenever war broke out the regiments were added to, and England had 200,000 men in the field during the War of the Spanish Succession. There was no regular barrack-accommodation in England before 1792. For the Peninsular War, Great Britain got together an army of 240,000. Then, after Waterloo, came the long peace when army matters were neglected. With the Crimean War there was a terrible awakening,

however; and Parliament began to devise improved army schemes. A Volunteer and a Militia auxiliary force had been organised, and in 1891 Lord Cardwell effected a revolutionary change with his system of localisation, linked battalions, short service, and the abolition of purchase. Further improvements were introduced later; but in the Boer War of 1899-1902 we were once more unprepared, and had to pay the penalty in frequent loss, humiliation, and defeat. Then was Mr. Brodrick's Army Corps scheme devised, but it did not work out well; and still another plan of army reorganisation was evolved in 1904 by Mr. Arnold Forster, which provided for a total "paper" strength of 227,684 men. A new Army Order was issued on January 1, 1907, by Mr. (now Lord) Haldane, then War Secretary, providing for the allocation of all regular troops to a particular command, and giving the station of every unit in the British Army. The organisation for war of the field army for service abroad is one cavalry division (of four brigades); six divisions; Army troops; troops for a line of communication. The Haldane reform provided for eight areas of command, each containing on the peace footing its complete proportional quota of the forces. Before the war (1914) the British Army had a strength of 717,575 effectives, but by April, 1915, we had about 750,000 men at the front, while the casualties of 135,000 up to April 11, 1915, had been made good. So from month to month the augmenting of the army has continued, and at the present time (May, 1915) the British Army has on active service and in training over 2,000,000 men. All the overseas dominions (including India and South Africa) have helped nobly to swell the number. To-day we possess the largest voluntary army ever got together, but the cry on all sides is still for more men and more munitions, and our whole national resources are being drawn upon for the task. The German army with which the Kaiser ruthlessly broke the peace of Europe, regardless of the sanctity of treaties and the rights of neutral nations, was the greatest fighting machine the world has ever seen, the outcome of a steady preparation of over forty years, for winning the domination of land and sea, and of a determination to thrust Britain out of its place among the nations. In addition to its equipment, however, it has resorted to the utmost lawlessness, barbarity, and cruelty in its operations, destroying neutral ships and civilian peace-keepers, with a recklessness that sets all law and humanity at defiance. In this it has stained its record for all time to come, and set an example that, if followed, would bring about universal war. That the armies of the Allies have been able to cope successfully with this force and savagery is splendid testimony to the patriotic spirit which has animated the Allied Armies. France, Germany, Austria-Hungary, and Russia practically require every able-bodied man to be subject to service. The standing army of the United States is fixed at a maximum of 100,000 enlisted men and a minimum of 60,000, with voluntary enlistment and a five years' service. But, of course, any of these nations can, on an emergency, call up an army of efficient far in excess of its peace strength.

Arnica, the name of a genus of plants of which the dandelion is a leading example.

Arnotta, a reddish-yellow dye obtained from the seeds of the *Fixa orellana*, a South American plant. It is employed for colouring cheese and butter, also in chocolates and soups; and a preparation of the pigments imparts an orange tint to certain wines.

Arpeggio, in music, indicates the striking of a chord or notes in rapid succession, instead of simultaneously.

Arguebus, one of the earliest forms of firearms. The piece was discharged by a match applied manually to the touch-hole, and later with a trigger.

Arrack is the East Indian name for distilled spirit generally, but especially for that made from the fermented juice of the cocoa-nut or from rice.

Armagobite, a mineral consisting of carbonate of lime in a crystalline form, sometimes found pure, and sometimes mixed with other metals in minute

quantities. Crumbles to powder under heat. First discovered in Arragon.

Arrowroot, obtained from the rhizomes of the tropical *Maranta*, also from the potato and the arum. It provides a pure starch food, suitable for invalids.

Arsenals are repositories for storing, or workshops for making, arms, guns, accoutrements, stores, etc. The chief English arsenals are at Woolwich, Deptford, Chatham, Pembroke, Sheerness, Portsmouth, and Plymouth: the chief arsenals of France are at Cherbourg, Brest, Toulon, L'Orient; of Russia at Kronstadt and Sevastopol; of Germany at Danzig and Wilhelmshaven; of Italy at Spezia.

Arsenic, a chemical element, by some regarded as a metal, of a crystalline and brittle nature, usually met with as a constituent of other minerals, but sometimes by itself. One of the most virulent of our poisons.

Artesian Wells—so called because of their first being discovered at Artois—are borings made through strata which water cannot permeate to others of a porous kind which are full of water. The fountains in Trafalgar Square are fed by artesian wells sunk through the London clay into the chalk about 400 ft. At Passy, near Paris, there is an artesian well 1,400 ft. deep, and at Grenelle one about 1,800 ft. They are very valuable in countries where agriculture depends on irrigation. At St. Louis, Missouri, there is one 3,847 ft. deep; and one in Western Queensland reaches the depth of 4,000 ft.

Articles. This term is variously applied. The Six Articles are those contained in an Act of Henry VIII., upholding Transubstantiation, Clerical Celibacy, Auricular Confession, and other doctrines which the Reformation put in their proper place. The *Thirty-Nine Articles* comprise the doctrine of the Anglican Established Church, and must be subscribed to by all taking holy orders therein.

Artificial Sunshine. A scientific station or botanical laboratory has been established at Wisley, near Weybridge, devoted to the growth of plants by electric light as a substitute for sunshine. The fact that artificial light enables plants to grow and fruits to ripen has long been known to men of science. In 1879 and 1880 the late Sir William Siemens made some successful experiments in this direction at Tunbridge Wells. More than 40 years ago M. Hervé Mangon discovered that flowers turned towards the electric lamp just as they turn towards the sun. Many experiments have been made in France, America, Russia, and elsewhere, and beyond doubt simulated sunshine can be used with good effect.

Artillery, the science and art of gunnery; the implements of war employed therein; and the men constituting the military corps in charge of the cannon of an army and trained to their use. In the British Army the artillery force is divided into the three sections of Horse, Field, and Garrison Artillery. The headquarters of all are at Woolwich, as is also the Royal Military Academy, through which pass the cadets who later become artillery officers.

Arum, a genus of plants of the Araceæ order, of which there is but one British species, the wake-robin or cuckoo-pint, sometimes also styled "Lord and Ladies." Its pointed leaves and spikes of scarlet berries are familiar hedge-side objects. The latter are poisonous. In Switzerland the rhizomes are employed by the peasantry as substitutes for soap; and with the pronouncedly acrid fluidity expressed, are capable of conversion into a flour that may be utilised in lieu of or for admixture with corn meal. This resembles arrowroot.

Arundel Marbles, a collection of ancient sculpture formed by Thomas Howard, Earl of Arundel, in the 17th century and presented to Oxford University by his grandson, Henry Howard, who became Duke of Norfolk. The most renowned feature of the collection is the "Parian Chronicle," a fragment of an inscription containing some important dates in Greek history between 550 and 480 B.C.

Aryan is a term used to denote the lingual and ethnological groups otherwise known as Indo-European or Indo-Germanic. Comprises two branches, Western or European, and Eastern or Armenian. The Aryan

languages show common origin by their vocabulary, syntax, and inflexions. The word *Aryan*, derived from the Sanskrit, means an "honourable lord of the soil"; the nearest to the parent tongue is Sanskrit, and the chief divisions in Europe are the Teutonic, Romance, Slav, and Celtic. The Turks, Magyars, Basques, and Finns are non-Aryan. The common ancestors of the Aryan groups dwelt among the Pamirs at a period of remote antiquity.

Asafetida, a well-known drug made from the juice of plants of the Umbelliferae order, including celery, parsnip, etc. Has a very offensive odour.

Asbestos designates a peculiar form of mineral, occurring in crystals in pyroxene, and, massed together, is fire-proof. Found in Cornwall and some parts of Scotland, but the finest comes from Sava, and it is also abundant in Canada and Tasmania.

Ascension Day, or Holy Thursday, is the 40th day after Easter.

Asceticism was originally the term applied to the training by Greek athletes. Afterwards the Stoics, and others used it to express the mastering of the passions. Later the idea passed into Christianity, and from celibacy and abstinence was carried to terrible lengths in the way of self-mutilation, torture, and human sacrifice, enthusiasts vying with each other in self-mortification. The chief manifestations of Asceticism in modern times have been Moricism and the various forms of personal humiliation, fasting, penance, pilgrimage, etc., but the principle survives nowadays only in a very mild form.

Ascidium, the typical genus of the truncated mollusca. The sea-squirt is a familiar example. The Darwinian development theory traced the ascent of man from this low animal condition.

Ascot Races are an annual fashionable function dating from 1771 and taking place on Ascot Heath, only six miles from Windsor, in June. Have always had royal patronage. The course is nearly two miles long.

Asgard, the Heaven of the Scandinavian mythology. **Ash**, a familiar tree of the olive family, remarkable for its thick foliage and height of growth, often attaining from 100 to 150 feet. Is a valuable timber tree, tough and elastic, and largely used for wheels. In Scandinavian mythology the first man and woman were the ash and the elm, and the court of the gods was held under an ash. In the Highlands of Scotland it used to be thought lucky to give infants ash-sap as their first food.

Ashburton Treaty, so called after Lord Ashburton, the ambassador who carried it through, was signed between Great Britain and the United States in 1842 and settled some boundary differences between Canada and the State of Maine, and also dealt with the African Slave Trade.

Ashlar, a term designating the flat dressed stone as prepared for building use.

Ash Wednesday, first day of Lent, on which ashes were sprinkled on the head as sign of penitence under an injunction of Pope Gregory the Great in the 6th century.

Asmodeus, a demon whose story appears in the apocryphal book of Tobit, and figures frequently in Jewish traditions. Asmodeus is the supernatural figure in L. E. Sage's *Le Diable Boiteux*.

Asp, a small poisonous snake, often mentioned in ancient literature and traditionally supposed to have been used by Cleopatra in killing herself, though some modern naturalists scout the idea. It belongs to the cobra da capello genus.

Asparagus was a favourite vegetable with the ancient Romans, and is much prized to-day. Possesses a perennial root and yields the edible stalks every spring.

Asphalt, or mineral pitch, is a bituminous substance, the result of decayed vegetable matter, containing 80 per cent. of carbon, with hydrogen, nitrogen, and oxygen. Is largely used, mixed with sand, chalk, etc. for making road surfaces in dry climates, such as France, Italy, Germany and America, and to a considerable extent also in this country, though the English climate is too humid for its general adoption, it becoming slippery with moisture. The ancient

Egyptians used it for embalming, and the Babylonians made wells of it. Trinidad, the Rhone Valley, the Dead Sea, and many other places yield asphalt. An artificial asphalt largely composed of coal tar is used as asphalt in England, though in big cities are numerous examples of Italian material.

Assassins were first heard of in Persia about 1090. They were a secret religious sect, at the bidding of whose chief they murdered persons as an act of duty. Similar bodies were formed in various connections in later times, but the term assassination is now only used to specify the slaying of some public personage, and does not necessarily imply plot or collusion, although the majority of assassinations in recent times have been connected with political or anarchist movements. Among the most notorious instances of assassination may be mentioned the following:—Julius Cæsar, 44 B.C.; James I. of Scotland, 1437; Rizzio, 1566; Cromwell, 1659; Henry IV. of France, 1622; Duke of Buckingham, 1628; Marat, 1793; Lincoln, 1865; Garfield, 1881; Lord Frederick Cavendish and Mr. Burke, 1882; Alexander II. of Russia, 1881; President Carnot, 1894; the Empress of Austria, 1898; King Humbert, 1900; President McKinley, 1901; M. de Pelvée, 1904; the Grand Duke Sergius of Russia, 1905; Carlos I., King of Portugal, and the Crown Prince, Luiz, 1908; Archduke Francis Ferdinand of Austria and his wife, June 28th, 1914.

Asatara, a bivalve mollusc, of which there are many widely distributed fossil species, but only some twenty living species inhabiting the Arctic and North Atlantic oceans.

Asteroids were unknown until the discovery of Ceres by Piazzi in 1801; at present over 500 are catalogued, the application of photography being responsible for the great majority. Most of the minor planets are mere celestial footballs, some having a diameter of only five miles. Their orbits lie between those of Mars and Jupiter. Whether these bodies are the fragments of large planet is a question that is not yet determined.

Astrakhan, the curled wool of a species of black sheep native to the Russian province of Astrakhan.

Astrology, the so-called science of the stars, has few serious believers in these days, and yet there are "planet-rulers" and "professors" who still find people credulous enough to put faith in their astral readings. Certain almanacs continue to appear year after year, whose chief claim to support is based on astrological pretensions and predictions. Astrology, however, was a serious study at one time, and monarchs and other illustrious personages were frequent consulters of the astrologists. The Chaldeans are supposed to have invented astrology, which is an abstruse and involved systematisation, well calculated to impress the superstitious and ignorant. Astrologers divide the heavens into twelve equal parts, called *houses*, and endow the planets with certain influences and found their predictions on the positions occupied by the heavenly bodies at a person's birth or at any critical period.

Astronomy, the oldest and one of the most fascinating of sciences, was in early times associated with astrology, but by a long series of observations and mathematical calculations a gradual knowledge of the movements of the heavenly bodies grew up, and it now ranks as one of the positive sciences. Pythagoras (500 B.C.) understood the revolution of the earth upon its axis, but it was not until a thousand years later that this theory gained general acceptance, when the keen and spacious minds, first of Copernicus, and then of Tycho Brahe and Galileo, demonstrated the truth of the Pythagorean theory. With the setting forth of the Copernican system, astronomy was placed on a sure foundation, and the movements of the planets began to be more clearly comprehended. Naturally there was much that was crude and imperfectly defined in the system of Copernicus, but it was a working basis, and the studies of Kepler and Galileo, making their observations with the telescope, resulted in an im-

mense increase of astronomical knowledge. Newton to whom we owe the discovery of the law of gravitation, the improvement of the telescope, and many other discoveries, placed physical astronomy on well-defined lines. Halley, Laplace, Herschel, and other eminent astronomers also added to the further comprehension of the science, and in our own day a vast accumulation of knowledge on this interesting subject has resulted from the improved scientific apparatus and equipment now available.

Ataghan, a long curved dagger, worn by Turks and neighbouring peoples in the belt. The scabbard was often of silver-gilt and sometimes of gold.

Atavism, the "breeding back" to remote ancestral characteristics, observed in all forms of animal life.

Athanasian Creed is named after St. Athanasius, who flourished in the 4th century, and is an exposition of his doctrine of the Trinity and the Incarnation, but is supposed to have been written by Hilary, Bishop of Arles, in the 5th century.

Atheism is the denial of the divine, and it assumes three forms—denial of the existence of God, denial that God has been proved to exist, and denial of the possibility of knowing of divine existence.

Atherine, a pretty little fish found in the Mediterranean and along the south coast of Britain. The latter variety is familiarly styled the sand-smolt.

Athletics of all kinds are more generally indulged in to-day than at any former period. In the ancient Greek and Roman times wrestling and running were regular sports, chiefly contested by trained professional men, and great honour was paid to the winners. Euthymus, Milo, and Hippodamus were among the more celebrated "classical" athletes, while Plato, Pythagoras, and Cleanthes were ardent contestants of no mean renown. The Isthmian Games at Corinth and the Olympic Games on the banks of the Alpheus in the Peloponnese, were immensely popular; whilst the same kind of games continued to be practised more or less in all countries, from century to century, though perhaps with the keenest zest in England. Here, in mediæval times, in addition to wrestling and running, archery, quarterst, jumping, and other athletic games were much in vogue. The developments in athletics during the 19th century were surprising. At the Universities and the public schools, and in connection with military regiments, industrial establishments, and all kinds of institutions, athletic clubs were formed, while every town, village and hamlet had its athletic club in sufficiently large numbers to afford youths and young men everywhere the opportunity of becoming members. The whole country became interested in athletic sports, and cricket in the summer and football in the winter have their adherents in every nook and corner of the kingdom. France and Germany have also in recent years taken to athletic sports, and in the United States all the English games are played, with the addition of baseball, which is the American national game, as Lacrosse is the national game of Canada. The defeat of our English polo and lawn tennis champions in the United States were among the events of 1913. In view of the Olympic games of 1916 at Berlin, a movement was set on foot for raising £100,000 in aid of British athletics, but not proceeded with. Women are now largely given to athletic exercises of the milder form. See *Sports and Pastimes* Section of "Pears' Cyclopaedia."

Atlantic Cable Telegraph. Telegraphs were talked of for some years before an attempt was made to accomplish the feat of laying one. Professor Morse in America suggested the idea as early as 1845, but it was not until 1858 that it assumed a practical shape. Sir Charles Bright succeeding in that year in laying the first cable between Valentia, in Ireland, and Newfoundland. It was 2,500 miles long. From a variety of causes, however, this first cable was not worked with success. A second cable was laid in 1865, the famous *Great Eastern* steamship being utilised on the occasion, but the cable broke amid-ocean, and for the second time failure had to be written in respect to the scheme for connecting England and

America by telegraph. The following year, however, a further attempt was made with complete success, for not only was a new cable laid, but the one of the previous year was picked up and spliced into two Atlantic cables, were finished at the same time. There are now 26 cables across the North Atlantic, mostly controlled by the Commercial, Anglo-American, and Western Union companies. Two of the 26 cables are French and two German. A general system of half rates for deferred telegrams is in operation between British Dominions and the United States.

Atom is the unit of matter, the smallest indivisible particle. The atom of hydrogen gas is the lightest of all atoms, and constitutes the unit of comparison.

Atomic Theory was first formulated by John Dalton at the beginning of the 19th century. Later experiments have shown that atoms consist of "specks" so extraordinarily minute as to be truly countless. An atom of radium contains 700 "electrons," an atom of radium 150,000.

Atrium was a square covered central court of a Roman house, with double rows of columns round it, and in the middle of the court was a cistern, while the walls and floors were usually of marble.

Atropa, a genus of plants possessing poisonous properties, the best known variety of which is the "deadly nightshade" of Britain.

Attainder is a term for the taint that attaches to a person or to his estate after he has been convicted of treason or felony and sentenced to death. Up to 1843 it involved the forfeiture of lands.

Attar (or Otto) of Roses is an essential oil of roses prepared in the East, and costly. It takes 200 lbs. of roses to produce 1 oz. of attar.

Attorney, one who acts for another in legal matters, a term generally used to designate a lawyer or solicitor as distinct from a barrister. Attorneys cannot appear for clients in a superior court.

Augsburg Confession, the chief standard of faith in the Lutheran Church was drawn up by Luther and other Wittenberg Protestant theologians to present to the Emperor Charles V. in 1530, in the cathedral at Augsburg.

August, named after the Emperor Augustus, because it was his "lucky" month.

Auk is the name given to a genus of swimming birds, now extinct. It lived in the temperate region of the North Atlantic, and bred largely on St. Kilda. The female only laid one egg a year. The eggs, of which some 66 or 67 are known to exist, realise very large prices when offered for sale.

Aulic Council, the personal council of the old German Emperors, superseded by the Confederation of the Rhine in 1806.

Auricular Confession is the personal declaration of "mortal" sins to a priest in order to obtain absolution.

Aurora Borealis, or Northern Lights, are seen both in the Northern and Southern Polar regions. The centre of the meteoric arch corresponds probably with the magnetic north, and the phenomenon is generally seen two or three hours after sunset. It is constantly moving, but may remain visible for several hours. When the rays are very bright, they are of varied colours—green, rose, violet, etc.

Austerlitz, Battle of, was fought near Brunn, in Moravia, on December 2, 1805, when Napoleon, with 70,000 men, defeated the forces of Russia and Austria, numbering 95,000.

Auto-da-Fé, or Act of Faith, was the ceremony connected with the execution of heretics under the Inquisition of Spain and Portugal, the persons condemned being burned alive. The king and court generally attended in state.

Autograph Collections are very numerous in these days, the rage for putting together the actual writings of distinguished people having led to a regular traffic in such things in recent years. Large sums are paid for scarce autographs of eminent people. An autograph of Shakespeare was bought by the British Museum in 1859 for £375.

Automata are self-moving machines worked by invisible mechanism, and have existed since 400 B.C.,

when Archytas of Tarentum invented an automatic pigion. The most perfect constructor of modern automata was Vaucanson, who, about 1740, invented a flute-player and a duck that could eat, drink, and quack. Kumpeler's chess-player was a celebrated automaton that attracted much attention in the early part of the 19th century. In toyland, automatic contrivances of a very ingenious kind are common. In recent times Mr. Mackelvie has made and exhibited in London automata of wonderful ingenuity.

Autonomy denotes the right of self-government, and was first used in reference to the municipalities of ancient Greece, where the right of separate government was allowed.

Autumn, the third season of the year, begins with the autumnal equinox about September 22, and ends on December 21, but the term is generally understood as covering the period between the middle of August and the middle of November.

Avalanches are of four kinds. (1) Powdery avalanches, consisting of snow which has become loose and dry from long frost. (2) Creeping avalanches, which are loosened by Spring, but, being on a gentle slope, creep down slowly by the force of their own weight. (3) Glacier avalanches, masses of ice which split off in summer with a great noise, and go tearing down a precipice to be smashed to pieces at the bottom. (4) The real avalanches of huge accumulations of snow, which are hurled over almost perpendicular walls of rock into the valleys beneath.

Avalon is the earthly paradise of Celtic mythology. **Avebury Temple**, a famous Druidical ruin—probably of the late Stone Age—near Marlborough, in Wiltshire.

Aventina, one of the seven hills of Rome.

Avernus, a lake in Italy whose vapours were supposed to be fatal to birds, and whose sides were so steep that it was deemed the entrance to Hades.

Avesta, the title of the sacred books of the Parsees.

Avoirdupois (avoir de pois, "goods of weight") is used in the United Kingdom for everything except metals, precious stones, and drugs.

Axe, one of the first tools devised by primitive man in all parts of the world. Axes of stone, bronze, and rough iron have been found in the geological strata.

Axiom, a statement of general truth which admits of no dispute.

Azrael, the angel of death of the Turks and Arabs.

Aztecs, the name of a native and powerful race found in Mexico when the Spaniards first discovered that country and with difficulty subdued.

Azymite, an ecclesiastical term denoting such as insist on the use of unleavened bread in the administration of the Sacrament of the Lord's Supper.

B

Baal, the god of the sun, and meaning lord, or master, was worshipped by the ancient Chaldeans, Phoenicians, and Assyrians.

Babel Tower, described in Gen. xi. 9, the erection of which led to the confusion of tongues. A version of the story exists among the cuneiform tablets in the British Museum.

Babiroussa, a ferocious wild pig, native of the Celebes, sometimes called the horned-hog, from the fact that the long upper tusks, growing upwards, pierce the upper lip and curve backwards like the horns of some of the ruminants. It is longer-legged than ordinary swine.

Baboo, a term signifying "Mr" or "Sir" among Bengali Indians, and often used to indicate a native who tries ineffectively to write English, hence the expression Baboo-English.

Baboon, a species of monkey, ranking next to the apes, with short tails and large heads. The common baboon is a native of Guinea.

Babel Tree, an Indian tree of the acacia order, yielding an extremely hard wood largely used for railway sleepers, and also producing an edible and medicinal gum.

Babylonian Captivity of the Jews captured by Nebuchadnezzar at the taking of Jerusalem in 586 B.C.

lasted upwards of 50 years, until Babyf'n was in turn taken by Cyrus.

Baccarat, a French card game played by 4, any number of betters and a banker.

Baccharis, an oil-yielding plant, of many species, distributed over the Western Hemisphere widely. Plowman's spikenard is perhaps the best known variety in this large genus, and the resinous product of local species is used medicinally in Brazil for febrile and rheumatic disorders.

Bachelor, an ancient word of obscure origin and varied meaning. Was early in use in connection with University degrees. Pope Gregory IX. introduced the term to denote the passing of the first grade in the academic course in the University of Paris in the 13th century. Later it was applied to single men generally, and in some countries taxes have been imposed on men who remained bachelors.

Bacillus, the leading division of the group of minute plants named bacteria, and including the *tubercle bacillus*, the cause of consumption. Other bacilli are the *bacillus diphtheria*, causing diphtheria; *bacillus pestis*, causing the plague; and others, including leprosy, glanders, etc. (See **Bacteriology**.)

Baconian Philosophy, the inductive philosophy of which many maintain that Lord Bacon was the founder; more widely "Baconian" means anything pertaining to Francis Bacon, Lord Verulam (1561-1626). (See the *Biographical Section* of "Pears' Cyclopaedia.")

Bacteriology is the science of Bacteria, founded by Pasteur, and comprising what is called the "germ theory" of disease. Dr. Koch has been another eminent worker in the same field, and the discoveries resulting from scientific effort in this direction are of the utmost importance. Bacteria are the causes of fermentation and putrefaction, and in time, as far as disease is concerned, may be exterminated. To experiments in the science of bacteriology we owe our fuller knowledge of sanitary principles and of preventive hygienic measures, as well as of the active principles of agriculture, brewing, etc.

Bactris, a genus of palms common in the marshy places of the tropics and certain parts of America. The long slender stems are largely converted into walking-sticks, and the Tobagocane is a *bactris* exported in considerable quantity from Jamaica for this purpose.

Badger, a carnivorous animal of the Otter family, but very easily tamed. Of nocturnal and burrowing habit. Badger-hunting is an exciting sport.

Badges are a part of heraldry, and in early times usually bore some allusion to the wearer's name or office, or some incident in his career, and were worn by retainers as a kind of livery.

Bagavels, a right of levying duty on all goods entering Eborac for sale, granted by Edward I., the proceeds to be devoted to public purposes.

Baggala, a two-masted boat of about 200 tons burden, used in the Arabian seas for commerce and formerly for piracy; "dhow" was an alternative name given to these fleet vessels.

Bagiments Roll was that by which the Scottish clergy were taxed prior to the Reformation.

Bagous, a genus of marsh beetles, of the weevil family; there are several British species.

Bagpipes, a musical wind instrument, chiefly played in Scotland and Ireland, and comprising bellows and pipes. In Assyria, India, and China, a form of bagpipes was in use in ancient times, and in Italy they are common at the present day. All the Highland Regiments have their bands of pipers.

Balkalite, a dingy green mineral, found near the great lake in Asiatic Russia from which it takes its name; it is a variety of pyroxene, allied to salinite.

Balloy comprised all the space within the outer walls of a castle except the keep.

Bailie is a Scottish term for the magistrate of a municipal corporation or royal burgh.

Bailiwick, an ancient legal term denoting the limits of a bailiff's jurisdiction.

Bairam, a great festival of Mohammedan countries

in a sense analogous to the Christian Easter, and following upon the four weeks' fast of the Ramadan.

Bakshiah, the Eastern term for "a present" or gratuity; its bestowal is very often cunningly contrived by servants or officials.

Bala, Bala, the Silurian group of rocks near Bala, N. Wales, composed chiefly of sandstones and shales and rich in limestone fossils.

Balance, a form of lever supported in the centre, and having scales at each end for ascertaining the weight of a substance or goods. Stability and sensibility are the two chief requisites of a true balance; the first characteristic returning the balance to its original position after a weighing has occurred, the second showing a response to the slightest action.

Balcony, a projecting portion of a house, of stone, wood, or iron. Known to the Greeks and Romans, and now general in Italy. Introduced into England in the 15th century.

Baldachin, the silken canopy used in Roman Catholic processions and carried over the Host. Some are of great size, and stationary, that in St. Peter's at Rome being over 200 feet high.

Baldric, an ornamental belt worn across the shoulder or round the waist, in feudal times denoting the rank of the wearer.

Bale, Council of, lasted from 1431 to 1443, and held several meetings of Roman Church dignitaries, the object being the healing of the Hussites. It led to further ruptures, however, causing the deposition of Pope Eugenius IV. in favour of Felix V.; but on the death of the former, Felix resigned and Nicholas V. became Pope.

Baleatic Crane, the crowned crane of the Baleatic Islands in the Mediterranean and the North African mainland, distinguished by its yellowish, black-tipped occipital tuft and by its trumpet note.

Balsen, the name given to a series of horny plates growing and hanging from the palate into the mouth of certain species of whales.

Balista, a large military engine, of crude contrivance but considerable effectuality, anciently used for hurling missiles in war by the Romans and others.

Ballad, a term used originally in regard to popular songs of war or romance, and only properly applied to simple compositions in narrative form such as those included in Bishop Percy's famous *Reliques of Ancient English Poetry*. Scott, Lewis, Coleridge, Keats, and in later times Tennyson and Swinburne, have all produced effective pieces of the old ballad form. The term ballad is given to songs in general so long as they are simple in theme and construction.

Ballast is weighty matter placed in the bottom of a ship for balancing purposes, and varies in amount with the build, the size, and the cargo of a vessel. Water is now in general use for ballast.

Ballet was admitted into the old Greek religious exercises, and also formed part of the Roman pantomime, when a story was represented by ballet action. France adopted the ballet in the 16th century, and it was greatly patronised by Henry IV. and Louis XIV. Ballets were highly popular in the early part of the 19th century in connection with operas, and many dancers of note took part in them—Taglioni, Fanny Essler, and others. An active revival of the ballet has taken place in Europe and America in recent years, consequent mainly upon the passionate and intense style of dancing practised with so much acceptance by members of the Russian ballets, Anna Pavlova and Tamara Karsavina being among the chief exponents of this style of dancing, while Maud Allan, the American *danceuse*, has won much fame for impersonation dancing. Elaborate spectacular ballets form a mighty attraction at the Empire, the Palace, the Alhambra, etc., in London.

Ballistic Curve, the actual course taken by any projectile upon discharge.

Balistraria, a cruciform aperture in the walls of a fortress, through which the archers fired arrows.

Bellum, originally the outer bulwark of a strong-hold; subsequently the courtyard comprised within such outer bulwark, including sometimes the quarters of the garrison, the church, and other building.

Balloon. (See **Aerial Navigation**.)

Ballot, or secret-voting, was in use to an extent under the Greeks and Romans, and was advocated in England in the 17th century. It was not until the 18th century, however, that the idea came to be adopted as part of a political programme. Test ballots were taken at Manchester in 1869, and the first London School Board was elected by ballot in 1870. Then followed Mr. W. E. Forster's Ballot Act of 1872, since which date all Parliamentary and municipal elections have been by ballot. Previous to this the ballot system had worked with advantage in Australia, France, and other countries, and in England it makes distinctly for purity of election.

Balsa, a fishing raft or boat, used chiefly along the Pacific coast of South America.

Balsam, the name of a wide genus of plants bearing handsome flowers. A term given also to certain liquids and substances used as ointments or unguents and mostly obtained from trees. Thus, the old Balm of Gilead was from the bark of certain shrubs growing in Egypt and Arabia Felix.

Baltimore Bird, a lively black and orange plumaged starling of the oriole sub-family extending from Brazil to Canada; builds a well-constructed hanging-nest.

Balusters are small pillars, short distances apart, made of metal, stone, or wood, used as supports for cornices, etc., or for enclosing stairs. A range of balusters and that which they support are called a balustrade.

Balsamine, a light dress material, of mixed cotton and worsted manufacture.

Bambino, the name given to an image of the Infant Christ in the church of the Ara Coeli at Rome, and supposed to possess miraculous powers.

Bamboos, a genus of strong grasses, growing from 50 to 60 feet high, and much used by the Chinese for all kinds of purposes. The shoots of some species are tender and esculent; the short canes are used as walking sticks.

Bampton Lectures were instituted by the Rev. John Bampton, who left £120 a year (since considerably increased) for an annual course of divinity lectures to be delivered at Oxford in St. Mary's Church, and to be published within two months of their utterance. Only Oxford and Cambridge M.A.'s are eligible. Heber (1815), Whately (1822), Milman (1827), Hampden (1832), Mansell (1858), Liddon (1866), and Canon Gore (1871) are among the eminent divines who have filled the position of Bampton Lecturer.

Ban, though otherwise used in ancient times, is now a term applied to a proclamation of outlawry, and in some senses is equivalent to a curse.

Banana (*Musa sapientum*), a large herbaceous plant cultivated in tropical and semi-tropical regions in great abundance, and one of the most productive plants known. The fruit of the banana is the staple food of the natives in many of the Pacific Islands, and of late years has been largely imported into England, great quantities now coming from Jamaica and other West Indian islands. Compared with wheat, the productiveness of the banana is as 133 to 1, and as against potatoes 44 to 1. Fresh bananas to a value approaching two millions sterling are now imported into this country.

Banco, sittings in, those of a Superior Court of Common Law in full session, distinguished from the proceedings of the judges at *Nisi Prius*, or on circuit.

Band of Hope, an organisation possessing over 30,000 branches, founded in 1855 for promoting temperance principles among children.

Bandana, the name given to a red spotted handkerchief usually made of cotton, but formerly only applied to silk handkerchiefs of that colour and design.

Bandicoot, an Australian burrowing animal, of rat-like appearance, which carries its young in a pouch. The Indian *Mus pringiatus*, as large as a rabbit, is also called a bandicoot. The oriental animal is a grain feeder, and the name signifies really "pig-rat."

Banner, a flag indicating rank, office, or command, including the standard or national banner, regimental colours, a ship's flag, pendant, ensign, etc.

Banneret, a grade of knighthood conferred by the sovereign for some heroic act on the field of battle, and so called from the fact that the knight was given a banner in exchange for his pennon.

Bannock is cake made of barley meal, much favoured in Scotland, and distinct from the cake of oatmeal.

Banns of Marriage are public proclamations of intention of marriage, and must be announced in Church on three successive Sundays; then, if no just cause or impediment be advanced against the union proposed, it can take place at any time within three months.

Banabee is a figure in Irish superstitions, supposed to give warning of death.

Bantu is the name of a group of African languages spoken by Zulus, Kafirs, and others.

Banyan is the name of a curious tree of India and Ceylon. Its peculiarity is that it throws off shoots from its main branches that grow down and take root in the ground as separate stems.

Baobab, or Monkey-bread tree, is found in West Africa. Its trunk sometimes attains a girth of 70 feet, and there are specimens supposed to be thousands of years old. Yields a pulpy fruit from which a drink is made, and the dried leaves are eaten.

Baptism is a rite practised, either with infants or adults, by almost all Christian sects except Quakers. In the Church of England the baptism of infants is regarded as the act by which they are admitted "unto the visible Church of Christ." The Baptists perform the rite only with adults and by the immersion of the entire body.

Baptistery, a building or portion of building devoted to the rite of baptism. The most famous baptisteries are those of Florence and Pisa, erected in the Middle Ages, which are detached from their mother churches.

Baptists came into notice at the Reformation. For a time they suffered much persecution, but gradually made headway by their zeal and sincerity. To-day this sect is spread over all parts of the Protestant world, though not always in large communities. They are strong in the United States. Throughout the world the Baptists have over 6,000,000 communicants, over 400,000 being in England and Wales.

Barbarian in the times of ancient Greece meant anyone who could not speak Greek. Now the term is applied to savage or uncivilised people generally.

Barbary Ape is a small species found on the rock of Gibraltar, its ancestors having probably been brought from Barbary. It is the only kind of monkey existing in Europe.

Barbel, a well-known European river fish, deriving its name from a sort of beard hanging from its jaws.

Barberry, a berry-producing shrub, typical of the genus *Berberidaceae*. Grows in a large compact bush, and bears bright red berries growing in clusters.

Barbers are an ancient and honoured fraternity. There was a Guild of Barbers long before 1301, when we get the record of Richard le Barbour being appointed Master, to have "supervision over the trade." In the time of Edward IV. they were the only persons who practised surgery; hence the old title barber-surgeons. The London Barbers were incorporated in 1462, and a rival Company of Surgeons of London was afterwards set up. In time the latter only were permitted to act as surgeons, although even then the barbers might follow "blood-letting and drawing teeth." The barber's pole is a relic of the barber-surgeons' days, the fillet representing bandaging.

Barbette, an elevated platform in fortresses or on war-vessels from which heavy guns are fired.

Barbican, a fortified entrance to a castle or city, with projecting towers. In the London street called Barbican there was formerly a barbican in front of the city gates.

Barcarolle, a Venetian gondolier's song with an easy swaying movement, and applied to instrumental as well as vocal compositions of the same character.

Bard was the name used among the ancient Celts to denote a poet or minstrel, and their mission was to sing of heroic deeds. They were supposed to have

the gift of prophecy, and were exempt from taxes and military service.

Bardesey Island, off North Wales, is the remote home of a singularly isolated community. Bardesey is roughly two miles in length by one in width. The inhabitants, who occupy some dozen well-built and comfortable farmhouses, divide the calling of farmers and fishermen. Bardesey is the property of Lord Newborough and was a favourite resort of his grandfather, who was buried on the island in 1888.

Barbones' Parliament, so called from the nickname of one of its members, "Praise-God Barbones." It was specially selected by Cromwell, and sat from July 4th to December 13th, 1653.

Barges are generally flat-bottomed boats, but the term is applied to most slow-moving river boats, from royal state barges to house-boats, and sometimes to "lighters" and "keels" employed in canal and other waterway goods traffic.

Barilla, a soda carbonate obtained from the burning of plants in salt marsh lands, once in great demand but now little used, having been superseded by a carbonate produced from common salt.

Barium, a metal usually occurring as sulphate of barium and carbonate of barium, but recently obtained by powerful action. Sir Humphry Davy having passed a strong electric current through chloride of barium to obtain it. It is white, lustrous, and heavy.

Bark, the external covering of trees, comprises the cuticle or *epidermis*, the outer bark or *cortex*, and the inner bark or *liber*. It is applied to many uses, and numerous kinds, rich in tannin, are utilised for tanning purposes. Various species of oak bark are most used in Europe; in North America, the hemlock spruce; and it is the presence of pasture and hemlock spruce forests round Quebec that has caused large leather trade. Many barks are used as medicines.

Barley, a cereal plant whose grain is chiefly used for malting purposes. There are several species, but in the United Kingdom the spring barley, the long-eared, and the winter kinds are mostly cultivated.

Barlow Lens, a modification of the object-glass of the telescope, increasing its magnifying power without the loss of light which would ensue from the use of an eyepiece of shorter focus. Named after Mr. Peter Barlow, Professor of Mathematics at Woolwich, 1806-1847.

Barnacle is a kind of crustacean, often found in large numbers attached to the bottoms of ships, rocks, or timbers, under water. There is also a species of goose called the barnacle.

Barometer, an instrument for measuring the weight or pressure of the atmosphere, and was invented at Florence by Torricelli, pupil of Galileo, in 1644. Ordinarily, it is a glass tube 3 ft. long, filled with mercury, and inverted into a vessel also containing mercury, this causing the liquid in the tube to descend a few inches, leaving a vacuum at the top. The pressure at all points in the same horizontal plane of a liquid being equal, the surface of the mercury, after the inversion of the tube, cannot remain in one plane as when the atmosphere is pressing equally, but must rise when the air gets heavier and fall when the air gets lighter. Gay-Lussac's barometer is siphon-shaped, with two scales graduating in opposite directions to a zero point: Bunters's is a slight improvement on this. (See also *Aneroid*.)

Baronet is a title instituted by James I. The first baronet was Sir Nicholas Bacon, but numerous others were made about the same time, the fee charged for the honour in each case being £5,000. It is the lowest of hereditary titles, and is pretty freely dispersed among those who distinguish themselves in trade, industry, politics, or special civic service. James I. placed the limit of number of baronets at 200. To-day there are in Great Britain over 1,200.

Baron of Beef is a double sirloin, not often seen in these days, but common in olden times at court and civic feasts.

Barons. The first baron created by letters patent in this country was John Beauchamp de Holt, Baron of Kidderminster, on Oct. 10th, 1387. Of course there

were barons long before that; but the origin of the rank is more or less lost in antiquity, along with that of the name. It has been derived from the Latin "baro," signifying "a simple or foolish man, a block-head." The old German "bar," meaning "man," is considered more probably the origin. Sicut connects it with the verb "to bear," suggesting that the first meaning was "bearer," "porter." In old legal diction, "baron et feme" merely meant "man and wife."

Barque, a three-masted vessel without a mizen top-sail. The term, however, is often applied to almost any small ship.

Barracks are buildings for the lodging and accommodation of soldiers, officers and men, and exist in all towns where bodies of troops are stationed. It was not until towards the end of the 18th century that barracks began to be erected, and even down to the close of the French War in 1815 the provision in this direction was very defective. After the Crimean War the barrack system was thoroughly re-organised, and in London, at Aldershot, and in the garrison towns many fine and extensive barracks have been put up in recent years.

Barrel Organ, a musical instrument in which the music is made by a barrel or cylinder, set with pins and staples, which rotate so as to open the valves for admitting the wind to the pipes. Though common at one time, they are now largely superseded by piano organs.

Barriolades are temporary street fortifications usually erected by insurgents at times of revolution, and the most notable have been those of Paris. In 1830, 1848, and during the Commune disturbances of 1871 they were much resorted to, and were the scenes of many sanguinary conflicts.

Barrister is a person qualified to practise at the English or Irish Bar. A barrister in practice in England must be a member of one of the four Inns of Court—Lincoln's Inn, the Inner Temple, the Middle Temple, or Gray's Inn. Admission is obtained by passing certain examinations, keeping twelve terms (extending over 3 years), and paying certain fees. The ranks and degrees of barristers are 1. Barristers ordinary, who wear stuff gowns; 2. King's Counsel, who wear silk gowns, and are admitted within the Bar; and 3. Serjeants-at-law, an order now practically extinct, no fresh appointments having been made in recent years.

Barrow is an ancient artificial earth-mound supposed to be a burial-place, and found in many parts of Europe. There is one at Silbury Hill, near Marlborough, which covers over 5 acres, and rises to a height of 120 ft. Sometimes they are formed of stones, and receive the name of cairns. The Roman tumulus was of a similar description.

Bar sinister, a term often improperly used to describe the two diagonal lines drawn from left to right, from the sinister chief to the dexter base of an heraldic shield, and supposed to be a mark of illegitimacy. The right term is "bend sinister," and it is not absolutely certain that the illegitimacy interpretation is the correct one.

Bartizan is a small battlemented turret at the top of a tower.

Basalt Rocks are dark coloured, and of igneous origin, and occur either in lava currents, as at Mull and Staffa, or as intrusive sheets, like the Edinburgh Castle Rock and Salisbury Craig. One of the most noted examples of basaltic columns is that of the Giant's Causeway in Ireland.

Basanite, a smooth black siliceous mineral, or flinty jasper; a crypto-crystalline quartz, sometimes styled the Lydian Stone. An alloyed metal being rubbed across basanite, the mark of colour left will indicate the nature and depth of the alloy, hence it obtains its name, which signifies, in Greek, "a touchstone."

Base, a chemical term denoting that which combines with an acid to form a salt. It is always a compound body, and the oxide of either a metal or of an elementary group possessing the power of a metal.

Basili Council of, was the last of the three great Reformation Councils held in 1431-1443.

Bashi-Bazouks, irregular Turkish troops, consisting of a rough but brave class of men from the Asiatic provinces.

Basilisk is a kind of lizard of aquatic habits, possessing an elevated crest (which it can erect or depress at will) running down the centre of its back.

Basques are an old race living in the Pyrenees, with a language of their own, different from all other languages, and enjoying ancient privileges of a curious kind.

Bas-Relief ("low relief"), a term used in sculpture to denote a class of sculptures, the figures of which are only slightly raised from the surface of the stone or clay upon which the design is wrought.

Bass, a genus of fish with spiny fins, of the Perch family, found in the sea only in Europe, but inhabiting fresh waters in America.

Bassoon, a musical wind instrument of three octaves, the bass of the reed band. Invented by an Italian canon in 1539.

Bastille, a term originally used to denote any old French castle, but gaining its chief significance by being the name of the former State prison of Paris, destroyed by the mob on the outbreak of the French Revolution in 1789.

Bastinado, a beating, administered on the soles of the feet, formerly used with great frequency in China, Turkey, and elsewhere in the Orient.

Bastion, an earthwork standing out from a rampart, of which it forms a principal part. Usually five-sided, the fifth side opening into the interior of the fortification. The front face of an ancient Roman bastion was generally convex and semicircular.

Bat, an order of mammals, with fore-limbs held together by a membrane that serves the purpose of a wing. It has small eyes and large ears, and is of nocturnal habits, only emerging from its concealment at the approach of darkness. Bats are mostly insectivorous. The Vampire-bat, which sucks the blood of sleeping animals, occurs only in South America.

Bath Brick is made exclusively at Bridgwater, Somersetshire, and there only because the river Parrett deposits, for a distance of a few hundred yards, the peculiar compound of sand and slime of which its familiar blocks are composed. Farther up the stream the silt contains too much mud; lower down the proportion of sand is too great. Every ebb, therefore, the workmen remove the soil from this favoured spot which Dame Nature has placed there with the previous tide.

Bath, Order of, was established by Henry IV. in 1599, and is the second in rank of English knightly orders, the Garter coming first. At first it was a military order only, but since 1847 has had a civil division also. In the Order are three classes: G.C.B., or Knight Grand Cross of the Bath; K.C.B., or Knight Commander of the Bath; C.B., or Companion of the Bath. Companionship of the Bath does not carry knighthood or entitle to the prefix "Sir." The King is the head of the Order. The badge is a crimson ribbon and star, with the motto "Tria juncta in uno."

Bathos is an unconscious lapse from the sublime to the trivial, and is often the result of over-eagerness to be impressive.

Bath-stone is a kind of limestone found in quarries near Bath, and of the oolite formation. It is soft and easily worked when "green" from the quarry, and becomes hard with exposure in suitable places.

Batrachia, an order of amphibians, of which frogs and toads are typical representatives. The young of these animals are tadpoles, and grow from eggs or spawn, at first living entirely in the water. The subsequent developments, including the substitution of lungs for gills, are rapid and interesting.

Battalion, a body of infantry, 1,066 strong on a war footing, and organised in eight companies, and commanded by a lieutenant-colonel, assisted by two majors, an adjutant, eight captains, and sixteen lieutenants. Two or three battalions may be combined to form a brigade.

Battering Ram, a military apparatus mounted on wheels, and composed of a heavy, iron-bound beam,

which was impelled with great force upon the walls of a beleagued place.

Battery, a number of cannon with their equipment of men and horses. A field or horse-battery usually comprises six guns, a mountain-battery four 7-pounder guns, a siege-battery four heavy guns. The equipment in men and animals varies, however, according to circumstances.

Battle-axe was the great weapon of defence in early times, but it gave way to the arrow and spear.

Battlement, a raised wall running along the top of a building, with embrasures through which an enemy could be fired upon. At first solely military, later it was frequently used as an architectural ornamentation.

Battles involving immense slaughter have been fought in recent wars, but past records reveal even more serious carnage. In the wars of the French Revolution and those of Napoleon, which surged backward and forward over Europe from 1793 to 1815, it is estimated that the French lost two millions in killed alone. In nine of the battles in which Napoleon himself took part, the losses were as follows:—

Battle.	Men engaged.	Killed and wounded.
Austerlitz . . . 1805	148,000	25,000
Jena . . . 1806	98,000	17,000
Eylau . . . 1807	133,000	42,000
Friedland . . . 1807	142,000	34,000
Eckmühl . . . 1809	145,000	15,000
Wagram . . . 1809	370,000	44,000
Borodino . . . 1812	263,000	75,000
Leipzig . . . 1813	440,000	92,000
Waterloo . . . 1815	170,000	42,000

In the Peninsular War, England left fifty thousand dead and the French a quarter of a million behind them in Spain. At Salamanca we lost 15 per cent. of our troops, and at Albuera 65 per cent. In the Crimea the total losses of Russia and the Allies were put at 480,000, and Britain lost 22 per cent. of her men; but there were no great decisive battles with enormous slaughter. The American Civil War, which lasted from 1861 to 1865, involved a loss of six hundred thousand men. In a frontal attack by General Grant at Coldharbour, in 1864, ten thousand men fell in less than ten minutes. The following were the losses in the chief battles:—

Battle.	Men engaged.	Killed and wounded.
Sharpsburg . . . 1862	128,000	21,910
Fredericksburg . . . 1862	190,000	26,971
Chickamauga . . . 1863	128,000	35,100
Gettysburg . . . 1863	162,000	37,000
Wilderness . . . 1864	170,000	20,000

In the campaign of Sadowna, which lasted only seven weeks, the casualties numbered 57,000, or over 8,000 a week. The chief battle was that of Königgratz, where the forces engaged were 417,000, and the killed and wounded 26,000. In the seven months of the Franco-German War, 1870-71, the killed and disabled numbered 371,751. A million Germans and 710,000 Frenchmen took the field, and the following were the casualties:—

	French.	Germans.	Total.
Killed	41,000	19,782	60,782
Died of wounds . . .	36,000	20,710	56,710
Died of sickness . . .	45,000	24,239	69,239
Disabled	116,000	89,000	205,000

Totals . . . 238,000 233,751 371,751

In four of the principal battles the following were the results in killed and wounded:—

	French.	Germans.	Total.
Woerth	32,000	11,000	43,000
Mars-la-Tour . . .	26,000	16,900	42,900
Gravelotte	28,500	20,200	48,600
Franz	30,000	13,300	43,300

In the Russo-Turkish War of 1877-78, with a total loss of nearly 200,000, the only notable battle was before Plevna, when in the course of a protracted siege there fell in a single day 28,000 out of 80,000 Russians engaged. In the more recent Russo-Japanese War many of the battles were of the

most deadly character. At the battle of Liau-yang the Russian losses in killed were nearly 20,000, and the Japanese losses about 18,000. At Sha-Ho, the Russian casualties were estimated at 60,000, the Japanese at 10,000; and the battle of Mukden, in which nearly a million soldiers were engaged, was even more sanguinary. It is too soon to give accurate figures in regard to the battles of the present war (1914-15), but the engagements have been enormously more fatal than those of any previous war recorded in history. In less than twelve months more soldiers have been killed than in all the Napoleonic battles put together, and one single battle is responsible for the loss of more lives than were sacrificed in the entire Boer War, the numbers engaged and the terribly destructive character of the guns, shells, bombs, and other instruments of death being of a scale and of a power never before brought into play.

Battle is the term applied to the modern practice of employing beaters to force game to a certain point where sportsmen are in waiting with guns to shoot it.

Bauble, a short stick or wand, surmounted by a representation of a human head, ass-eared, carried by the fools and jesters of olden days.

Bauxite, a mineral, mainly consisting of the oxides of iron and aluminium.

Bawbee, an old Scotch copper coin, equivalent to one halfpenny of to-day.

Bayeux Tapestry is believed to have been wrought by William the Conqueror's Queen, Matilda, and represents 72 scenes relating to the Norman Conquest. It is 230 feet long by 20 inches wide, and was executed for Bayeux Cathedral.

Bayonet, a weapon taking its name from Bayonne, where it was first made about 1660. It was originally fitted into the gun-barrel, but General Makay, in 1680, introduced the socket-bayonet, which allows the gun to be fired with the bayonet fixed.

Bay-salt, a coarse kind of salt obtained from the salt marshes of certain parts of the English and other coasts, and drawn from sea-water allowed to settle in saltens or salt ponds.

Bay-window projects and is usually semi-octagonal or semi-hexagonal in plan; the bow-window forms the segment of a circle.

Bedellium, a kind of gum-resin formerly used in medicine. It is of bitter taste and strong odour.

Bedelometer, a cupping-glass, fitted with a siphon and exhausting syringe; substituted in surgery for the employment of the living leech, and preserving for examination the blood drawn.

Beacon, a fire-signal, given from the top of hills, was much in use in early times. According to the *Iliad*, Agamemnon thus signalled the fall of Troy to Mycenae; and the English signalled the approach of the Spanish Armada. On many prominent parts of our coast, and on inland heights, beacon-pans were erected when a French invasion was feared.

Beads have been used as personal ornaments from the earliest times, valuable specimens having been found in the tombs of the ancient Egyptians. They are made of various materials, from precious stones to glass. In the latter form they have been and are much used as objects of barter in dealing with uncivilised races.

Beagle, a small hound that tracks by scent, and formerly used for hare hunting.

Beans are the seeds of certain foot-plants of many varieties, and include the common bean, the French bean, the kidney bean, or haricot. India and South America yield special species. All beans possess a high proportion of nutritive qualities, the common bean excelling wheat in that respect. The Greeks and Romans used white and black beans in balloting for magistrates, the black meaning an adverse vote.

Bear, a genus of mammals of the *Plantigrade* section of carnivora, using the entire sole of the foot in walking. Found in most parts of the globe except Australia. The common brown bear was once spread over the whole of Europe, including England, but now is confined to the northern forests of Europe and Asia. The black bear of America

is nearly allied to the brown species. America has also a larger kind, the grizzly. In the Arctic regions the polar bear forms a distinctive species, and differs from the rest in being exclusively carnivorous. The other bears feed mostly on roots, fruit, honey, etc. Bear-baiting was one of our "Old English sports," but was made illegal in 1835.

Bear-blind, the English name for *Calyptrogon*, a genus of convolvulus, called also "hooded blind-weed."

Beard is one of the distinctive signs of manhood, and was regarded as a sacred possession by ancient races. The Jews were proud of their beards and wore them through the days of their Egyptian bondage, though the Egyptians shaved. The Greeks and Romans of the ancient days mostly shaved, and the term barbarous (beard-wearing) was applied for a long period to people who were considered out of the pale of polite society. Still, beards were largely worn even then, and came to be associated with wisdom. Alexander the Great prohibited beards among the soldiery, and soldiers in all countries have since been generally headless. Beards have been taxed occasionally, as in Russia by Peter the Great, and at an earlier date in England. In modern times beards have been worn or unworn as a mark of male leader has, for no particular reason, so the example of shaving of the beard continues to be largely practised in all ranks of life in this country, though the moustache, once despised by the English, has now been in vogue for many years. Bearded women occur occasionally, and have sometimes been exhibited.

Beau-ideal is a conception of the mind, of some perfect object free from all shortcomings.

Beauxite. (See *Bauxite*.)

Beaver, a genus of mammals of the *Rodentia* order, with short, scaly ears, and webbed hind feet. It attains a length of from 24 to 4 feet, and lives in communities where possible, as in North America, constructing dams and habitations. Beavers are found in Russia and Poland. Beaver skins are of considerable commercial value, but are not imported as largely as formerly, other skins besides that of the beaver being now used for hat making.

Bed of Justice, the seat occupied by French kings in their House of Parliament, but not used later than 1787, by Louis XVI. at Versailles.

Bedchamber, *Lord's of the*, are twelve members of the royal household, who wait in turn upon the Sovereign on State occasions. They are controlled by the Groom of the Stole. Each lord receives £1,000 a year, and the Groom of the Stole £2,000.

Bedford Level comprises parts of Norfolk, Suffolk, Huntingdon, Northampton, Lincoln, and Cambridge, generally called the Fens, 70 miles long and 20 to 40 miles broad. It was waste until reclaimed and drained by two Dukes of Bedford in the 17th century, but now is for the most part fertile agricultural land.

Bedlam (a corruption of Bethlehem) was a priory in Bishopsgate, afterwards converted into a hospital for lunatics. The asylum was transferred to St. George's Fields, Lambeth, in 1815. The term "bedlamite" came to be applied to any person behaving like a madman. (See *Abraham-men*.)

Bed-mouldings, the mouldings of a cornice in Roman and Grecian architecture occurring immediately beneath the corona.

Bedouins are Arabs who live in tents and are spread over the whole of Northern Africa and Western Asia. They are divided into independent tribes, each governed by its own sheikh. They live on their flocks and herds, rice, etc., and are prone to robbery. Supposed to be the descendants of Ishmael.

Bedrope, an ancient term signifying the day's work in harvest-time exacted from tenants by their overlord in the feudal period.

Beds are of ancient origin, and came in with civilisation. In ancient Egypt, Greece, and Rome they were used, and the form has remained much the same in all ages. The Anglo-Saxons had wooden beds in recesses, the bedding being of straw. The "four-poster," which remained the model for many centuries, was introduced in the 16th century, and many

handsome specimens of carved and heavily draped beds of this kind, on which kings and queens have slept, are still preserved. At the Kye House they show the Great Bed of Ware, capable of accommodating a dozen people, and said to have belonged to Warwick, "the King-maker." It is of oak and bears the date of 1499. Within the last half-century, metal has come into general use for bedsteads—iron, brass, and steel being used. The advantages they possess are many. In the matter of bed equipment—bedding, mattresses, etc.—the improvement has been marked in recent years. The old-time feather-bed still remains for those who appreciate the luxury, but health is best promoted by harder substances.

Bee, a familiar family of insects of the *Hymenoptera* order, mentioned in the Bible and by many writers of antiquity, and a most interesting object of study. Aristotle and Virgil in ancient times, and Lord Avebury and Maeterlinck in recent times, have described their industrial queendoms and forms of government. The hives are tenanted by the queen bee; working bees, or neuters, being imperfectly developed females; and drones, males. The workers do all the honey gathering and storing, and the constructing of the cells, which are divided into store cells and egg cells, the queen—and there is but one queen to a hive—only lays eggs and governs, obtaining complete obedience from the workers. The drones form less than one-tenth of the population of the hive, and their lives are over in about three months. At the proper time, and then only, the queen quits the hive for her "nuptial flight," followed by the drones, which gather round her in the air. After impregnation she returns to the hive, and begins to fulfil her mission of egg-laying, depositing egg after egg at the rate of some 200 a day in the cells prepared for them. The eggs which produce the workers are first laid, then those of the males, and finally those of the females. The process of hatching the perfect insect takes about 21 days. When the new queens arise among the newcomers, the old queen tries to destroy her rivals; and where there are more than one young queen, the same enmity exists between them, and in apiculture they have to be separately guarded and liberated singly at wide intervals. Each queen attracts to herself a swarm of her own, and in this way other bee colonies get formed in fresh hives.

Beech. The common beech is one of the finest of our trees, with massive trunk and smooth, shiny bark. Its horizontal branches, covered with close foliage, make a deep shade. Its wood is rather brittle, but capable of being utilised in the manufacture of many industrial articles.

Bee-eater, a pretty bird of the genus *Merops*, frequent in North Africa, and an occasional British visitor. It has a black-bordered yellow patch on the throat; but is mainly brownish red, with blue markings on the head, and has long tail-feathers of a greenish hue.

Beef-eater is the name given to the Yeomen of the Guard. They originally formed part of the guard of Henry VII. The word is a corruption of *buff-eater*, one who attends the buffet. Their dress dates from Henry VIII., who, some have said, made them dress in thick costumes so that they might look as fat as himself.

Beef Eust Tree, a shrub of the oleander genus, common in the United States (*Shepherdia argentea*), called sometimes also the Buffalo-berry.

Beak, a tool of the pick order, specially designed for the use of miners.

Bealzebub, corruption of Baal or Bel, whom the Philistines worshipped at Ekron.

Beer, a liquor made by fermentation from malted barley and hops. A similar drink was known in Egypt long before the Christian era, and was probably introduced into Great Britain by the Romans. Beer contains from a 10 to 5 per cent. of alcohol. Ale, small beer, and bitter beer are varieties depending on strength and proportion of hops. Porter and stout are prepared like beer, but owe their peculiar flavour to the use of a proportion of malt heated so as to convert part of the sugar to caramel.

Beer-money was payment to non-commissioned officers and soldiers in the English army in lieu of beer or spirits, but abolished in 1873 and pay substituted.

Beesha, a genus of bamboo indigenous to the Malay Archipelago and Chittagong, having the seeds enclosed in a fleshy pericarp.

Beeswax, the secretion of the bee, used for the formation of the cells or honeycomb of the hive; when melted it is what is commercially known as yellow wax, white wax being made by bleaching. Being impervious to water, it acts as a good resistant and is an article of much utility.

Beeswing is a fine filmy tartar formed by age in port and other wines, so called from the fanciful resemblance of the deposit to a bee's wing.

Beet, a genus of plants of the Chenopodiaceae order, and a native of the shores of the Mediterranean, but now cultivated as a food, pickle, and vegetable. The leaves of the white beet are used like spinach. The red variety has a thick root, and it is estimated that 12 per cent. of its whole weight is sugar, hence the rise and growth of beet sugar.

Beetle, an order of coleopterous (or six-legged-winged) insects, comprising over 300,000 different species. They possess two pairs of wings, the hinder ones being, but rarely used for flight. They mainly remain concealed during day-time, and are found on land, in water, on plants, among stones, in the ground, and in wood. They feed on animal and vegetable matter, and have a value in destroying noxious insects and putrefying substances.

Beig or Bey is a Tartar and Turkish title (equivalent to prince, or chief) given to superior military officers and distinguished foreigners. The latter form of the word, bearing an analogous meaning, is commonly met with in Tunis and Northern Africa generally.

Beigum, a Turkish lady of princely rank, or a female relative of a native Indian ruler.

Bahemoth is the name of a large four-footed beast referred to in the Book of Job; probably the hippopotamus, but by some considered to be the elephant, and by others the rhinoceros.

Bahring Sea Arbitration, between Great Britain and the United States, in regard to the seal fisheries, took place in 1893 in Paris, resulting in the sea being declared open beyond the territorial limits, according to the British contention, and in certain restrictions for the preservation of the seals.

Bel and the Dragon is the title of one of the apocryphal books of the Old Testament; or, more precisely speaking, certain supplementary chapters to the "Book of Daniel" of an apocryphal character. First appeared in the Septuagint, but the Jewish Church did not accept it as inspired. In 1546 the Council of Trent declared it to be canonical.

Belfry was in early times a kind of movable tower used in sieges for defence. Gradually the term was applied to any watch-tower or alarm-bell tower, and finally to any tower where a bell was hung.

Belgae, the name given to the Teutonic and Celtic tribes inhabiting certain parts of Gaul and Britain in and before the time of Julius Caesar.

Bell is, literally, "a hollow body of metal used for making sounds." Bells are usually made from bell-metal, an alloy of copper and tin. Small bells used for interior functions are often made of silver, gold, or brass. Ordinary hand-bells are of brass. From the 7th century large bells have been used in England in cathedrals, churches and monasteries. The largest bell in the world is the Great Bell of Moscow, which weighs 198 tons, is 19 feet high and 60 feet round the rim. It was cast in 1653, but fell down in a fire and remained sunk in the earth until 1877, when the Emperor Nicholas caused it to be placed on a platform, and the interior of it is now used as a chapel. The largest bell in use is another in Moscow which weighs 128 tons. The Great Bell at St. Paul's, cast in 1680, weighs 27½ tons, and is the largest in the United Kingdom. Other gigantic bells are the Great Bell at Peking (52 tons); Nanking (22 tons); Cologne Cathedral (25 tons); Big Ben, Westminster (13 tons); Great Peter, York Minster (to tons). The Curfew bell is rung in some parts of

England to this day, notably at Ripon. The number of changes that can be rung on a peal of bells is the factorial of the number of bells. Thus four bells allow 24 and eight bells 40,320. For private houses of any pretensions, hotels, etc., electric bells are now generally in use, the old wire pull-bell being largely superseded.

Belladonna (*Deadly Nightshade*), a well-known poisonous wild plant found in Southern Europe and Western Asia. The alkaloid atropine it contains is valuable in medicine, although a large dose is poisonous.

Bell, Book, and Candle. To curse by "bell, book and candle" was a form of excommunication in the Romish Church ending with the words—"Do to the book, quench the candle, ring the bell."

Belles-Lettres, a term that embraces all descriptions of elegant literature—rhetoric, poetry, history, criticism, philology, etc.

Ben, or Benn, a Gaelic word signifying mountain or "mountain head." It occurs in many places in the British Isles, as Ben Nevis, Ben Lomond. Takes the form of Pen in Wales and Cornwall.

Benedictine, the hymn of the three children in the fiery furnace, used in the morning service of the Church of England when the *Te Deum* is omitted.

Benedictines are followers of St. Benedict, and have at different times consisted of various religious orders, such as the Cistercians, those of Canadotti and Vallambrosa, the Silvestrines and the Celestines, also the Præmonstratensians and the Grandmontensians. They were introduced into England at the beginning of the 7th century, and were called the Black Monks (not to be confounded with the Black Friars, who belonged to the Dominican order) because of the colour of their dress. Several Benedictine monasteries and convents still exist in the kingdom. There were also Benedictine nuns.

Benedictus, a canticle used in the morning service of the English Church, and deriving its name from the first word of the Latin version, *Benedictus*, blessed.

Benefit of Clergy, a privilege allowed in ancient times to clergymen offenders, exempting them from punishment by the ordinary courts and leaving the bishop's court to deal with them. The privilege was extended in Tudor times to all who could prove their ability to read, and Ben Jonson was among those who took advantage of this easy ordeal, after he had killed a man in a duel. Elizabeth withdrew most of the old privilege, however, and in 1827 the system was entirely abolished.

Benefit Societies (see *Friendly Societies*).

Benovolence, a name given to demands made by certain English kings for loans from subjects or corporations. Abolished in 1688.

Benevolence Tree, the old name of the honeysuckle on both sides of the Scottish Border.

Bengal Light is a blue signal-light, used at sea in time of shipwreck, is of nitre, sulphur, and the black sulphide of antimony, in proportions of 6, 2, and 1 respectively.

Bennet Bishop (the 12th January) is the anniversary of the English St. Benedict, usually called Bennet Bishop. He first introduced Gregorian music, glass-making, mullioned windows, and painting, and was foster-father and tutor of the Venerable Bede.

Benthamism, the philosophy of Jeremy Bentham, the essential principles of which were that the end and aim of human life is happiness, as exemplified in the presence of enjoyment and the absence of pain. Communities and individuals, it taught, should strive after the greatest happiness of the greatest number, the effort to achieve the greatest good of all being accounted in itself the highest morality.

Benzene, a compound of carbon and hydrogen, discovered by Faraday, and the starting-point in the production of aniline dyes.

Benzole Acid is produced by heating gum-benzoin and condensing the vapour, and by other means. Of use in bladder diseases.

Benzoin, a gum-resin used in perfume making, and obtained from an East Indian tree (*Styrax benzoin*).

Has numerous commercial uses, and is employed medicinally in chronic lung complaints.

Barberine, a basic substance, extracted from the bark of the greenheart tree of Guiana, valuable medicinally as a febrifuge and tonic in substitution for quinine.

Barbary is the name given to the inhabitants of the mountainous parts of Barbary and the northern portion of the Sahara, who are supposed to be the descendants of the aborigines of North Africa. They live mostly in the fastnesses of the Atlas Mountains, and number about 4,000,000.

Bergamot, an essential oil obtained from the rind of a species of citrus grown in Calabria, and largely used in perfumery.

Berlin Congress, held at the conclusion of the Russo-Turkish War of 1878. All the European Powers were represented, and the Treaty of Berlin was the result.

Berlin Decrees, issued by Napoleon I. in 1806, with the avowed object of destroying the commerce of Great Britain, by setting up a state of blockade against this country.

Beryl, a mineral, of which the emerald is a variety. Is yellowish, greenish-yellow, or blue, and is found in veins which traverse granite or gneiss, or embedded in granite, and sometimes in alluvial soil formed from granite. Translucent specimens of this lapidary's gem are found in Brazil, of the best aquamarine description. The beryl of Scripture was probably the chrysolite or topaz.

Berzelium, a recently discovered chemical element resulting from thorium dioxide, and possessing immense illuminating power. Dr. C. Baskerville, of North Carolina, was its discoverer, and gave it its name in honour of Berzelius, the Swedish chemist who discovered thorium.

Bessemer Process, a metallurgical process superseding puddling with certain descriptions of cast-iron, and for the manufacture of steely iron for many purposes. First disclosed before the British Association in 1856; the process consists in the forcing of atmospheric air into molten cast-iron.

Betel, the leaf of an Indian climbing plant, of pungent, narcotic properties; much used by the natives of India, who chew it. It is destructive to the teeth, and reddens the gums and lips.

Bethlehem, the birthplace of Jesus and of King David, is now an inland village of white stone houses, about six miles south of Jerusalem. Famous for its Church of the Nativity, built like a cross, and below which is a crypt where the Saviour is said to have been born.

Betting—despite State and organised general effort—is more largely indulged in to-day than at any previous period, and exists among all nations. Numerous prohibitive laws have been passed in England with a view of minimising the evils of the practice; but so long as horse-racing remains a national pastime, betting is not likely to decline, it being in connection with racing events that betting is chiefly carried on. Professionalism, as evidenced in the operations of bookmakers and tipsters, is an element of harm, but such people have no legal status. Betting houses have not had legal existence in England since 1852, and since 1874 advertisements of such houses, whether in or out of the Kingdom, have been illegal. No restrictions are placed, however, on betting on racescourses and at private clubs, so that one way and another betting continues among all classes, and instances are not few of "book-makers"—operating on some sort of system that precludes the possibility of serious loss—having made large fortunes. The first to adopt any special method in betting was William Ogden, in 1793. In France, in order to discourage bookmaking, a mechanical system called the *Parl-Mutuel* is sanctioned, which practically constitutes a lottery. Very large sums are frequently staked in England on the racing of horses, and many "plunging" young noblemen and others have been ruined by the craze. Apart from racing, many odd bets are recorded. A man named Corbet, in the knee-breeches days, laid and won his bet that his leg was the handsomest

in the Kingdom. In George II.'s reign a bet was made that the slums of London could produce an uglier man than Heidegger, the King's Master of the Revels, and an old hag of St. Giles was produced who at first seemed to outdo the German in hideousness of visage, but on a woman's bonnet being placed on Heidegger's head the palm of ugliness was at once awarded to him. Sir Mark Sykes, a Yorkshire baronet, was giving a dinner party at his house in 1809, and, the conversation having turned upon Napoleon and the risks of assassination he ran, Sir Mark offered to pay any one, who would then and there give him 100 guineas, a guinea a day as long as Napoleon lived. A clergyman, named Gilbert, took the bet, paid the money down, and for three years afterwards continued to receive his guinea a day; then the squire repudiated the transaction, and there was a law-suit, the baronet winning on the ground that the bet was illegal. Where the betting propensity exists there is no event too trifling or too ludicrous to form the subject of a wager. A Bill for the Suppression of Betting in Streets and Public Places passed through Committee in the House of Commons in 1906, under which an offender may be arrested without warrant.

Bhang, a hemp plant containing highly narcotic and intoxicating properties. The natives of India chew its leaves and seeds, and the drug called *bhang* is prepared by the natives.

Bible—The Old Testament and the New Testament. The Old Testament—the prehistoric portion—consists of 39 books, and is divided into three parts: (1) the Law, (2) the Prophets, (3) Miscellaneous Writings. The Hebrew text as now printed is called the Massoretic. The apocryphal books, excluded from the Bible used by the Protestants, are accepted by the Roman Catholics. (See *Apocrypha*.) What is called the King's Bible, on which the Coronation oath is taken, excludes the Apocrypha. The books of the New Testament were written in Greek, and are believed to be the work of the Apostles, or contemporaries, but there is no definite knowledge on the subject. The whole of the Bible was translated into Latin (*Vulgate* version) in the 2nd century. Portions were translated into the Anglo-Saxon in the 8th century, and the Venerable Bede put the greater part of St. John's gospel into English, but it was not until 1536 that a complete English version appeared—the Coverdale Translation. The Authorised Version dates from the reign of James I. A Revised Version belongs to recent days (New Testament, 1881; Old Testament, 1885), but it has not entirely displaced the Authorised Version.

Bible Christians, a sect founded in Cornwall in 1815 by Mr. W. O. Bryan, who had been a local preacher in the Wesleyan body. It obtained a large following, chiefly in the south-west counties of England, and was credited in 1851 with 484 places of worship, with a congregational aggregate of 34,612 at evening service. During the 1840s and 1850s the return of Bible Christian communicants placed the total in Great Britain at 35,508. This particular Free Church has now closed its separate existence by amalgamating under one governing body—the United Methodist Church—from the end of 1907 forward with the Methodist New Connection and the United Methodist Free Church.

Bible Society is an association for spreading a knowledge of the Scriptures. The first is believed to have been founded in New England in 1649 and re-incorporated in 1661; whilst in Great Britain the Society for the Propagation of the Gospel dates from 1701, and the Society for the Promotion of Christian Knowledge from three years earlier. A Bible Society was established in 1712 by Baron Hildebrand von Causten, at Halle. Our British and Foreign Bible Society was founded in 1804. The Religious Tract Society has also had a long and useful career; and in 1801 the National Bible Society of Scotland was formed, though it should be said that the Society in England for Promoting Christian Knowledge had been incorporated as far back as 1709. The British and Foreign Bible Society devotes more than one-half of its expenditure to diffusing the

authorised English version of the Bible. It has issued some 300,000,000 copies of the Holy Scriptures (complete and in portions) printed in nearly 400 different languages and dialects.

Bibles with Nicknames. Among the earlier versions of the Bible were many instances of curious nicknames, and for the more scarce of these Bibles, nicknames from their early large price is realised whenever one is offered for sale. The Vinegar Bible in the late Duke of Cambridge's sale derived its appellation from the misprinting of the word "vinegar" for "vineyard." The Breches Bible, also known as the Geneva, was issued in 1560 with a preface by Calvin, it owed its name to the mention of a garment not usually associated, out of Scotland, with women—a garment now known as "aprons," Genesis iii. 7. Mr. Gladstone had a copy of the Bishops' or Treacle Bible in his library at Hawarden. It was printed by Richard Jugge in 1572, and Jeremiah vii. 28, in it runs, "Is there not treacle at Gilead; is there no phusion there?" And this volume has the variorum rendering, Judges ix. 53, of "All to break his head" as "All to break his brayne panne." In another edition the rendering is, "But a certain woman cast a piece of millstone upon Abimelech's head and brake his brayne pan." Lord Haddington has a copy of the "Treacle Bible" in his pew in Tynemouth Church, Newcastle. The Breches Bibles and a copy was sold at Lord Ashburnham's sale, June, 1807. An early issue of the Bug Bible in 1555 gives Psalm xci. 5, as "need to be affracted for any bugges by night," but the issue of 1560 has "afraid" for "affracted." The modern word "terror" was not the first substituted, "fear" appearing in the issue of 1608. In one Bible the word "rosine" was used where "balm" now occurs, with a note "For at Gilead did grow most sovereign balm for wounds." Of Bibles which are rare, that of 1551 is sometimes said to be the scarcest. In 1661, what has been styled the "Wicked Bible" was published, receiving the name from its having the word "not" omitted from the Seventh Commandment. A similar error occurs in a small pearl Bible of 1653, in which St. Paul is represented as asking "Know ye not that the unrighteous shall inherit the Kingdom of God."

Bibliomania, divination by certain references at hazard to pages, lines, or verses of the Bible, and frequently resorted to in olden times.

Bicycle, a two-wheeled machine (successor to the velocipede of three wheels) which about 1880 came into vogue. It then consisted of one high wheel, driven by pedals, and a small connecting wheel behind. In its present form, with two wheels of even circumference, pneumatic tyres, and effective gearing, it is a much more manageable affair, and has obtained a very wide adoption by all classes, young and old, male and female. The motor-bicycle, the latest form of this two-wheeled road machine.

Bilboes, a word derived from Bilbao, in Spain, are long bars of iron, secured by a lock, and used for imprisoning offending sailors on board ship. The bars clasp the feet. The punishment is styled "putting in irons."

Bill, in Natural History, is the horny, lipless, and toothless jaw of a bird, the upper and lower portions being generally equal, except in birds of prey, when the upper is longer. The bill is used for seizing and dividing food, for fighting, nest-building, etc.

Bill of Rights, or Declaration of Rights, was the document setting forth the conditions upon which the British throne was offered to William and Mary in 1688. This was accepted and ultimately became an Act of Parliament.

Billeting is a system of feeding and lodging soldiers and their horses by quartering them on the inhabitants of a town. It is a privilege that can be compelled to be granted.

Bilboes, a game played on a rectangular table with cues and balls. Louis XIV. made it fashionable. The earliest English description of it is in Cotton's "Complex Gamester" (1694). Among the most

famous scorers are Roberts, Bennett, Peall, Taylor, Dawson and Stevenson. (See Pears' "Dictionary of Sports and Pastimes.")

Binnacle, a table or box on which the compass of a ship is placed, and stands in front of the steering apparatus and steersman.

Biograph. (See *Kinematograph*.)

Biology deals with the phenomena of living matter, describing its properties, growth, changes and conditions. Starting with the protoplasm, it traces the operations of life through the various classifications, the metamorphoses undergone in plant and animal life, and their development, distribution, organism, and functions. The study of biology has in recent times been advanced in all directions—by naturalists, zoologists, botanists, physiologists, chemists, and others—and, studied as a whole by Darwin, Huxley, Tyndall, Wallace, and other brilliant scientists, now fills a large space in the scientific work of the time. Darwin's *Origin of Species*, formulating the theory of evolution in plants and animals, greatly broadened the scope of biological inquiry, and led to a better comprehension of the causes of variation. In the same connection, the discoveries of Pasteur and Lister are to be noted, as whatever adds to our understanding of the laws of life is an extension of the science of biology. The investigation of such phenomena as sleeping sickness, under the auspices of a British Government Commission, and the subjection of micro-organisms to the influence of the emanations of radium, in various Continental and American laboratories as well as those of our own country, belong also to the recent activities of biological science.

Birch, a genus of forest trees of the alder order, and only found in northern regions. In Britain the birch grows to goodly proportions, and forms one of the most graceful of our trees, with its drooping branches and egg-shaped leaves. It has a white bark, which is used for tanning, steeping nets, sails, etc. The Red Indians make canoes of it.

Birdlime is an adhesive substance placed on twigs of trees, walls, wire netting, or elsewhere, to trap birds, and is prepared from the middle bark of the holly, mistletoe, or distaff thistle. It is also made from flour admixed with other adhesives.

Bird of Paradise, a bird allied to the crows, found almost exclusively in New Guinea, the males having the most beautiful plumage of long branching feathers.

Birds, or *Aves*, are next to mammals, the highest order of animal life. They are vertebrate, warm-blooded, oviparous, are covered with feathers, and possess wings. In construction they vary greatly, according to their classification and their conditions of life. Birds are of three distinct classifications—*Carinate*, possessing keeled breast-bones and having power of flight; *Alti*, having, rail-like breast-bones, and incapacity of flight; and *Sessure*, a lizard-tailed genus, of which only one species has been known—the extinct *Archæopteryx*.

Biretta, a four-cornered head-covering worn by ecclesiastics of the Roman and English Churches, and varying in colour according to the rank of the wearer. A cardinal's biretta is red, a bishop's purple, a priest's black.

Biscayan Forge, a furnace (sometimes called a Catalan furnace), in which iron is obtained, directly from the ore, in a malleable condition.

Bishop is a Christian ecclesiastic or officer exercising supreme spiritual authority in the diocese or province to which he is appointed. In the Church of England there are at present 37 bishops, all nominated by the Crown. Two of these are archbishops—Canterbury and York. The bishops are as follows:—Archbishop of Canterbury, salary £15,000; Archbishop of York, £10,000; Bishop of London, £10,000; Durham, £7,000; Winchester, £6,500; Ely, £5,500; Bath and Wells, Oxford, and Salisbury, each £5,000; Carlisle, Lincoln, Norwich, Peterborough, and St. David's, £4,500 each; Gloucester, £4,500; Bangor, Chester, Winchester, Exeter, Hereford, Lichfield, Liverpool, Llandaff, Manchester, Ripon, St. Asaph, and Worcester, £4,200 each; Rochester, £4,000; Dur-

mingham, Newcastle, and Southwell, £3,500 each; St. Alban's, £3,200; Bristol, Southwark, Truro, and Wakefield, £3,000 each; and Sodor and Man, £1,500. In 1911 three new bishoprics were established, Sheffield, Chelmsford, and St. Edmundsbury and Ipswich. The salaries of English bishops amounts to over £186,000. The Archbishops of Canterbury and York, and 24 bishops, in order of seniority, sit in the House of Lords. The (Disestablished) Church of Ireland has 2 archbishops, each receiving £2,500, and 11 bishops, and the Episcopal Church in Scotland 7 bishops. There are 90 Colonial bishops.

Bismuth, a brittle, reddish-white metal found in various rocks, and readily fusible. Melts at a temperature of about 560° C. Chloride of bismuth and nitrate of bismuth are its chief compounds.

Bison, a ruminant animal, comprising the European and the American bison. The former is found in Lithuania and the Ural and Caucasus Mts. The American bison is practically extinct in its wild state.

Bittern, a bird of the heron genus, with long, loose plumage on the front and sides of the neck. It is a solitary bird inhabiting marshes, but rare in Britain.

Bitumen, a combustible mineral substance, the term embracing various minerals (so-called) oils and resins, such as naphthalene, petroleum, mineral pitch, asphalt, mineral caoutchouc, etc. Of the bitumen-impregnated resins, the most economically important—*Elaeuterite*—is only found in three places—the Odun lead mines, in Derbyshire; a coal mine at Montrelais, near Angers, in France; and a coal mine near South Bury, in Massachusetts.

Bivalves, a term applied to shell-fish whose shell consists of two valves, lying one on each side of the body, such as mussels, oysters, and cockles.

Blackbird, or *Merle*, a familiar song bird in Britain, Europe generally, and parts of Northern Africa.

Blackcock, the male of a variety of black-feathered grouse, abundant in Britain and Scotland, almost as large as an average domestic fowl. It has touches of white on wing coverts and under the tail.

Black Death, a fierce epidemic or plague, which carried off thousands all over Europe in the 14th century, one-third of the population of England dying from it. This terrible disease has disappeared, happily, as mysteriously as it made its appearance. Its appalling violence may have been in a measure attributable to unsanitary conditions.

Black Hole of Calcutta was the place where a number of English were confined in 1756 by order of Suraj-ul-Dowlah. Into a noisome space, 20 ft. square, 146 persons were driven, and only 23 were found alive the next morning.

Blacking, a composition of powdered boneblack, oil, raw sugar, or molasses, vinegar, and sulphuric acid, greatly refined and improved in recent years, and used as a boot and leather polish.

Black-lead, graphite or plumbago, a mineral found in Norway, Austria, Spain, Canada, the United States, Ceylon, etc.

Black-letter, the Old English or Gothic type first used in printing books.

Blankets of the best and thickest kind are composed wholly of wool, but what are known as "Union" blankets are of cotton warp and wool weft, the cotton being hidden by the process of "teazing" which brings the woollen pile to the surface.

Blast-furnaces were invented by Darby early in the 18th century, and had the effect of bringing coal into general use as a furnace fuel. Wood had been previously used. The hot-blast introduced by Neilson in 1828 was a still further improvement, the temperature of the air being raised to from 600° to 1,100° by passing through heated pipes.

Blasting, a method of loosening or breaking masses of solid matter, accomplished by means of explosives.

Bleaching, the art of whitening textiles. The old method—still continued by some manufacturers—was to bleach by exposure to the sun; but chemical bleaching is now general, a matter of time being utilized for the purpose. Sun-bleached linen has advantages in durability that are not possessed by chemically bleached fabrics.

Blonde (commonly called Black Jack) is a principal

ore of zinc, and is widely distributed. It is a sulphide of zinc.

Blenny, a group of marine fishes with spiny rays. part of the fin running along the back. Several species are found around the British coast.

Blight, a noxious influence exerted upon vegetation by miasma or atmospheric conditions, or by the attacks of parasitic fungi, or injurious insect life.

Blind People. There are about 1,200,000 blind people in the world, the most serious sufferers from this affliction being the natives of our Indian Empire, whose blind number 443,653; Russia in Europe comes next with 247,000; then Egypt with 148,280. In the United Kingdom there are about 35,000 blind persons, over 25,000 of whom belong to England. The proportion of blind people to each million inhabitants is highest in Egypt, 13,132; in Russia it is 1,492; in India 1,408; Bulgaria 1,320; Spain 1,275; the United Kingdom 780. Belgium is lowest with 429 per million. Many organisations exist for the benefit of the blind.

Blind-worm, or Slow-worm, a reptile of the lizard order. Found in most parts of Europe; non-venomous. Its principal food is the slug.

Blockade, an operation for capturing a town or fortress, preventing the besieged from receiving supplies. A naval blockade renders the entrance or egress of the enemy's ships from a port.

Blockhouses form an important feature of guerilla warfare. The houses are of logs or corrugated iron, and covered in with earth to render them fire and bomb proof, and loopholes are made for firing through. Arranged in lines, and surrounded by barbed wire fencing, with a line of troops aiming at trapping the enemy, effective captures are often made.

Block-system, on railways, establishes a method of signalling whereby the distance between two signal boxes can never be occupied on the same line of rails by more than one train at a time.

Blood, the life-giving and sustaining circulating fluid of animals. In animals having a backbone it is red; in the lower animals it is colourless. Blood is either arterial or venous; that is, either contained in the arteries which carry the fluid from the heart to the tissues, or in the veins through which it is returned to the heart to be re-purified. Under the microscope, blood reveals a composition of nearly colourless liquid, and a large number of corpuscles, some red, some white. The red corpuscles distribute the oxygen from the lungs, the purpose of the white corpuscles remains something of a mystery.

Bloodhound, a dog celebrated for its keen scent, and deriving its name from its power of following a trail of blood. Bloodhounds are sometimes used for hunting, and for tracking fugitive criminals.

Bloodstone, a green variety of quartz, spotted with jasper, like blood-drops. A kind of hematite iron-ore used for burnishing is also called bloodstone.

Bloody Assize, the special series of trials presided over by Judge Jeffreys, when over 300 prisoners who had been concerned in the Monmouth Rebellion were sentenced to death under circumstances of atrocious cruelty, and nearly 1,000 others were condemned to be sold as slaves.

Blowpipe, an instrument used for driving a blast of air or gas into a flame to increase its temperature. Used in soldering metals, and in analytical chemistry and mineralogy for ascertaining the nature of a substance under great heat.

Blue-bird, a habitant of North America, deriving its name from its deep blue plumage. It is one of the few song birds of America, and is a familiar object of the woods from the early spring to November.

Blue-books are Acts of Parliament, reports, or papers issued by order of Parliament, and receive the name from their usually being enclosed in blue covers. Blue-books have been issued since 1682.

Blue-breast, a name sometimes given to the blue-throated warbler (*Phylloscopus sibilatrix*), a pretty little native British bird.

Blue-coat School. (See *Christ's Hospital*.)

Blue-gum, a species of Australian tree, yielding eucalyptus oil, an antiseptic medicament of great use in bronchial affections.

Blue Monday, the Monday immediately preceding

Lent. When in the 16th century, many churches were bedecked internally with hangings of blue.

Blue-peter, a flag of blue, with a white square in the centre, used by British seamen as a signal for sailing for recalling boats, etc.

Blue Ribbon, a term in general use to express the highest prize in any form of competition, the Derby being the "blue ribbon" of horse-racing, and so on. The expression is derived from the highest order of English knighthood—the Garter—which has for the chief part of its insignia a garter of blue velvet.

Blue-stocking, a name given to women of literary pretensions. The term was first applied to the members of a London literary club formed in 1750. There was a Bas-bleu Club in Paris.

Blue Vitriol, sulphate of copper, used for dyeing purposes, principally for after-treating certain dyed colours to render them fast.

Blunderbuss, a short, bell-mouthed musket with wide bore, capable of firing many balls at once, and much used in the 17th century.

Boa, a term applied to a family of snakes of large size, some attaining a length of 30 ft. They are not poisonous, but kill their prey by crushing—constriction—hence the name "boa constrictor." They occur both in the Old World and the New.

Boar, or Wild Hog, an animal largely distributed over the forest regions of Europe, Asia, Africa, and South America. It has a longer snout and shorter ears than its descendant the domestic hog, and is provided with tusks. Having to forage for itself, it is a more active and intelligent animal than the pig of the sty, and offers good sport to the hunter.

Board of Trade, a department of the British Government forming a permanent Committee of the Privy Council and presided over by a member of the Cabinet. Its constitution dates from 1786, but the business of the office is wholly controlled by the President. A Committee appointed in 1904 to inquire into the position and duties of the Board of Trade recommended that the President should be on the same footing as a Secretary of State, with the title of Minister of Commerce and a salary of £5,000.

Boat, an open vessel, propelled by oars or sails, or both. The boats of a ship of war are the launch, barge, pinnace, yawl, cutters, jolly boat and pig; of a merchant vessel, the launch, skiff, jolly boat or yawl, stern-boat, quarter-boat, and captain's gig. Every British passenger ship is compelled to carry a launch and proper equipment of life-boats.

Boat-bill, a genus of birds inhabiting the humid parts of South America, and belonging to the sub-family of the True Herons, technically called *Scoropæ*. The popular name comes from the peculiar conformation of the broad bill of the bird, somewhat resembling in shape two pointed spoons brought together, in repose, on their concave sides.

Bobbin, a spool to hold yarn, silk, or thread for spinning or sewing.

Bobberite, a colourless mineral, found in Peruvian guano in the form of six-sided prisms; a tribasic phosphate of magnesia, it is named after Bobierre, who first described it in 1868.

Bode's Law, an astronomical law discovered or confirmed by Bode in 1778, which indicates the relative distances of the planets from the sun. Thus, we write the numbers:—0, 3, 6, 12, 24, 48, 96; each, after the first, doubling the one preceding it. If 4 be added to each of these numbers, they give the numbers 4, 7, 10, 16, 28, 52, 100; these totals being, approximately, the distances at which the principal planets are apart from the sun, the real distances being:

Mercury. Venus. Earth. Mars. Jupiter. Saturn.
3.9 7.2 10 15.2 52.9 95.4

There is only a failure in the 28.

Bodleian Library, connected with the Oxford University, and named after Sir Thomas Bodley, who in 1564 restored and added greatly to its treasures. A copy of every book published in the United Kingdom has, under the Copyright Act, to be sent free to this library.

Boer War lasted from the 11th October, 1899, when the Boers invaded Natal, to the 31st May, 1902, when

the Peace Treaty was signed at Pretoria. At first the operations of the British troops, under General Buller in Natal and Lord Methuen in Cape Colony, were unsuccessful, and disastrous reverses were sustained at Magersfontein, Stormberg, and Colenso. Lord Roberts was then sent out as Commander-in-Chief, with Lord Kitchener as Chief-of-Staff, and from February, 1900, when Kimberley was relieved, the campaign was steadily pursued on victorious lines. Cronjé surrendered a few days later, Ladysmith and Mafeking were relieved, and after that the struggle was mainly of the guerilla order.

Bog, a piece of marshy ground, upon which it is difficult to base a firm foundation. There are many in Ireland, but few remain in England, by reason of the effective drainage systems that now exist.

Bog iron-ore is a kind of brown hematite found largely in the peat bogs of Ireland.

Bog-oak, a kind of oak that is found buried in peat bogs, and is of a deep black colour throughout.

Bohemian Brethren, a religious society of the 15th century (Hussites), who were persecuted and compelled to worship in secret. Prague was their headquarters. The Moravians sprang from them.

Boiler, a vessel of wrought iron or steel in which steam is generated. Generally the cylindrical shape has been adopted; the marine boilers are cheese-shaped, and the locomotive boiler is constructed with the tubular flue, the fire-box being placed at one end.

Boiling-point is the temperature at which the pressure of the vapour is equal to the pressure of the atmosphere. Under increased pressure the b.p. rises and under lesser pressure, as on the top of a mountain, it is lower. As represented on the Centigrade scale, the b.p. of water is 100°; alcohol, 78°; and ether, 35°. On the Fahrenheit scale, the b.p. of distilled water is 212°.

Bola, a red clay containing oxide of iron, much used in adulterating articles of food that are naturally red. There are several varieties: Armenian, Blois, Bohemian, and French, differing in their shades.

Bombs are hollow iron (or other metal) balls, charged with explosive material and fired by clockwork or other mechanism, or alternately by a time fuse.

Bonol, an antiseptic oil combining disinfectant and healing properties.

Books were originally formed, it is supposed, from heath-bark. At first, collected writings were produced in the form of rolls; then in volumes; and, when the art of printing spread, they began to be issued in bindings upon the principle still in vogue. The earlier books were massively bound, with metal clasps and bands, and samples centuries old survive to show the durability of their workmanship. Books are technically described, according to their sizes, as 4to, 8vo, (quarto, octavo), and so on, the names indicating the number of folds in a sheet. Thus, when a book is printed on a sheet folded in half, it is known as *folio* and consists of 4 pages; if doubled up again, it gives a *quarto*; and if *quarto* size is doubled once more it is a *sextio* and consists of 16 pages; and by a further doubling we get *octavo*; while other methods of folding give *duodecimo*, *18mo*, *24mo*, *32mo*, etc.

Book of Common Prayer contains the services of the Church of England, and is in the main the same as that of Edward VI., with modifications introduced at later dates.

Book of the Dead, a book of ancient Egyptian prayers, copies of which have been found in mummy cases.

Boomerang, a weapon used by the Australian aborigines, made of wood, in the form of a parabola, one side flat, the other round. When thrown forward into the air, it whirls round and rebounds behind the point from which it was projected. Used both as a missile of war and for killing game.

Borax, the borate of sodium, found in Peru, California, Tibet, and elsewhere; it acts as a mild alkali upon the alimentary canal, and makes a useful gargle in inflammation of the throat and mouth membranes, and is also a valuable preservative of food.

Bororo, a race of men of an average height of 6 ft. 4 in., inhabiting a region in the south-west of Brazil.

Borough English, an English custom still obtain-

ing in a few ancient places, whereby, in default of a testamentary disposition to the contrary, landed property descends to the youngest son in exclusion of elder brothers.

Botany is the science of the vegetable kingdom, and its broad classifications comprise Structural Botany, Physiological Botany, Systematic Botany and Economic Botany, terms which explain themselves. Plants comprise an axis or main shaft, which bears the branches, leaves, and flowers; the root, which is usually in the ground, is the medium by which the nourishing substance necessary to the plant's life is obtained from the earth. The stem is the leaf-bearing part of the plant; when hard, it is called woody, when soft, herbaceous. Branches are shoots from the stem, and of the same structure; leaves grow from the branches, and are of various forms. A leaf comprises two parts, the stalk and the blade. The flower is a clusterous modification of leaves which becomes the medium of the plant's reproduction. Plants are flowering or non-flowering.

Boulevard, in its original significance, meant the rampart of a fortified city; it is now given to any important thoroughfare planted with trees, especially in Paris.

Bounds Beating, an old custom still occasionally indulged in, and taken part in by the parish clergyman and officials, who on Ascension Day make the round of the parish boundaries with long sticks of willow, with which they beat the ground at the more important boundary points.

Bounty is an extra recompense given as an inducement to the performance of any special service or work, and in particular to soldiers and sailors.

Bow, an instrument for propelling arrows, and in the days when it was a weapon of war, was usually made of yew or ash, and was about 6 feet long with an arrow 3 feet. It was the weapon with which Crecy, Poitiers, and Agincourt were won. The crossbow was Italian and was adopted in France, but did not become popular in Britain. For its use in archery as a diversion, see Pears' "Dictionary of Sports and Pastimes."

Bow Bells is the peal of the London church of St. Mary-le-Bow, Cheapside, within sound of which one must be born to be entitled to be called a "cockney."

Bower-bird an Australian bird which constructs among the branches of trees a bower-like shelter to which it resorts more especially during the breeding season, though not laying its eggs there.

Bowie-knife is a long one-edged knife of great strength, invented by Col. Bowie, and much used in America at one time.

Box, a well-known plant bearing a very hard and fine wood, and common to both Europe and Asia. It is of two varieties—a shrub that grows 8 or 10 feet high, and a dwarf variety used for garden edging that only grows to a height of a few inches. Box is the best medium for wood engraving, and in the North of England is used for knurr (wooden balls) for the game of "knurr and spell."

Boxers, a section of Chinese who in 1866 rose against foreigners and were guilty of many massacres and atrocities, the movement being especially directed against missionaries. A combined European force was sent out against the Boxers in 1900, and not only was the rising suppressed, but large indemnities were demanded and conceded.

Boxing Day is the day succeeding Christmas Day, and gets its name from its custom of giving Christians boxes on that day. It is a Bank Holiday in England.

Boycott, a term used in connection with a person that the general body of people, or a party or society, refuse to have dealings with. Originally used when Captain Boycott was declared apart from recognition by the Irish Land League.

Boy Scouts. (See *Scouts*.)

Boys' Brigade, a movement connected with churches, missions, and Sunday schools for giving military training to boys from 12 to 18. There is a membership of from 50,000 to 60,000 in the United Kingdom, and the total strength throughout the world amounts to nearly 200,000.

Bracelets have been in use as personal ornaments

from the most remote times. They are frequently referred to in the Bible, and were worn by men as well as women in ancient Egypt. In modern times they have attained great beauty and variety of form and setting, and, decked with gems, constitute a rich adornment to a well-shaped wrist.

Brahminism, the chief religion of the Hindus, is an adaptation rather than an adoption of the doctrine set down in the sacred books of *Vedas*, and was built up on the system of caste. In Brahminism there is a supreme God, with a Divine Triad consisting of Brahma, Vishnu, and Siva. There are four castes: the Brahmins, or priests; the Kshatriyas, kings and soldiers; the Vaisyas, who are traders; and the Sudras, or slaves. Many other divisions and subdivisions of caste have been developed from these four, and the preservation of caste is regarded as a Hindu's foremost duty.

Brake, the common English name of a fern of the Fern genus of Polypodiaceæ, of abundant and vigorous annual growth.

Bramble is another name for the blackberry bush, of which there are over 30 species in Britain, and numberless varieties.

Branding for crimes is still common in some countries, and was not entirely abolished in England until 1822.

Brandy, obtained by distilling, is chiefly prepared in France, the Cognac variety being the best.

Brandywine Battle of, fought between the British and the Americans in 1777 resulting in victory for the former.

Brank, a sort of bridle, with gag, which in olden times used to be fastened to the head and mouth of scolds as a punishment, the offender being compelled to parade the streets and stand at the market cross.

Brass is a compound metal containing two-thirds of copper to one-third of zinc, and, while being harder than copper, is more easily worked.

Brass, *Monumental*, an engraved plate of brass let into or affixed to the grave-slabs of more or less important persons, in many ancient churches, and bearing representations of their effigies, armorial coats, etc.

Brazil Nut, the seed of a large myrtle common in Brazil, and grown in clusters of from fifteen to fifty nuts, enclosed in huge woody coverings.

Bread-fruit Tree is a native of the South Sea Islands, and supplies the natives with a wholesome food. The fruit is the size of a melon and contains a white pulpy substance, which is roasted before being eaten. The plant has been successfully acclimatised in the West Indies.

Breakwaters are artificial structures of stone or concrete built across the entrances to harbours to stay the force of the sea and leave the inner portion calm and safe for ships. There are fine breakwaters at Plymouth, Dover, Aberdeen, and other places.

Breeding, in one of its senses, implies the art of improving animals by selection or treatment intended to produce certain special qualities of their progeny. It is an art that has of late years been practised with highly successful results, in the breeding of horses, sheep, cattle, fowls, cage-birds, fish, economic "insects," etc., some of the results reached being very remarkable, almost amounting to the production of new species.

Brevet is a special commission entitling an officer to a rank in the army higher than that which he really holds in his own regiment, without increase of pay.

Breviary (meaning abridgement) is the short service book of the Roman Catholic Church, and in its present form was fixed by Pope Pius V. in 1568.

Brewing is the art of preparing a fermented beverage, chiefly beer and ale, from an infusion of grain. Intoxicating drinks have been brewed in all ages and countries from the most remote times. In Britain, brewers have been among the richest of our citizens, and several prominent members of the body have been ennobled. There are in the United Kingdom nearly 5,000 breweries, over 3,000 of which do not produce 1,000 barrels each a year; while one firm brews over 2,000,000 barrels, and another firm 1,000,000 to 1,500,000 barrels. The

tendency is for amalgamation of the industry into huge joint-stock concerns to the gradual extinction of the small individual brewer. The number of brewers decreased by nearly one-half from 1804-5 to 1867-8. (See *Beer*.)

Bricks are uniformly shaped and sized portions of baked clay used for building. All the ancient nations made bricks, at first only baking them in the sun, and afterwards by means of fire. The Israelites were employed in brick-making during their captivity in Egypt. The Romans used bricks for all ordinary building purposes, and introduced them into England. In these days brick-making is mainly done by machinery, by methods which greatly increase the power of production as well as improve the quality of the bricks. Tiles are also made by machinery.

Bridal, a nuptial feast, properly "bride ale," "ale" being formerly the term indicating a festival of any kind in this country.

Bridewell, a house of correction formed out of the old palace of St. Bride, Blackfriars, by Edward VI. Demolished in 1864. The name is still frequently applied to buildings used for a similar purpose.

Bridge originated in Russia, and derives its name from the Russian "biritch." Lord Brougham is said to have introduced the game into England from France. See Pears' Dictionary of Sports and Pastimes.

Bridges are structures for continuing roads across streams, rivers, ravines, or roads at a lower level, and, until the adoption of the arch by the Romans, were of rude construction. Indeed, until the 18th century the art of bridge-building was but in its infancy; it has only been since road traffic assumed large proportions, by the development of industries and increase of population, that the art has come to be practised on a great scale on scientific lines.

Wood was the first material used for bridge ways; then came stone; while towards the end of the 18th century iron was brought into use; and now steel has largely superseded iron. Among the most famous of ancient bridges is that of St. Angelo at Rome, built by Hadrian, 13 A.D. The first stone bridge across the Thames was completed in 1509, and upon it were a number of timber houses. This Old London Bridge, as it was called, stood until the 18th century. The Bridge of the Malto at Venice dates from 1388. Old Westminster Bridge and old Blackfriars Bridge were built about the middle of the 18th century. Waterloo Bridge was opened in 1815. Suspension Bridges of the modern type were introduced about 1820. Telford's Menai Suspension Bridge, begun in 1819, had a catenary span of 570 feet. The first tubular form of bridge was the Britannia, across the Menai Straits, designed by Robert Stephenson and built by Sir William Fairbairn. The Victoria Bridge across the St. Lawrence, at Montreal, is a tubular structure 700 feet long. Other famous bridges are the Niagara (suspension); the Forth Bridge (cantilever), with two central spans of 1,770 feet and two anchor spans of 680 feet long, including approaches; the London Tower Bridge (suspension), 900 feet from bank to bank, and approaches 1,260 feet on the north and 780 feet on the south sides. The greatest bridge in the world is that which was opened on the 2nd April, 1905, and crosses the Zambezi, being the most important link in the Cape to Cairo railway.

Bridge-water Treatises, a series of eight theological treatises written by eminent divines in accordance with a bequest of the Earl of Bridge-water, who left a sum of £8,000 for this purpose at his death in 1800.

Bridge-water Trust. This famous Trust was formed by the third and last Duke of Bridge-water, famous as being the founder of inland navigation, who amassed part of his great wealth by speculation in the canal which bears his name. He died unmarried in 1803, and bequeathed his property, with a priceless collection of pictures, to his nephew, George Granville, Marquis of Stafford (first Duke of Sutherland), with reversion to his second son, then aged three years. The latter, in 1833, assumed the

arms and name of Egerton, was raised to the peerage as Earl of Ellesmere, and is the grandfather of the present holder of the title. The first came to an end in 1904, an event that was celebrated by Lord Ellesmere with great festivities, at which 600 tenant farmers and heads of departments were entertained at Worsley Hall, near Manchester, the earl's country seat.

Britannia Metal, a silvery-white alloy composed of tin, copper, zinc, antimony and bismuth, and occasionally lead, capable of a high polish, and used for various kinds of metal wares.

British Association for the Advancement of Science, The, was founded in 1831, to stimulate scientific inquiry and promote intercourse between men of science, and holds an annual session of a week's duration, in some provincial town. In 1884 met in Montreal, in 1887 in Toronto, and in 1909 at Winnipeg. It is divided into twelve sections—mathematics and physics, chemistry, geology, zoology, geography, economics and statistics, mechanics, anthropology, physiology, botany, education and agriculture. The President each year is one of the most eminent scientists or public men of the time.

British Museum, opened in London at Montagu House in 1759, was founded by Sir Hans Sloane's collection, which the British Government acquired for £50,000, though worth four times as much. In 1823, the present building in Great Russell Street was started, and completed in 1847, from designs by Sir R. Smirke. The library building was opened in 1857, and its large circular reading room, 140 feet in diameter and 100 feet high, is probably the finest in the world. The library, to which copies of all books published in Great Britain have to be sent free, is a great treasure-house of books, ancient and modern. George III.'s library of 70,000 volumes, valued at £300,000, was added to it by a gift of that monarch's successor in 1823, and many other valuable private collections have been derived in a similar way. The museum portion contains a series of invaluable collections of sculptures, antiquities, bronzes, jewels, geological specimens, rare manuscripts, and books. The Natural History Department is now separately housed at South Kensington. The British Museum is supported by Parliamentary grants, varied in amount, according to the annual requirement. A large new wing, including marble exhibition room, students' print room, and print exhibition room, was opened in May, 1914.

Broadade, a special kind of cloth in which the design or pattern is woven in relief on the surface of the material, and in great vogue in former days, wrought in gold and silver threads.

Brönze is an alloy of copper and tin, sometimes with zinc, iron, or lead added.

Brownies, according to old country superstition, were household fairies who in the night-time performed various domestic duties for the good people who had won their favour.

Buccanniers were pirates and something more. They formed organised fleets in the 17th century and as their depredations were chiefly directed against Spanish shipping, the British Government did not specially interfere with their operations. One commander of buccanniers, Henry Morgan, was knighted, and made Governor of Jamaica. They ceased to be of much effect after England and Spain made peace.

Bucephalus, Alexander the Great's celebrated war-horse, whose memory his owner perpetuated in building a town bearing the animal's name.

Buckingham Palace, erected for George IV. in 1825, was also the London residence of Queen Victoria, and of Edward VII., the latter improving it considerably. The present king, however, has made great extensions to the royal home, which thus becomes for the first time of real palatial importance.

Buddhism is supposed to have originated in India about the 6th century B.C., the founder being a native prince named Siddhartha Gautama. Around this personality many strange and mystic myths gathered, Buddha representing the highest mystic

state of human existence, the supreme of being, beyond which is no recognition of a God. In Buddhism, *Nirvana* is the perfecting of knowledge and the completest attainment, and involves the realisation of developing conditions tending to the highest blessing. There is no caste in Buddhism. Researches of recent years have brought to light much that had been obscure in this doctrine, and in its more modern phases Buddhism has been freed of much of its superstitions, its idolatrous practices, and its Vedic gods, and remains in its purity a philosophical system in which self-conquest and universal charity are leading elements. Buddhism, driven out of India by the Brahmans, is now the religion of the people of China, Japan, Ceylon, Siam, Burma, and Nepal—some 450,000,000 in all.

Buffalo, a species of wild ox, of stronger build than the domestic variety, and still existing in large numbers in the wilds of Africa, but nearly extinct in Western America.

Building Societies, or clubs, have existed in England since the beginning of the 19th century, but it was not until 1834, when the Friendly Societies Act was passed, that building societies began to spread. In 1836 a short Act gave additional privileges. The early building societies were of the terminable order—that is, they were limited to a specified number of members, and ceased to exist when all the members had received the value of their shares. "Permanent" building societies began to take shape about 1840, the members consisting of two classes—investors, and those who obtain advances upon mortgage. This system worked so satisfactorily that new building societies sprang up in all parts of the kingdom, and at the present time there are over 1,700 such societies in the United Kingdom, with the total funds of nearly eighty millions sterling. The failure of the "Liberator" Society in 1895, through gross mismanagement and fraud, shook public confidence in building societies somewhat, but the passing of a stringent Act making it compulsory on all societies to file regular returns of the property held by them proved of good service.

Bullets and Billots. During the Franco-Prussian War, no fewer than 127,000 projectiles were thrown into Mezières for a loss of 400 lives. At Sedan, however, firing was more deadly, for 9,000 combatants perished from the 240,000 projectiles fired. This was a far heavier mortality than that which attended the defending Spaniards at the landing of the American marines at Santiago. There, from a fusillade from machine-guns and rifles alone of 25,000 rounds, only sixty-eight casualties resulted. The workmanship of the Japanese in their war with China was by no means good, but in 1904 against the Russians they showed far deadlier effectuality. British firing in the last Boer War was better than in former wars, but hardly a subject for boasting; but in the great war (1914-15) it has reached a high standard of efficiency, in spite of a terrible wastage of projectiles.

Bundestag, the German Federal Council, consists of fifty-eight members, elected by the different States. Its function is to confirm, amend, or reject the Bills passed by the Reichstag.

Eye Plot, of 1603, sought to force an extension of toleration to Roman Catholics and Puritans from James I., by capturing and detaining His Majesty until he assented, but it failed.

G

Caaba, (see Kaaba).

Cab, the name given to a one-horse four- or two-wheeled public vehicle, came into vogue in the early part of the 19th century. Eight four-wheeled cabs (or cabriolets, as they were called) were licensed in 1833, and as they were run at much lower rates than the hackney-coaches they were destined to supersede, they soon became popular. The hansom cab, the invention of Mr. Joseph A. Hansom, came a few years later. There are to-day

over 16,000 cabs in London alone, despite the increasing competition of motor and other buses, and the large development of electrified trams and underground railway traffic. The recent introduction of the motor-cab, fitted with taximeter, has been a great success, and has led to the adoption of the taximeter system on a large number of ordinary cabs, with minimum 6d. fares.

Cabal, a term derived from the French word *cabale*, is used to designate any small faction of political or private intriguers, and gained prominence and special significance when applied to the unpopular Ministry of Charles II.'s time, whose initials—Clifford, Ashley, Buckingham, Arlington, and Lauderdale—composed the word.

Cabala, a mysterious Hebrew theosophy, which had its rise in the 10th century, and was announced as a special revelation, enabling the Rabbins to explain the hidden meanings of the sacred writings. This was carried to excess, later cabalists pretending to read signs and evidences in letters, forms, and numbers contained in the Scripture.

Cabinet, in England, is the governing political executive body of the State, comprising the chief officers of the executive, with the First Lord of the Treasury (usually the Prime Minister) at its head. The ministers generally recognised as having the prescriptive right to Cabinet rank are, in addition to the Premier, the Lord Chancellor, the Lord President of the Council, the Lord Privy Seal, the Chancellor of the Exchequer, the five Secretaries of State, for the Home, Foreign, Colonial, War, and Indian Departments respectively, and the First Lord of the Admiralty. To these, more—usually comprehending nowadays the Presidents of the leading Committees of the Council, *i.e.*, the Board of Trade, the Local Government Board, the Board of Agriculture and Fisheries, and the Board of Education, as also the Secretary for Scotland, the Chief Secretary for Ireland, the Postmaster General, and the Chancellor of the Duchy of Lancaster—are added at the discretion of the Prime Minister. The Cabinet, as representing one party, dates from William III. The Ministry includes all the members of Government who are also Privy Counsellors.

Cable is the rope or chain that is attached to a ship's anchor. Chain cables are now in general use except for very deep waters. A cable's length is 200 fathoms, 300 yards. Submarine telegraph cables are composed of copper wires.

Cacao is an evergreen tree, from 16 to 40 feet high, growing abundantly in tropical America, the West Indies, Ceylon, etc., yielding a nutritive fruit, from which cocoa and chocolate are manufactured.

Cachalot, a cetacean chiefly inhabiting the Northern seas, called also the sperm whale. The Mexican and South Sea sperm-whales, allied species, are found in warmer waters; all swim in schools.

Cacoe, a hole in the ground where food or travel impediments are stored, a term and practice introduced into America by French emigrants.

Cachet, *Lettre de*, was a private letter of State, signed by the King, much in use in France up to the time of the Revolution, for consigning obnoxious or troublesome people to prison without trial.

Cactus, a prickly plant, as the name implies, of exogenous nature and varied form and size, fleshy and succulent, and often leafless and of very abnormal shape. The "Indian fig" class have sessile flowers, which bloom at night and quickly die.

Cadets, a name given to a younger son of a noble family, and also applied to young men in training for officerships in the army or navy.

Caduceus, the name of the wand of authority borne by Hermes, or Mercury, being a plain rod, the fillets of which are in the form of snakes, surmounted by a couple of wings. A herald's staff of office is sometimes styled a caduceus also.

Caffeine, an alkaloid found in coffee and tea, possesses a bitter flavour, and is highly stimulative.

Calamagrostis, a botanical term used to indicate all the straws which lie above the chalk—that is, the "most recent" strata. Tertiary is an alternative and equivalent term.

Calque, a long narrow boat peculiar to the Bosphorus, and usually propelled by oars (from two to sixteen in number), and sometimes with sail.

Calringform, an hexagonal crystal of yellow-brown hue found on the Calringform peak in Scotland, and much used in jewellery ornamentation. The same kind of crystal exists in Brazil, India, and Cornwall.

Calorium, a widely diffused metal of light yellow colour, burning vividly at red heat. It is not found in a free state, but occurs in combination with most of the native silicates. Calcite, limestone, marble, and chalk are calcium carbonates.

Calo-spar (calcite) is one of the commonest minerals, and occurs in a wide variety of crystalline forms of the hexagonal system. It possesses the property of perfect cleavage, and easily splits up into rhombs.

Calculating Machines of many kinds have been from time to time devised. They are mostly multiplying or dividing machines. The first to attract special notice was that of Babbage, which was intended to calculate even algebraical problems, but it was never completed. Tide-predicting machines, machines for integrating differential equations, machines for adding, logical machines, calculating scales, etc., are all of the same class, but as it is impossible to endow a machine with brains, the services of these apparatus do not carry us very far.

Calendar, a collection of tables showing the days and months of the year, its astronomical recurrence, chronological references, etc. The Julian Calendar, introduced by Julius Caesar, fixed the average length of the year at 365 days. On this arrangement of the year, there was a loss of 11 minutes and 10 seconds per annum. The shortcoming was rectified by the Gregorian Calendar, introduced in Italy in 1582, but not adopted in England before 1752, when 11 days were dropped out of the calendar. The Gregorian year is 365 days, 5 hours, 49 minutes, and 46 seconds.

Calendering, a mechanical process by which textile fabrics are rolled and pressed to a smooth and even surface.

Calends, the first day of the month in the Roman calendar, when interest fell due, and proclamations as to the order of days were made.

Calico is white, unprinted cotton cloth, and received its name from Calicut in India, whence it was originally imported.

Caliph, the name given to the heads of the Moslem faith, and means successor—that is, successor to Mahomet. At first, the title could only be borne by direct descendants of the Prophet, but only four so-called "perfect" caliphs reigned after Mahomet at Medina. Then others of the Prophet's tribe succeeded. There were 13 caliphs at Damascus between 661 and 750, and 37 at Bagdad between that date and 1258, when the Turks overthrew the old dynasty and finally swallowed up the caliphate. The Sultan is now chief caliph.

Callisthenes, the art of exercising the muscles and limbs in order to increase their strength and improve the grace of form and movement.

Calmuks, a fierce, nomadic race inhabiting the wilder parts of Western and Central Asia, and of the Buddhist faith.

Calotype, the name of a class of pictures produced by a process invented by H. Fox Talbot about 1810, and something akin to the daguerrotype, introduced about the same time. Later photographic developments, however, superseded both.

Calumet, a sacred decorated pipe tobacco pipe used as a symbol of peace or war by the Indians of North America, the bowl being composed of soap stone, and the tube, which is long, being decked with feathers. To accept the calumet when offered is to be friendly, to reject it is to proclaim enmity. There is also a distinctive calumet of war used only on a declaration of war between tribes.

Camareilla, a term originally applied to a coteries of Court favourites, who, by their influence, practically directed the policy of Ferdinand of Spain in the second decade of the 16th century. The name has since come into use to denote any similar clique.

Cambrian Group of strata belongs to the Silurian series, and was so named by Professor Sedgwick because of its abundant development in Wales. It is the lowest and oldest strata containing fossil remains, which include zoophytes, molluscs, crinoids, worms, and crustacea.

Camel, a large ruminant quadruped, inhabiting Asia and Africa, where it is largely used as a beast of burden. There are two species—the Arabian camel or dromedary, with only one hump; and the Bactrian, or double-humped camel. They are of great commercial importance, and by their special structure, which admits of their holding reserves of sustenance and water that will last for a considerable period, are admirably adapted for the passage of the barren deserts. A camel carries a burden of 800 or 1,000 pounds without difficulty, and its cost of keep is small.

Cameo, the name given to a precious stone upon which some design has been carved in relief. Cameo cutting is an ancient art, examples in different coloured layers existing which date from 150 years before the Christian era. There is an agate cameo at the Sainte Chapelle, Paris, which measures 13 inches by 11, and depicts the apotheosis of Augustus. Shell cameos are now common. We have also cameo-pottery, of which Wedgwood-ware is an example.

Cameras are instruments by which a convex lens is made to reflect and depict the image of an external object upon a screen. It is constructed in the form of a box, in two compartments, and is, in fact, like the human eye, a camera obscura. Photographic cameras are made in many shapes and sizes, and specialised as landscape cameras, copying cameras, portrait cameras, snapshot cameras, Kodaks, and so forth. (See **Photography**.)

Camisards, a French Protestant party of the early part of the 18th century, originating in the Cevennes, and resorting to arms in support of their faith.

Camlet was the name of a very fine dress fabric, made from silk and camel's hair. In modern days there are many cheaper kinds of camlets, in the construction of which wool and goats' hair play an important part.

Camomile, a low, close, creeping, composite perennial plant, cultivated for its flowers, which are white with a yellow centre. Camomile flowers are of an exceedingly bitter taste, but an infusion of them is valued as a remedy for biliousness, and as a tonic.

Camorra, an Italian secret party largely composed of criminals, and at one time influencing politics considerably by their terrorising action. Naples was the birthplace of the movement, and, although many attempts have been made to suppress the Camorra, they still give trouble from time to time.

Camp, a place where soldiers are or have been encamped. Roman camps were entrenched and rectangular, with fosse and vallum. There were four gates, and the enclosure was laid out in streets, the broadest being 100 feet wide, the others 50 feet wide. Camps are much more elaborate under the modern military system. Among the permanent camps of instruction, those of Aldershot in England and Chalons-sur-Marne in France are best known.

Campaniles, or bell-towers, are usually detached from their parent church, but not always. The most famous are in Italy, and are lofty and elaborate structures. That of Giotto at Florence, in connection with the cathedral of Santa Maria del Fiore, is architecturally the finest in the world. Other famous campaniles of Italy are those of Cambrano (395 feet high) and Pisa (the Leaning Tower). The pointed campanile of St. Mark's, Venice, which fell a few years ago and has been rebuilt, is a much admired example. Campaniles as separate structures are seldom found in Great Britain; the finest is that of the Westminster Roman Catholic Cathedral. The bell-turrets of St. Paul's in London and St. Peter's at Rome are only a form of campanile.

Campus Martius was a large plain used by the ancient Romans as a military camping ground. It was situated between the Quirinal and Capitoline hills, and is to-day entirely built over and forms the heart of modern Rome.

Canary, a wine that from Tudor times to Georgian days was much consumed in this country, and is frequently alluded to in our older literature. It is a product of the Canary Islands, hence its name.

Candle-fish, so called from the fact that the Indians of North America utilise its dried oily body as a candle. It is a small fish abounding on the Pacific Coast.

Candlemas, an English and Roman Church festival in celebration of the Purification of the Virgin and the Presentation of Christ in the Temple, and deriving its name from the great show of candles made on the day (and February) in the Roman celebrations.

Canoe, a kind of light boat employed by many peoples in primitive times, made originally of a hollowed tree trunk, or of bark or skins attached together over a rude framework, and generally propelled by paddles. Large canoes were used by the islanders of the South Seas and elsewhere for war purposes. Canoes of to-day, employed in civilised lands for pleasure purposes, are very light boats, narrow in the beam, and are constructed from strong thin wood, galvanised iron, steel, water-proofed canvas, or other suitable material. Mr McGregor travelled thousands of miles in Eastern waters in his famous canoe, the "Rob Roy."

Canon, a term applied to signify a recognised rule for the guide of conduct in matters legal, ecclesiastical, and artistic, or an authoritative ordinance; thus we have Canonical Scriptures, Canon Law, etc. A Canon is also a dignitary of the Church, usually a member of a cathedral chapter in the Anglican communion, or in the Roman Church a member of an order standing between the regular monks and the secular clergy.

Canonical Hours were seven in number in the Western Church: Nocturns, or Matins and Lauds, before dawn; Prime, dawn morning service; Tierce, 9 a.m.; Sext, noon; Nones, 3 p.m.; Vespers, 4 p.m.; Compline, bed-time.

Canonisation, the entering of a person who has been dead over fifty years on the list of saints of the Roman Catholic Church, after proof of purity and distinction of life has been accepted. This having been done, a day is named for the future keeping of the anniversary of the saint's death, and thenceforward appears in the Church Calendar.

Canoeahou, an elastic, gummy substance extracted from various tropical trees.

Cap, literally any head-covering article of dress. The "Cap of Maintenance" is carried before the Sovereign at the Coronation, and is used symbolically in heraldry.

Capercaillie, a northern moor-bird, inhabiting Scotland and Sweden, and living on fir-shoots.

Capet, the family name of a race of French kings, founded by Hugh Capet in 987. The houses of Valois (1328) and Bourbon (1569) were of the same blood, and Louis XVI. was tried and sentenced under the name of Louis Capet.

Capital Punishment is the carrying out of the sentence of death. In Blackstone's time there were 26 offences punishable with death in England, but to-day murder is practically the only crime that constitutes a capital offence in this country. Capital, in this sense, literally means "affecting the head"—that is, life—of a person, and refers to the now obsolete punishment of decapitation.

Capitol, a term that was first applied to the Temple of Jupiter on the Capitoline Hill, Rome, completed in 507 B.C. It was several times destroyed by fire and rebuilt. The existing Capitol, a large portion of which serves the purpose of a museum, was erected from designs by Michael Angelo. In all the chief cities of the ancient Roman Empire there was a capitol or town-hall. In the United States the building occupied by Congress at Washington bears the name of the Capitol, and the halls of the legislative assemblies of the different States are named.

Capitoline, a zodiacal constellation between Sagittarius and Aquarius, figured out in ancient times as having the head of the goat and the hind part shaped like a fish.

Capstan, an apparatus on ships for raising anchors or other heavy work. It is of upright form and made of wood or iron, and turns on a vertical axis, moved by poles fitted into sockets in the upper part. On steamers the capstan is worked by steam.

Capuchins are members of a mendicant order of Franciscans, founded in the 15th century, and named from the capuch or cowl worn by them. They are still a numerous order, though freed from many restrictions applied to them in earlier times.

Caravan, a band of travellers or traders journeying together for safety across the Eastern deserts. These caravans sometimes form a very numerous party.

Carbohydrates, the name of a group of organic bodies containing carbon atoms allied with hydrogen and oxygen in the proportion in which they form water. Starch, sugar, glucose, cellulose, and gum are of this group.

Carbolic Acid results from the distillation of coal-tar, and is composed of carbon, hydrogen, and oxygen. In its pure state it crystallises and is almost colourless. In odour it resembles creosote. It is a valuable antiseptic, and is poisonous in large doses. Treated with certain acids and alkalis, it is used for various dyes.

Carbon, a chemical non-metallic element found in the diamond, graphite, and in the amorphous form of charcoal, coke, lampblack, soot, etc. Its distribution as an element extends through the whole of the animal and vegetable kingdom, and the number of its components are beyond enumeration.

Carbonari, members of a secret political society originated in Naples during the reign of Murat, and at one time very numerous. Their chief aim was to free Italy from foreign rule, and they exerted considerable influence in the various revolutionary movements in the first half of the 19th century. Their name was adopted from the charcoal burners (*carbonari*), and their passwords, signs, etc., were all in the phraseology of the fraternity.

Carbonic Acid, a gaseous compound consisting of 1 part of carbon and 32 of oxygen, colourless and odourless, and resulting when a substance containing carbon is burnt with a free current of air. Used as the effervescing element in aerated beverages, champagnes, bottled beer, etc. It is largely evolved from fissures in the earth, and is a constituent of the after-damp that so often causes explosions in mines, though not itself inflammable. It is absorbed by and given forth from plants, and also formed and given out during the respiration of animals.

Carbonic Oxide, a colourless inodorous substance formed of 12 parts of carbon and 16 parts of oxygen, and very poisonous. It is produced when any substance largely composed of carbon is consumed with only a small supply of air. No commercial value attaches to it.

Carboniferous System, in geology, is the term used to designate the strata from which coal is obtained. It is in three groups: the coal-measures, the millstone-grit, and the mountain-limestone.

Carbuncle, the name of a deep-red stone of the garnet order, found in the East Indies.

Cardamom, the seeds of various zingiberaceous plants, mainly indigenous to Malabar, aromatic and tonic, and useful medicinally in purgative compounds and carminatives.

Cardinal, a Roman Catholic ecclesiastical dignitary of the highest rank. Cardinals are divided into three classes: cardinal bishops, of which there are only six; cardinal priests, numbering 50; and cardinal deacons, 21-20 in all. They are appointed by the Pope, and associated with him in the government of the church. The dress of a cardinal consists of red cassock, a rochet, a short purple mantle, and a low-crowned red hat decorated with cords and tassels.

Cardinal sins, according to medieval classification, were seven in number: pride, vanity, indolence, avarice, gluttony, envy and anger.

Cardis, as a game dates back to a very early period, and became known in Europe in the 14th century.

A great variety of card-games, including whist, baccarat, nap, euchre, poker, bridge, etc., is played, and wherever gambling has been indulged in on a large scale cards have been the most usual instrument. A duty of 3d. per pack on English playing-cards is imposed, and a maker of such cards has an annual licence of 20s. to pay. See *Pears' Dictionary of Sports and Pastimes*.

Caribes, a tribe of American Indians, now mainly confined to South America and Dominica, but originally from the Caribbean Isles.

Caricature has for its object the exaggeration of the defects or peculiarities of persons or things so as to render them ridiculous. It is an art that was practised by the ancients, but did not attain real power and force until after the invention of printing.

England has from the 18th century forward produced many eminent artists in this line, from Hogarth, Rowlandson, and Gilray in Georgian days, to Sir John Tenniel, Sir F. Carruthers Gould, Max Beerbohm and the cartoonists of *Vanity Fair* of our own time. Among the caricaturists of social things the leading names of modern times in England are those of Cruikshank, Hablot K. Browne, Leech, Richard Doyle, Charles Keene, du Maurier, Phil May, Tom Browne and Raven Hill. *Punch* has been the chief medium of English political and social caricatures since 1841; and Sir F. Carruthers Gould's political caricatures in the *Westminster Gazette*, all from the Liberal point of view, are among the most humorous things of their kind.

Carlists, a Spanish political party espousing the claim of the descendants of Don Carlos, brother of Ferdinand VII., to the throne of Spain. On the death of the latter in 1833, Isabella, his three-year old daughter, was proclaimed Queen, leading to a civil war that was maintained with varying success until finally crushed in 1876.

Carolingians, the second dynasty of the French kings established 752, included the Merovingian rulers, among them Charles Martel and Charlemagne. The latter was also Emperor of the West. Afterwards there were dissensions and divisions, and in 987 the Capet dynasty succeeded.

Carmelites, a body of mendicant friars taking their name from Mount Carmel, where the order was first established in 1196. The Saracens persecuted them, and they made their way to Europe, founding monasteries and convents in various countries, many such institutions still existing, while there are several Carmelite convents in the United States.

Carnival, the great festival which takes place in Roman Catholic countries on the last three days before Lent, when people of all classes give themselves up to the wildest revelry, buffoonery, and masquerading. It is only in the chief cities of Italy, however, that the custom is kept up with anything of the old spirit. At Nice a modernised form of it is given, of which the "battelle flower" is a feature. **Cereals**, a wild plant growing abundantly in the Mediterranean coast and yielding a bean or pod that forms nutritious food for cattle and horses.

Carolinium, a recently discovered chemical element developed from thorium dioxide, and having a high power of luminosity. Discovered by Dr. C. Barkerville, of North Carolina, and named after that State. Sheds an illumination through tubes of copper, brass, iron and glass.

Caroline, an English gold coin of the Stuart period, at first of the value of twenty shillings, and subsequently worth 23 shillings.

Carpi, a well-known fresh-water fish, found in plenty in most European and Asiatic salt waters and sometimes reaching a length of 4 feet. The gold-fish common to our ornamental waters and aquariums are of this family.

Carpets are thick fabrics used for covering floors, and were first made in Eastern countries—Egypt, Persia, India, etc.—finding their way to Europe in the Middle Ages. A carpet factory was established in France in the time of Henry IV., and one was set up at Mortlake, in England, in the reign of James I. It was the custom in early times to use

single carpets for covering beds, couches, tables, etc. The best-known classes of carpets are the Axminster, Kidderminster, Wilton, Venetian, and Turkish. In modern times the production of carpets has been greatly improved and extended by the aid of steam-power and ingenious machinery.

Carronade, a short piece of ordnance of large calibre, with a powder-chamber similar to that of a mortar. It was first made at the Carron Ironworks, Scotland, hence its name. Although now superseded by improved guns, it did excellent service in the Navy from 1779 down to the end of the wars with France.

Carthusians, an order of monks founded in 1086 by St. Bruno at the Grande Chartreuse, near Grenoble, and introduced into England about a century later. They built the Charterhouse (corruption of Chartreuse) in London in 1371. Their habit includes a hair-cloth shirt and cowl. The liqueur *Chartreuse* was invented by the order in their mountain retreat and is still their secret. For many years they have derived large revenues from the sale of the cordial.

Cartoons are properly designs of the actual size of an art work as it is intended to be completed, and made for frescoes, tapestries, or mosaics. The most celebrated cartoons are the seven painted by Raphael, now at the South Kensington Museum. The artist executed 25 in all, but only these seven, which Rubens obtained for Charles I., remain. A political pictorial caricature or symbolic design is also styled a "cartoon" nowadays.

Cartridge, a case of metal paper, or pasteboard, containing the exact charge of gunpowder or other explosive required for a rifle or gun.

Casein, the leading nitrogenous element of milk, which coagulates by the action of rennet, or acids, when it takes the form of curd.

Cashmere, a soft silky fabric, made from the hair of the Cashmere goat, and the object of a considerable industry in India, cashmere shawls being often of great value. There is also a kind of Cashmere largely manufactured in this country from Asiatic wools and cotton.

Cassowary, a large bird of the ostrich family, inhabiting the Molucca Islands, New Guinea, and North Australia. It is of black plumage, with three toes, and has a horny crest upon its head. In fleetness it can outstrip the horse.

Castanets, spoon-shaped shells of hard wood or ivory, attached by cord to the thumb, and stuck together by the middle finger, making a crisp sound. Castanets are of Moorish origin, and used by dancers as time-beating accompaniments.

Caste, a term used to specify the different social classes into which the laws of Brahminism divided the Hindus. The four leading castes are: (1) the Brahmans or priests (of the military caste); (2) the Veisyas or traders; (3) the Sudras or labourers. There are many subdivisions also, the Sudras alone having 36. The Pariahs are considered beneath all classification of caste. Caste is a term adopted in other countries also in regard to class distinction. "The caste of Vere de Vere," sings Tennyson.

Castor-oil Plant is a native of India, but now widely distributed in all hot regions. It grows to a considerable height, has broad palmate leaves, and bears a spiny fruit containing seeds which when bruised yield the well-known oil. The first yield of the oil is obtained by simple pressure. This is castor-oil in its "cold drawn" and purest form. A more copious quantity results from heating, but not so good.

Casultery, in ethics, is a subtle process of reasoning by which nice points of conduct and conscience are settled.

Cat, the general name for all quadrupeds of the *Digitigrade* section of the carnivorous order, from the lion down to the domestic cat. The latter is supposed to be descended from the Wild Cat once so common in Britain and other parts of Europe. Egypt is credited with having been the first country in which the cat was domesticated. The finest varieties are the Angora (or Persian), the Maltese, and the Manx.

Catacombs are subterranean or built-up places of interment. The most famous are those of Rome, constructed by the early Christians, where in times of persecution they concealed themselves. They are of great extent, consisting of a labyrinth of vaulted galleries, 4 to 5 feet wide, at different levels. These Roman catacombs are said to have contained over 6,000,000 bodies and to have extended scores of miles in length, though not more than about six miles are now accessible. Catacombs have also been discovered in Naples, Cairo, Paris, etc. Attached to some modern cemeteries are catacombs of the built-up order, formed of chambers of stone or brick in the walls of churches or mausoleums.

Cakamaram, a float or raft of three or more pieces of wood lashed together. Used mostly on the Coromandel coast.

Catapult, a military engine used in ancient times for throwing missiles of stones, spears, and arrows. They were constructed of wood, and by means of a freed spring ejected the massed missiles with great force into the ranks of an enemy. The ballista (*q.v.*) of the Middle Ages was an adaptation of this.

Catacombs are gigantic waterfalls. The most famous are those of Niagara in North America, the Orinoco in South America, the Victoria Falls on the Zambesi in Africa, the Falls of the Rhine at Schaffhausen, and the Cascade of Gavarni in the Pyrenees. Catacombs, surgically, signifies an affection of the sight.

Catechism, an elementary book of principles in any science or art, but more particularly in religion, in the form of questions and answers. There are a great variety of these, including the Lutheran, prepared by Luther in 1529, Calvin's Geneva (in 1536), and the Anglican, in the Book of Common Prayer.

Catechumen, a term applied in the primitive church to children of Christian parents, who were admitted as neophytes, and occupied a place apart in the church.

Caterpillar, the larva of a lepidopterous insect, worm-like in its segmented body, usually furnished with feet, often curiously marked and coloured, and frequently more or less hairy.

Cathedral, the chief church of a diocese, so-called from its containing a Bishop's seat, or episcopal chair. The finest cathedral in the world is that of St. Peter's at Rome, founded in 150. Other celebrated cathedrals are Notre Dame of Paris, the cathedrals of Cologne and Milan, St. Paul's in London, Canterbury Cathedral, York Minster, and the cathedrals of Durham, Bristol, Gloucester, Peterborough, and Exeter.

Cat's-eye, a kind of quartz, much valued as a gem, opalescent, and of various shades.

Caucus, an American term designating a private authoritative body of politicians whose duty it is to select candidates for office and deal generally with party business. It was first used in this country at Birmingham in connection with what was called the "Liberal Six Hundred." Lord Beaconsfield employed the term satirically. The word has since come into common use, though generally in an uncomplimentary way.

Cavalier, a name adopted during the troubles of the Civil War to designate the Royalist party; it is also used generally in reference to a knightly, gallant, or imperious personage.

Cavalry is the part of an army consisting of troops that serve on horseback, and now much less used than in former times. The cavalry of the Greeks and Romans were generally members of noble families, and down to the Middle Ages something of this distinction was continued. After the invention of gunpowder, this branch of the military service underwent great changes; and in more recent times, with the development of heavy artillery, cavalry has been less prominent than before. Cavalry to-day is divided into two main classes, heavy and light. The British Army has 31 regiments of cavalry, 3 of Household Cavalry, 2 Dragoon Guards, 3 Dragoons, 6 Lancers, and 1 Hussar. The Transvaal War of 1899-1900 showed the special value of mounted infantry, and this line of cavalry service is being developed.

Caves are natural hollow places in the earth, largely

met with in limestone or volcanic rocks. Fingal's Cave in Staffa is noted for its splendid range of basalt columns, and at Malham and Kirkdale in Yorkshire, and Kent's Hole near Torquay, are far-extending caves. The mammoth cave of Kentucky extends through many miles of labyrinthine windings.

Cave-men. From the fossil evidences found in various geological strata of the pre-historic period we find that a race of people existed who were ignorant of metals, pottery, and agriculture, and knew nothing of domestic animals. It is also clear that they lived in caves which served them as refuges against predaceous beasts.

Caviare is a Russian preparation made from the salted roe of certain fish, such as sturgeon, sturlet, and sarragen, and much appreciated by epicures.

Cayenne Pepper is made from the dried and baked pods of various kinds of tropical capicum.

Cedar, a dark-leaved, cone-bearing, horizontal-branched evergreen tree that grows to a considerable height and girth, the best known species in this country being the Lebanon Cedar, which was introduced into England in the 17th century, and is now of frequent occurrence here. Its native regions are the mountains of Western Asia and the West Indies.

Cell Theory, a doctrine that all animal and vegetable tissues consist of cells or of their products.

Celluloid, a compound of gun-cotton, camphor, and other ingredients, producing a substance that closely imitates ivory, or, when coloured, numerous decorative objects, such as coral, amber, tortoiseshell, etc.

Cellulose, a carbo-hydrate, and a constituent of nearly all plants and vegetable structures. By being treated with strong acids and boiled with water, glucose is obtained. Cellulose occurs in an almost pure state in the fibres of linen and cotton.

Celts, an ancient race of Western Europe, originally settled in Gallia, and afterwards spread over other parts of Europe, including Britain. The two chief divisions of Celtic Britons were the Gaels of Ireland and the North of Scotland, and the Cymri of Wales. The descendants of these races still retain many of their ancient characteristics, and considerable interest is manifested in their language and literature.

Cement assumes various forms, glue, sealing-wax, paste, putty, and other adhesives constituting one class, but the main class consists of substances for binding together brick or stone, and comprises mortar, Portland cement, Roman cement, and plaster of Paris, each possessing qualities rendering it specially adaptable to certain purposes.

Censors were Roman magistrates vested with the power of keeping a record of all citizens, and of controlling the manners, morals and duties of the peoples. In more recent times in England censors have been appointed by the Government in connection with publications of the Press or for the stage. Under Charles II. there was a licensor of the Press. The only special censor in England is the Examiner of Plays. By a new regulation issued in January, 1912, the Lord Chamberlain will grant licenses for the performance of stage plays to managers of music-halls within his jurisdiction to such as apply for them, under certain restrictions. In 1913 a censor of cinematograph films was established. In war time a special censor is appointed to check the reports intended for newspapers. In the great war (1914-18) an official censorship of a far-reaching and very strict kind was organised, and gave rise to much resentment because of its frequent block upon the dissemination of news.

Census was the title given in ancient Rome to a register of citizens, with full particulars as to their family, children, slaves, and so forth. The term is now used in regard to the general enumeration of population which takes place in Great Britain and Ireland and the British Colonies every seven years. The first official census in this country was that of 1801. In France and Germany a census is taken every five years.

Centre of Gravity is the point through which the entire weight of a body seems to act by the force of gravity. This centre may be found either by experiment, such as suspending the body to a string, when the true vertical position will be marked, or by the rules of geometry. The centre of gravity of a straight bar is at the middle point, and of a circle it is the geometrical centre.

Ceorl, the name given to an Anglo-Saxon freeman, who was usually in bond-service to a landed proprietor, but could become a "thegn" if he became possessed of 600 acres of land, with a church and a house upon it, but three generations had to elapse before any descendant of his could be ennobled.

Cerium, a scarce metallic element discovered in 1803. It is capable of precipitation to powder, and only exists in combination in the minerals, cerite, allanite, and a few others. Sulfate of cerium, mixed with salts of thorium, are used in the manufacture of gas mantles.

Cestus, the name given to a girdle worn by Greek and Roman women around their waists, and generally decorated. It was also the name of the loaded gauntlet worn by boxers in the Roman arena.

Cetacea, the order of mammals comprising the whale, dolphin, and porpoise, which, though strictly aquatic, breathe air, suckle their young, and are warm-blooded.

Chain Armour was composed of links of hammered iron, and worn over garments by soldiers in the 12th and 13th centuries. These garments were called coats of mail, and were superseded by armour made of metal plates.

Chalcedony, a fine quartz occurring chiefly in Chalcedon, and much used by jewellers for necklaces, bracelets, etc. It is found in various colours, in some of which it takes distinctive names, as onyx, carnelian, agate, and sard.

Chalk, a white soft mineral consisting of carbonate of lime only slightly consolidated. It is made into lime by burning, and becomes whiting when purified. Chalk forms the cretaceous system, and is abundant in the South of England, where it reaches a thickness occasionally of a thousand feet. Chalk fossils reveal mollusca, sponges, and sea urchins. Of the many chalk preparations, black chalk, Spanish white, red chalk, and French chalk may be mentioned, though none of these are pure chalk.

Chalybeate Waters are waters impregnated with iron, or containing iron in solution. Chalybeate springs are numerous in England and other parts of the world, and are valuable in restoring strength after illness and improving the blood.

Chama, a genus of large bivalves of the mollusc family, found in tropic waters, especially amongst coral reefs. *Chama gigas* weighs sometimes as much as 350 lb., and one valve has been employed as the basin of baptismal fonts in various churches.

Chamberlain, an official having the direction of the private apartments of a monarch or nobleman. The Lord Great Chamberlain of England is an hereditary official, and his chief duties are to attend the Sovereign at his coronation, take charge of the ancient palace of Westminster, and see to the furnishing of the Houses of Parliament and Westminster Hall on State occasions. This office is held jointly by the families of Cholmondeley and Willoughby d'Ereshy in alternation. The Lord Chamberlain of the Household is the acting superintendent of the Royal Household, and receives his appointment from the Ministry of the day, and is a member of the Privy Council. Chamberlains are also attached to various city and other corporations.

Chamberlain, a well-known brand of red Burgundy, the product of the vineyards of the Côte d'Or, France. **Chameleons,** a family of lizards of which there are numerous species. The common chameleon is a native of Africa, and is about 12 inches long, including tail. It is remarkable for its power of changing colour to resemble its surroundings when surprised, a power that is due to the presence of pigment-bearing cells beneath the skin. It is slow in movement, and insectivorous.

Chameis, a species of antelope, and a native of

Western Europe and Asia. It is not much larger than a goat, lives in mountainous regions, and possesses wonderful leaping power, so that it is very difficult to capture. Its flesh is much esteemed, and from its skin the beautiful chamois leather is made.

Champagne, the celebrated sparkling wine made from the grapes of the vineyards of the district of France, of which Rheims is the headquarters.

Chancellor was the title of a chief officer of the Roman Empire, but at the present day is used to designate in England the lending dignitary of the law and Parliament, and in Germany the highest officer of the State. In former times the Chancellor of England was the King's most trusted adviser, and exerted immense influence. Before the Reformation he was generally an ecclesiastic. The Lord Chancellor is the Keeper of the Great Seal, a Privy Councillor, and Speaker of the House of Lords. His salary is £10,000 a year, and he receives a pension of half that sum. There is a separate Lord Chancellor for Ireland, but this is a judicial office, with a salary of £8,000 a year. There are various minor chancelleries in connection with the Government, and the universities have their chancellors.

Chantry, a private church or chapel established and endowed for the maintenance of priests to perform daily mass for the souls of certain specified persons. Chantries were numerous in England up to the Reformation, and some few still remain.

Chapel Royal, the church dedicated to the use of the Sovereign and Court, and at present situated in St. James's Palace.

Chapel of Ease, a place of worship for parishioners living at a distance from the parish church.

Charcoal, a term applied to wood that has been subjected to a process of slow smothered combustion, and generally refers to the carbonaceous remains of vegetable, animal, or combustible mineral substances submitted to a similar process. Charcoal has many uses, being employed as fuel for gunpowder making, as a disinfectant, and as a filter. It is practically insoluble except when reduced to a fine powder.

Charity Commissioners, an important body appointed by the Charitable Trusts Act of 1853 for inquiring into, and the management of, charities in general and endowed schools. By the Education Act of 1859, however, the powers of the commissioners have, to a considerable extent, been transferred to the Board of Education.

Charterhouse, a famous school that until a few years ago was in Aldersgate Street, London, but is now removed to Godalming. In connection with the school is an almshouse on the old London site endowed by Thomas Sutton in 1611. Thackeray's Colonel Newcome was an inmate, and Thackeray himself, as well as Addison, Grotius, and other eminent men, were Charterhouse scholars.

Chartism, the political principles of a body of advanced reformers who appeared in England about 1838, and agitated for "six points" of popular reform, viz., manhood suffrage, annual parliaments, vote by ballot, abolition of the property qualification, payment of members, and equal electoral districts. The movement spread through all parts of the country, and assumed revolutionary proportions in 1848, when meetings of a violent character, attended by vast multitudes, were held, and it was deemed necessary to take strong measures of protection in regard to public men and public buildings. The Chartists threatened to resort to "physical force," and large bodies were put under a sort of military drill by night in secret places, and for a brief period the attitude of the Chartists was extremely threatening. Numerous disturbances took place, and many arrests were made, some Chartists being sentenced to death for high treason, but subsequently reprieved and sent into transportation. An Irish barrister, Feargus O'Connor, assumed the leadership of the movement, but committed so many absurdities that he brought undeserved ridicule upon what was in the main a legitimate movement. It attained its height during a period of intense distress amongst

the working classes, and with the improvement of trade and the relief of taxation, it gradually died down, but the main principles for which it contended have since received practical acceptance.

Chasuble, a sleeveless vestment worn by ecclesiastics over the alb during the sacrament of the mass. It is supposed to symbolise the seamless coat of Christ. Its use in English churches was prohibited in 1552, but again permitted after 1559. It gradually fell into disrepute, however, but some fifty years ago was resumed in the High Church services.

Chauvinism is a term applied to any exaggerated devotion to a cause, more particularly to excess of public or military enthusiasm. The word springs from Nicholas Chauvin, whose extravagant devotion to Napoleon I. made him a laughing-stock.

Cheese, an article of food made from the curd of milk, which is separated from the whey and pressed in moulds and gradually dried. There are many varieties of cheese, according to the method of preparation, or the quality of the milk. The finest cheeses are those in which cream is added to the curd. Among the best-known of British cheeses are the Stilton, Cheddar, Cheshire, Gloucester, and Wensleydale; while of foreign cheeses we have Farnese, Dutch, Gorgonzola, Roquefort, and Gruyere. The soft cheeses, such as Camembert, Brie, and cream, only keep for a short time.

Cheetah, the large spotted cat of Africa and Southern Asia, often called the "hunting leopard" because of its employment in the chase. It is long-legged with non-retractile claws, and not unlike some fleet running dogs in general appearance, but its facial prement and voice betray the feline.

Chemistry is the science which analyses and describes the properties and composition of various material substances. It had its rise in alchemy and has gradually developed into a science of vast magnitude and importance, engaging the study of the most eminent scientific minds. According to chemical principles all substances are composed of indivisible atoms. It demonstrates that an elementary substance is made up of groups of allied atoms, while a compound substance consists of atoms of different kinds, chemically united. Most substances belong to definite groups, of atoms called molecules, each molecule being the smallest proportion into which the substance can be divided. Chemistry concerns itself with defining, and explaining the law, causes, and effects of molecular changes.

Chenille, a soft cord material of silk or worsted used in embroidery, lace-making, and sometimes for carpets and wall hangings or curtains.

Cheque, an order on a bank for the payment of money on presentation to the person named in the document, or to the bearer. It does not require endorsement when made out to bearer, but must be endorsed when payable to order. Each cheque requires a penny stamp in this country. A cheque that is crossed (by having the words "& Co." written transversely between parallel lines) can only be paid through a bank. A banker is liable for loss on a forged cheque unless he can prove carelessness on the part of the drawer.

Cherokees, a North American tribe of Indians, once a powerful and warlike nation occupying a large portion of the Allegheny range, but now residing within the Indian Territory under civilised rule of law and very prosperous.

Chess, an ancient game of Eastern origin. See Pears' Dictionary of Sports and Pastimes.

Chestnut, the fruit of the chestnut tree; those of the Spanish Chestnut, *Castanea vesca*, furnish a favourite esculent. The wood of this tree is used in places in carpentry; while the horse-chestnut (*Asclepias hippocastanum*) is employed extensively in brush-mounting, and in cabinet work.

Chiaroscuro, a term used in painting to denote the arrangement of light and shade in a picture. On the proper handling of chiaroscuro depends the fidelity of depiction of objects and distances.

Chicory, a plant largely used for mixing with coffee and not regarded altogether as an adulterant, being credited with certain dietic virtues. In England,

however, where chicory is added, the fact must be stated on the package sold to the public. The dried roots of the plant only are used, being ground into powder before mixing.

Chiltern Hundreds, the name of a district of the Chiltern Hills where offenders used to hide to escape capture. This gave rise to the appointment of a crown official who was called the steward of the Chiltern Hundreds. The duties of this office long since ceased to be of meaning, and, by a pleasant fiction, when a member of the House of Commons cannot resign his seat without disqualification by accepting a place of profit under the Crown, he accepts the stewardship of the Chiltern Hundreds, which is commonly held to constitute such a place, and this is tantamount to resignation.

Chimpanzee, a large anthropoid ape, a native of tropical West Africa, of a dark brown colour, with arms reaching to the knee, large ears, and a general organisation resembling that of man. It possesses considerable intelligence, can walk erect with ease, and when full grown is about four feet high.

Chinchilla, a South American rodent. Grey in colour, and white underneath. It is greatly esteemed for its beautiful fur.

Chinks, a cotton cloth, generally glazed and covered with floral or other designs. It is largely used for furniture coverings.

Chipmunk, a squirrel-like animal of the *Tamias* genus, common in the United States.

Chippendale Furniture was introduced in the reign of George I. by a cabinet-maker named Thomas Chippendale, who migrated to London from Worcestershire, and set up for himself in a small way in St. Martin's Lane, Charming Cross. He was, however, founder of inventing designs for furniture than of actually making it, and in 1752 published a book of patterns, which seems to have been welcomed by the London furniture-makers of the day, for they soon began to model a good deal of their work upon it. Of course, only a small portion of the so-called "genuine old Chippendale" in existence can have come from the shop in St. Martin's Lane.

Chirograph, an indenture drawn in evidence of title to property, landed or otherwise, and prepared (usually on parchment) in a special manner of engraving.

Chiromancy is the old name for palmistry or divination by the hand. It was greatly practised in olden times, and has had a considerable revival in recent years. The evil grew to such a degree a few years ago that several prosecutions were instituted by the police with a view to its suppression.

Chiropody, the treatment of the hands and feet for the cure or prevention of disease, especially applied to the removal of corns, warts, etc.

Chlamys, a loose military cloak or mantle, worn formerly chiefly by horsemen, and permitting the free use of the arms.

Chloral, a colourless mobile compound discovered by Liebig, and obtained from chlorine and alcohol, or chlorine and starch.

Chlorine, a gaseous substance contained in common salt, and obtained by the action of manganese dioxide and hydrochloric acid. It unites easily with many other elements, the compounds resulting being termed chlorides. It is of great importance in bleaching, and is a valuable disinfectant.

Chlorite, a grass-green or darker green group of minerals of micaceous structure, found in the tin-mines of Cornwall.

Chlorodyne, an anodyne remedy containing morphine, chloroform, prussic acid, and extract of Indian hemp, flavoured with sugar and peppermint. It is often administered to children to induce sleep, and, when unskilfully given, sometimes leads to unfortunate results.

Chloroform, a volatile colourless liquid, is prepared for commercial purposes by distilling a mixture of chloride of lime, alcohol and water; but for medical use it is made from chloral, which yields a pure distillation. When the odour is inhaled it produces unconsciousness and insensibility to pain. It owes its discovery to Liebig, and its first application for medical purposes to Sir James Young Simpson.

Chocolate, a paste made from the kernels of the cocoa tree and flavoured with sugar, vanilla or other substance. Chocolate beverage is made by dissolving chocolate in boiling water or milk. It was thus used by the Mexicans, largely, as far back as the time of Montezuma.

Chouans, the name given to a party of Breton Royalists who were bitter opponents of the Republic, and defended their cause bravely, until La Roche put them down in 1796. There were later risings, but Napoleon, by ordering the execution of their leader, Cadoudal, in 1804, crushed the movement.

Chough, a well-known bird of the crow family, with fine black plumage tinged with blue and purple. It is mainly met with in Cornwall and the West of England, the mountains of Wales, and in the Hebrides.

Chrism, the sacred ointment consecrated by a Bishop, and used in the rites of baptism, confirmation, ordination, etc. It is now only employed sacerdotally in Roman Catholic and Greek churches.

Christadelphians, members of a religious sect which holds that immortality can be obtained by believers only. They have peculiar views of the Trinity; reject infant baptism, and have strange theories about the Millennium.

Christianity, the religion proclaimed by Jesus Christ. Its principles are set forth in the New Testament, and its churches abound in all civilised countries. About one-fourth of the inhabitants of the globe acknowledge the Christian faith today.

Christian Science represents the belief that disease, sin and death can be defeated by faith.

Christmas Cards are a modern institution. The first genuine Christmas card was sent in 1844, and it is believed the sender was W. E. Dobson, R.A. He had a friend from whom he received certain courtesies of which he desired to show some special appreciation. The time was Christmas. So, after some thought, he made a sketch symbolising the spirit of the festive season and posted it to his friend. The sketch was done on a piece of Bristol-board about twice the size of the modern letter-card. It depicted a family group toasting absent friends among appropriate surroundings. And from this small beginning the idea, now so largely utilised, and constituting such a vast industry, was developed.

Christmas Rose, a plant of the Ranunculaceae order (*Helleborus niger*), so called from its flowering, under normal conditions, about the close of the year.

Christolyte, a sect of sixth-century Christians, who believed that upon the descent of Jesus into Hades he left there both His human body and soul, and rose again with His Divine nature alone.

Christ's Hospital, or "Blue Coat School," was founded by Edward VI. on the site of an old Greyfriars monastery, and down to a few years ago was one of London's best known scholastic institutions. It was pulled down, however, to make room for extensions of St. Bartholomew's Hospital, and the school is now carried on at Horsham, Emden, Strlingfleet, Coleridge, and Charter Lamb were the last boys.

Chromascope, an instrument demonstrating the three optical effects of colours; viz., the reflection of speculums, the transmission of light through transparency, and the refraction of lenses and prisms.

Chromatics, the science which investigates and explains the properties of the colours of light, and of natural bodies, forming a chief branch of optics.

Chromium, a metal obtained from chrome iron-ore, a mineral compound of chromic, ferric, and ferrous oxides.

Chronea, a wingless dipterous insect found amongst snow and ice in Sweden in winter-time, brownish yellow on the head, and long-legged.

Chronology, the science of computing periods of time by orderly division, and of assigning to events their proper relative dates.

Chrysoteryl, a mineral found in rolled pebbles in Brazil and Ceylon, in fine crystals in the Ural, and in granite in the United States. It is of a yellowish green colour, and when opalescent makes an attractive gem.

Chrysocolla, a silicate of copper, apparently produced by decomposition of copper ore. It is of a blue-green colour, and derives its name from its slight resinous lustre and transparency.

Chuchuses, a race of Chinese brigands ranging through Manchuria and Mongolia, and accused of serious robberies during the Russo-Japanese war.

Church Army, a Church of England Mission, somewhat on the lines of the Salvation Army, founded in 1882 by the Rev. W. Carlile, and doing great good among the submerged masses.

Church of England was organised in 673 by Archbishop Theodore, who settled the number and boundaries of its dioceses, and divided each diocese into parishes. The conversion of England to Christianity was mainly the achievement of St. Augustine, who in 597 founded the see of Canterbury. The church was in communion with Rome from the first, but was not brought strictly within Papal jurisdiction until after the Norman Conquest, although at no time was the domination of Rome complete over the English Church; so that when the Reformation took effect in the 16th century it was not so much the displacing of an old church and its supplanting by a new one which took place as a strengthening of an anti-papal action which had long been existing.

Cid, a famous Spanish hero of the 11th century; Don Rodrigo Diaz, who, before he was twenty, led a Spanish force against the Moors, and drove them out of Spain. He is celebrated in poem, play and romance.

Cider, a fermented liquor made from the juice of apples by crushing the fruit to pulp when ripe. The cider of Devonshire, Somersetshire, Worcestershire, and Herefordshire is the best.

Cinchona, an evergreen tree common in the warmer portions of the American continent, growing at a high altitude, and famous for its bark, which gives us the valuable drug, quinine. It was introduced into India in 1860, and its product occupies an important position in pharmacy.

Cinematograph. (See **Kinematograph**).

Cinnabar, an ore which yields mercury by heating.

Cinnamon, the dried bark of a tree common in the East Indies, and forms a valuable spice.

Cinque Ports were originally important sea-ports on the Southern coast of England, including Hastings, Romney, Hythe, Dover and Sandwich, which were the five original Cinque Ports. Winchester and Rye were added later. These ports were required to furnish a certain number of ships, ready for service, and in return they were granted many privileges. The Lord Warden of the Cinque Ports draws a salary of £3,000 a year. Earl Beauchamp has been Warden since November, 1913.

Cirrus Cloud, a form of cloud of feathery or streak-like semblance, high in the firmament.

Cisterciens, an order of monks, and nuns taking their names from Cîteaux, near Dijon, where their first convent was established in 1082. The monks wear white cassocks, the nuns, white dresses.

Citric Acid is contained in limes and lemons mostly. It is of value in medicine and in the preparation of effervescent beverages.

Citron, the fruit of a tree of the lemon order, with thick rind, much used for candied peel.

Civet, a carnivorous quadruped from which civet perfume is obtained. In Abyssinia the animal is kept in confinement for the sake of this secretion.

Civil List is the record of expenditure in connection with the maintenance of the royal household and the dignity of the Crown. It is fixed in the first session of Parliament after each monarch's accession. The amount fixed on the accession of Queen Victoria was £206,000 a year; for Edward VII. it was raised to £270,000; and further augmented for George V.

Clairvoyance, the alleged power of mental vision, said to enable its possessors while in mesmeric trance to see persons and happenings at a distance.

Clay, a term used to designate certain plastic, earthy compounds composed of hydrated silicates of alumina. China clay, from which porcelain is made, is the purest clay, and is obtained by the natural crumbling of felspar, which is found only in Cornwall in this country, but is well distributed in China,

Japan, and the United States. Other varieties are pipe-clay, fire-clay, potters' clay and brick clay.

Cleopatra's Needle on the Thames Embankment is an Egyptian obelisk of the time of Thmes III., presented to the British Government by Mehmet Ali in 1869, but not brought to this country until 1878. Its weight is 180 tons.

Cliff-Dwellers were aboriginal tribes who in far-back times had their homes in recesses of the rocky cliffs of New Mexico and elsewhere in the South-western regions of what is now the United States.

Climate and Old Age. Statistics show that a greater number of people live to be centenarians in warm climates than in the higher latitudes. The German Empire, with 55,000,000 inhabitants, has (according to the latest attainable statistics, which must be regarded as approximate and as far as possible relative only) 778 centenarians; France, with 40,000,000, has 823; England has only 146, Scotland 46, Sweden 20, Norway 23, Belgium 5, Denmark 2, Spain 40, and Switzerland none. Serbia, with a population of 2,250,000, has 576 people over 200 years old.

Cloaca Maxima, the name of the great underground sewer of Rome, constructed in the reign of Tarquinius Priscus (circa 588 B.C.) and still extant in its chief structural features.

Clock, a horological contrivance differing from a watch in not being adaptable to transit, save in a minor and unimportant way, and usually having a motive spring or weight, and geared train, with a pulsative device to govern the rate at which the mechanism shall move; also commonly having a figured dial and index hands. One of the earliest inventions for time-keeping was the dial, upon which the clepsydra followed. Archimedes knew how to set wheels going by springs and weights, but who first regulated their speed and applied their controlled motion to a pointer traversing a dial has not been ascertained. But about A.D. 1000 a student at Cordova University added the escapement to a pendulum clock in that seat of learning. In 1228, a clock was, it is recorded, placed in the Palace Yard in London, after which date clocks became general.

Clocks of the Crown. The different Royal Palaces contain a number of Crown clocks. A careful inventory is kept of those at Windsor in the Lord Chamberlain's Department. This inventory contains entries of 230 clocks which fill two large volumes. Many of them are works of art of the highest order, and one in particular possesses an interest of quite a romantic historical character. This is the clock that Henry VIII. gave as a present to Anne Boleyn on her wedding day. It rests on a modern gilt bracket in the Chapel retiring room, and is only four inches deep and ten inches high. Formerly it belonged to Horace Walpole, and when his effects were sold at Strawberry Hill, Queen Victoria bought it for £120 5s. The weights are encased in copper gilt and beautifully engraved, "H.A." and true-lovers' knots on one, and "H.A." alone on the other. In the footmen's room at Windsor there is a specimen of an "Act of Parliament Clock"—a kind of clock that grew out of a Tax imposed on watches by Pitt. This tax caused watches to be much less worn, and tavern-keepers adopted a bold mural timepiece for the benefit of their customers. These timepieces were called "Act of Parliament clocks." The horological curiosity at Buckingham Palace is the Negress Head Clock—a French spring-balance production by Lepine, whom Voltaire engaged to establish a watch manufactory near Geneva. In this clock the hour numerals are shown in one of the negress's twinkling eyes and the minutes in the other. It stands two feet five and a half inches high, the head and bust of the negress being in ornate and enriched with magnificent decorative features. Of another clock in Buckingham Palace, made by Alexander Cumming, an Edinburgh man, for George III., it is said that Cumming received £2,000 for it and £300 a year for looking after it.

Clog, a wooden shoe, often strengthened with iron attachment, worn by factory and other workers in

many industrial districts in our own country, and by the peasantry of numerous Continental nations. Clog-dancing is a performance in which the dancer wears wooden footwear to provide a loud accompaniment, and the exercise is one which admits of the attainment of considerable skill.

Cloisonné, a kind of fine pottery with enamelled surface, decorated with elaborate designs, the outlines of which are formed by small bands or fillets of metal. The Byzantines excelled in this class of work, but at the present day Japan and China lead in Cloisonné-ware.

Cloisters are arched covered walks attached to monastic and ecclesiastical buildings, and usually consist of a series of vaulted arcades surrounding a quadrangle. They were mainly intended as places of exercise and relaxation for the monks.

Closure, a device by which debate is cut short in the House of Commons. By a rule of 1887, any member, with the consent of the Speaker, or Chairman, can move that "the question be now put," and if the motion be carried by a specified majority the discussion ceases and the question is voted upon. A similar rule obtains in both the French and American legislative assemblies.

Clouds are collections of visible vapour suspended in the upper atmosphere at a considerable height—two to three miles on an average. When similar vapours gather close to the earth they form what we call *fog*. Clouds are the result of a process of evaporation that is continuous over sea and land. They are usually classed as follows: the *cirrus*, feathery or resembling locks of hair; the *cumulus*, dense, hill-like masses, called summer clouds; the *stratus* or night cloud, which forms in level streaky sheets; the *cirro-stratus*, a collection of small round dappled clouds, usual in hot weather; the *cirro-stratus*; the *cumulo-stratus*; and the *nimbus*, or rain-cloud.

Clover, various plants of the *Trifolium* genus, of which there are about 300 species. The best known kinds are *White Clover*, a common pasture product in nearly all parts of the world; and *Red Clover*, the most widely cultivated of all, much esteemed as fodder for cattle.

Cloves are the dried flower buds of a species of myrtle, grown principally in the East Indies.

Coal is a carbonaceous mineral substance, commonly black and easily breakable, and may be either dull or shiny. It is very inflammable, and has formed for a long period the most important substance for fuel in employment in most civilised lands. It is composed of chemically altered vegetable matter, chiefly the timber of long-extinct lycopodiaceous trees, and is found as a sort of stratified rock in the coal-measures. The best coal for fuel purposes is that belonging to the Carboniferous series of the Palaeozoic system. Anthracite coal has lost nearly all its hydrogenous and volatile matter by pressure, and this and the more highly bituminous coals are greatly employed in manufacturing industries the world over, while those less so are used for household purposes. A ton of best quality (bituminous) coal will yield 10,000 cubic feet of gas and 10 gallons or so of tar, leaving behind a chaldron of coke and 20 gallons of ammoniacal liquor. The total annual coal production of the world now exceeds 1,180,000,000 tons, valued at over £40,000,000, the United States yielding more than Great Britain, and the two great English-speaking nations between them producing two-thirds of the universal coal output. It is calculated that there remain something like 138,000,000,000 tons of coal available in Great Britain and Ireland alone within a depth of 4,000 feet; but this estimate takes no account of the possible discovery of new coalfields. There are about 3,200 coal mines in the United Kingdom, employing over 1,000,000 persons.

Coal Mining by Machinery has been somewhat slow in being adopted in this country. For some years it has been in use in America and on the Continent. Now, however, electric power is being rapidly introduced, and in many collieries performs the work of pumping, hauling, coal-cutting, winding and

lighting. The electric coal-cutter represents one of the greatest of these improvements. Under the old system the undercutting of the seam so that it could be blown down was the hardest and most disagreeable work which the miner had to do. He had to lie on his side to use his pick, and continually inhale coal dust. Besides the work being hard, the system was not economical, as the miner wasted a great deal of coal. The machine-cutter, which is necessarily of powerful construction, is placed at one end of the coal seam. As soon as the current is turned on, the cutter arm—a revolving chain 6 feet long—swings round and cuts its way into the seam, requiring no bed, but travelling along on its own "shoes," forming its bed as it moves, hugging always closely to the seam, going up and down inclines, and steadily moving forward towards the fixed prop, to which is attached a steel rope. The machine is a steel box, weighing 2,400 lb. It is 8 feet long, 38 inches wide and 16 inches high. It is always partly embedded in the coal by its own weight. It requires very little attention. One man, a miner of a mechanical turn, has to look after the electric apparatus; another stands guard with a pick over the revolving chain, shovelling away coal which may fall and tend to clog the wheel. The next operation after the coal is undercut is for holes to be drilled in the face of the seam by electric drills, which are kept down ready for the miner to pick into smaller lumps and fill into trucks.

Coaling Stations are of the utmost importance to maritime nations as points of equipment, repair and refuge. Britain's principal coaling stations include Aden, Hong Kong, Singapore, Sierra Leone, St. Helena, Simonstown (South Africa), Jamaica and Mauritius. Her far-reaching Colonial possessions give to Great Britain a vast advantage over other Powers in this respect.

Coal Tar. (See "Antiline.")

Coast Action, the influence of the sea on the coasts. The erosion of the shores of Britain having occasioned justifiable apprehension, the matter was referred to a Royal Commission in 1906.

Coastguard Service, an organisation formed in smuggling times for the prevention of contraband operations, but now a branch of the naval service and used for purposes of coast defence. There are 4,300 men employed in this service, at an annual cost (including ships) of nearly half a million.

Coat of Arms, in heraldry, is a device containing a family's armorial bearings. In medieval times it was an actual coat upon which such device was embroidered, and knights wore it over their armour.

Cobalt, a steel-grey metal, malleable, and resembling nickel, found in combination with arsenic and sulphur. It is of great value in the arts as a colouring medium, its protoxide yielding a brilliant blue, largely utilised for colouring glass and porcelain, as well as for painting pigments.

Cobra, the hooded snake of India, Ceylon, and Africa, and one of the most venomous of the vipers. It grows to a length of 4 or 5 feet and possesses the power of dilating its neck and head to a hood-like shape when disturbed, and has a bright mark on its neck which gleams like a pair of spectacles.

Coca, a South American shrub, which yields three crops a year of leaves and flowers. The leaves are chewed by the natives and act as a strong stimulant, enabling them to withstand hunger and fatigue to an astonishing degree. It is used in medicine as a tonic, and yields the alkaloid cocaine. Over 50,000,000 pounds of coca leaves are gathered yearly, and the bulk of this yield is consumed in South America.

Cochineal, a dye-stuff consisting of the dried bodies of the females of a remarkable class of insects of the *Coccus* genus. These insects, which exist in countless myriads in tropical America, Java, etc., feed on a special cacti which is cultivated for them, and are gathered twice a year. The colouring principle contained in the insects is carminic acid, and is a brilliant crimson. It takes 70,000 insects to make a pound of the dye-stuff.

Cochliodus, a fossil genus of fish of the shark order, found in the Carboniferous Limestone of Bristol and

elsewhere. They possessed lateral teeth, marked with sub-spiral ridges and grooved after the manner of the shell of a univalve.

Coclain, a chemical term signifying an admixture of glycerides of myristic and lauric acids.

Cock-a-Bandy, a contrivance for twisting ropes, consisting of a hollow piece of wood through which a pin runs. By reason of the rotation of this pin when the cock-a-bandy is held in the hand, twist is imparted to the rope.

Cockades came into general use when the House of Hanover succeeded to the British throne. It was said that the black cockade and the Hanoverian rat arrived in England about the same time and under similar circumstances. Both were followers of King George I., and both became thoroughly unpopular. The Jacobites disliked the colour of the Hanoverian cockade, the white being the badge of Prince Charlie and his father. In later times the cockade has become a badge of servitude. At one time it was only allowed to be worn by soldiers, but nowadays every British subject has cockade rights if he cares to exercise them. Its use is now mainly confined to the servants of the wealthy.

Cockatoo, a common name for the small cockatoos of the Calopsitta genus.

Cockatoo, a white-plumaged bird of the parrot family with a movable crest, usually of some shade of yellow. Cockatoos are inhabitants chiefly of Australia and the Malay Archipelago, and much in favour as pets.

Cockatrice, a basilisk or fabulous serpent supposed by an exploded tradition to have been hatched from a supposititious egg of a cockatrice by a serpent. Its glance or breath was, according to legend, fatal.

Cockle, the popular name of the shell-fish of the genus *Cardium*, found plentifully in sandy bays near low-water line; there are numerous British species.

Cockroach, commonly called the black-beetle, is a genus of insects that is distributed over many countries, though a native of Asia. It is of nocturnal habits, infests kitchens, pantries, etc., and is often difficult to get rid of.

Cocoa. (See **Cacao**.)

Cocoa-nut Palms are tropical trees which grow to the height of from 50 to 100 feet, and have their tops surmounted by feather-like curving leaves. The fruit of this tree is the ordinary cocoa-nut, and grows in bunches of from 12 to 20. The fibre of the husk is used for a variety of purposes, such as making drinking cups, spoons, brushes, matting and cordage. The trunk of the tree is utilised in the manufacture of various fancy articles.

Cod are well-known food-fish, found in abundance upon the British coasts and upon the banks lying off Newfoundland, their capture and preparation for market, and the extraction of the oil they yield, forming important industries.

Codes, a term used to designate a system of laws properly classified. Some of the codes are of very ancient date. Codes were made by the Gothic tribes as well as by the Romans, who formulated several codes of historic importance, including the Theodosian code, summarising the Roman laws from the time of Constantine to 438; the Papian code, devised for the Roman subjects of the Burgundians, 527-533; the Justinian code, 527-565 (the most important of the Roman codes), and the Gregorian code, another collection of Roman laws. The most important of modern codes is the Code Napoleon, compiled between 1804 and 1810, which still is in force. Frederick the Great made a code of laws for Prussia in 1751.

Codex, a name referring to the manuscripts of scripture, and comprising the Sinitic codex of the 4th century, the Vatican codex of the same period, the Alexandrian codex of the 5th century, and others.

Coffee, a shrub found originally in Arabia and Abyssinia, but now extensively grown in Ceylon, the West Indies, Brazil and Central America. It yields a seed or berry which, after undergoing the necessary preparation, is ground and largely used in most countries as a popular breakfast beverage. The best coffee is the Mocha, an Arabian variety.

Coffee is a stimulant of great value, but its consumption in this country has considerably fallen off of late years. The beverage was first introduced into Europe in the 16th century, and the first London coffee shop was opened in 1632.

Cognac. (See **Brandy**.)

Coherion is the state of cohering or uniting the particles of a homogeneous body. Its power is determined by the force required to separate its parts. This power is strongest in solid bodies, and weakest in elastic fluids, such as air and gases.

Coal is a substance formed from coal by heating it without access of air, and comprises about 90 per cent. of carbon. Its value is that it burns without emitting smoke or flame, thus it is largely used for smelting and heating purposes where the presence of smoke would be objectionable or injurious.

Cola-nut, the name of a seed obtained from the cola tree of tropical Africa, Brazil, and the West Indies. It has strong stimulative qualities, and contains two or three times as much caffeine as coffee.

Colonel, the title of a military officer, and ranking next above a lieutenant-colonel.

Colony is a settlement of people who have migrated from their native land to some possession of the mother country. The Phenicians were the first colonists we read of, and established themselves in various parts of the countries bordering on the Mediterranean. The Greeks were also considerable colonists, and later the Romans. Britain being at one time a colony of the Roman Empire. Colonisation, in its more modern significance, was the result of important geographical discoveries made in the Western world in the 14th century and later by the Spaniards, Portuguese, Dutch and French. From about the beginning of the 17th century England developed a colonising spirit which soon extended the boundaries of the Empire. Newfoundland, Virginia, India, the West Indies were gradually brought under British subjection, and large bodies of English pioneers and settlers proceeded to, and opened up, these various countries to cultivation and commerce. Australia, New Zealand, and South Africa were added to our colonial possessions, and even when the 13 colonies of America were lost to England, her possessions remained and continue to this day of immensely greater extent than the colonial possessions of any other country. The latest colonies to be incorporated with the Empire were those of the Transvaal and Orange Rivers. It is estimated that one-sixth of the land of the globe is comprised within the British Empire.

Colosseum, the name of the Flavian amphitheatre at Rome, begun by Vespasian and finished by Titus A.D. 80. In general outline it still remains one of the most magnificent ruins in the world. It is 607 feet long, 512 feet broad, and 150 feet high. On the ground storey there are 80 vaulted openings. In the arena of this great building the famous gladiatorial displays and mimic naval battles used to be given, and 50,000 spectators could be accommodated.

Colossus is the name which the ancients gave to any statue of gigantic size. The Colossus at Rhodes, which was a bronze statue of Apollo, was the most famous, and reckoned among the seven wonders of the world. It was 70 cubits high, and stood astride of the mouth of the harbour, so that ships could sail between its legs. It was destroyed by an earthquake in 224 B.C.

Colour-Blindness is a defect of vision inducing blindness to certain shades of colour. It is stated that this defect shows itself in from two to six per cent. of males, while under one per cent. of women suffer from it. This colour-blindness is sometimes total, but in the majority of cases only partial.

Column, in architecture, is an upright solid body serving as a support or decoration to a building. Columns consist of a pedestal, a shaft, and a capital, over which the supported entablature rises. They are named according to the styles of architecture of which they form part, being Doric, Tuscan, Ionic, Corinthian, or Composite as the case may be.

Colza Oil is obtained from crushed rape-seed, and is valuable both as a lubricant and an illuminant.

Combustion, the process of burning, arises from the rapid oxidation resulting from the combination of oxygen with any inflammable material.

Comets are celestial bodies which move about the solar system in elliptical parabolic orbits. Usually these star-like bodies are accompanied by a long stream or tail of light. The parabolic comets are seen once only, and do not reappear; the elliptical comets are periodic, and their recurrence can be calculated with accuracy. Comets are of enormous magnitude, sometimes covering millions of leagues, but their light is feeble in comparison with that of a star. The great comet years, so far as recorded, have been 1456, 1680, 1811, 1843, 1858 (Donati's), 1861, 1874 and 1881.

Comitia were gatherings of the Roman people for the purpose of voting on public affairs. The *comitia curiata* was composed of representatives of the patrician families and dealt with State affairs, religion, etc.; the *comitia centuriata* consisted of five classes, and voted on laws, capital crimes, and imperial affairs; and the *comitia tributa*, which was a plebeian assembly, concerned with local matters, magisterial appointments, etc.

Comitium, the place of assembly of the Roman citizens; it stood adjacent to the Forum, of which it was sometimes reckoned a part.

Commander, a naval officer next in rank below a captain. His title is that of sole commander of a vessel of the third or fourth class, or of second in command of a first- or second-class ship.

Commander-in-Chief was the title of the highest officer in the British Army until 1924, when in its place the office of Inspector-General of the Forces was created, to which position the Duke of Connaught was appointed, being succeeded in 1907 by Gen. Sir J. D. F. French, who resigned in 1914, and was followed by Gen. Sir C. W. H. Douglas.

Commodore, a naval officer next below a rear-admiral and next above a captain. It is a title usually conferred upon a captain appointed to a particular service, and is only temporary.

Common Law, in England, is the unwritten law established by custom, usage and precedent, and not by statute. Both statute law and equity over-rule common law when courts are called upon to decide between them.

Common Prayer, Book of. (See Book of Common Prayer.)

Commons are unenclosed tracts of land dedicated to the use in common of all the inhabitants of the district or township in which they lie. In old times almost every parish had its commons, but under the altered conditions of modern existence, commons became less and less of a necessity, and many have been enclosed and built upon, the rights of the commoners being compensated under provisions laid down by Act of Parliament. A Commons and Footpath Preservation Society was formed in 1865.

Commonwealth, the theory that every communal district should have an autonomous government.

Commune is a municipal administration division in France, Italy or Belgium, generally presided over by a mayor and municipal council.

Commune of Paris was originally the Paris Revolutionary Committee, established in 1793, but superseded by the Convention of 1794. The second Paris Commune was that of 1871, which took possession of Paris after the withdrawal of the German soldiers, and destroyed the Tuilleries, the Vendôme Column, the Hôtel de Ville and other public buildings, but was ultimately suppressed by the National troops.

Communism, the system which claims to put an end to private ownership and establish the absorption of all proprietary rights by the State for the common good. It also claims the right of the State to control production, distribution, and consumption, and an equitable division of labour.

Compass (or Mariner's Compass) is an instrument by which the magnetic meridian is indicated, and comprises a horizontal bowl containing alcohol and water, a card upon which the 32 points of the compass are marked, and the steel needle which

always points to the meridian. The origin of the Mariner's Compass is unknown, but it is supposed to have come from China.

Compurgation was a system of trial which prevailed up to the reign of Elizabeth, whereby an accused person could claim the right to summon twelve personal friends to testify their belief in his innocence. From this system grew trial by jury.

Conchology, the science of shells, which was usually divided into three classes—univalves, bivalves, and multivalves.

Conclave, an assembly of Roman Catholic Cardinals met together to elect a Pope.

Concomitance, a doctrine teaching that Christ's body exists entire under each eucharistic element.

Concordance, a supplement of references, notes, and explanations added to any important work such as the Bible, Shakespeare's plays, etc.

Concordat, an agreement or convention between the Pope and a secular government regarding ecclesiastical matters. The Concordat of Worms in 1122 between Calixtus II. and the Emperor Henry V. was famous as deciding a long struggle in regard to investiture. In 1801, Napoleon concluded a concordat with Pius VII., defining the restored relations between the head of the Church and the French Roman Catholics.

Concrete is a substance formed by uniting in coagulated masses various hard materials such as stone chippings and particles, sand, gravel and lime. It is much used for floors, foundations, sea-walls, etc. In recent years reinforced concrete—i.e., concrete combined with steel—has come greatly into use, and performs a powerful part in large constructional work.

Condor, a large vulture of brilliant black plumage, and having a circle of white feathers round its neck. It is a native of the Andes.

Condottieri were mercenary soldiers engaged in the wars of the Italian States in the Middle Ages.

Confer-Bel, a marine eel sometimes found on the length of 10 feet and weighing 100 lbs. It is common round the British coast.

Congregationalists, or Independents, are the oldest sect of Nonconformists and hold that each church should be independent of external ecclesiastical authority. They sprang from the Brownists, who arose in Elizabeth's days, but were compelled to take refuge in Holland. Under Cromwell they were able to extend their ministrations and became a powerful body. Charles II.'s Act of Uniformity drove them forth again, but they regained full liberty of worship under William III. In the British Isles there are over 3,000 Congregationalist ministers, over 5,000 churches, and nearly half a million communicants, while the number of communicants throughout the world is over 1,250,000.

Congress, the legislative assembly of the United States, which first met on March 4, 1793. It consists of a Senate and a House of Representatives.

Conic Sections form an interesting division of the science of geometry, and have to do with such curved lines as can be produced by the intersections of a plane with a right circular cone. Five different sections can be found; the triangle, the parabola, the hyperbola, the circle, and the ellipse.

Conifers are cone-bearing trees, including fir, pine, cedars, cypresses, junipers, yews, etc., and are widely distributed. They are important timber trees, and many of them yield resins and juices of considerable commercial value.

Conjunction, in astronomy, means the meeting of two or more heavenly bodies in the same longitude.

Conscience Money is money paid to the revenue by persons who have previously omitted payment.

Conscription, a system of compulsory military service by lot or enrolment, introduced in France in 1798, but now generally superseded. France, Germany, Austria, Russia, and some other countries have adopted a general compulsory service, rendering all able-bodied males liable to a term of soldiering. A National Service movement for a modified form of conscription for this country has been much discussed of late, and has for its leader the veteran war-captain Lord Roberts.

Conservative is the political Party name adopted by the Tories about the time of the passing of the first Reform Bill (1832).

Consistory, a term applied to the private Council of state under the Roman Empire, but in later times used to designate the higher ecclesiastical courts and senates of the Anglican and Roman churches.

Constable, an officer of high rank in mediæval times, and still, in some few offices, such as the Lord High Constables of England and Scotland, representing considerable dignity. Before the introduction of the police system in England every hundred and parish had its constables upon whom devolved the duty of keeping the peace. The official designation of a policeman is police constable.

Constellation is the term applied to a group of fixed stars. According to Ptolemy, there were 48 constellations. Others were discovered and added from time to time, and now there are 85 constellations, which have been chiefly named from the classical mythology.

Constitution implies the organisation of the great body politic of the nation with regard to legislative, judicial, and executive authority and power. The legislative power is vested in the King, the Lords spiritual and temporal, and the House of Commons. The judicial authority rests with the judges and magistrates, not removable after appointment except for very serious fault; the jury system, which is a very important part of the British constitution, affording a guarantee that no accused person can be dealt with as guilty until twelve of his peers have convicted him. The executive power is nominally in the hands of the Sovereign, but is really exercised by the responsible ministers, who owe their positions mainly to the popular preference, in this country.

Consubstantiation is the belief that the body and blood of Christ become part of the bread and wine partaken of at Holy Communion.

Consul, the title borne by the two chief magistrates of the Roman Republic. Three consuls were appointed for France after the dissolution of the Directory in 1799, Napoleon becoming First Consul and holding the office until 1804, when he was made Emperor. At the present day diplomatic and commercial representatives abroad of the British, American, and other governments are styled consuls.

Contraband Goods are such as are prohibited to be imported or exported, especially such as are not allowed to be sold to belligerents in time of war.

Convention is an assembly of representative persons delegated to decide important questions.

Convocation is an assembly of ecclesiastics for dealing with church affairs. There are only two in England, those of Canterbury and York under the headship of their respective archbishops.

Cobblers are Asiatic labourers employed in large numbers in tropical climates for the tropical lands for plantation and menial work of all kinds.

Copper, one of the most familiar of metals, used in ancient times as an alloy with tin in producing bronze, and preceding iron as an industrial material. Copper ores are most abundant in North America. Spain, Chili, Australia, and Prussia, also yield large quantities. The chief copper-mining region of England is Cornwall, and Swansea has attained great celebrity as a copper-smelting district. All copper compounds are poisonous. Copper sulphate is largely used in calico-printing and in the production of blue and green pigments. The yearly quantity of copper raised throughout the world is some 700,000 metric tons, over 78,000 tons being from the British Empire, mainly Australia and Canada. The consumption of copper for ammunition purposes in the great war (1914-15) was so vast as to deplete all the usual sources of production, and led to much contraband traffic between neutral and belligerent countries, the extra supply from America being very large.

Coppos, sulphate of iron, or green vitriol, employed in the production of sulphuric acid and in the manufacture of ink and black dyes.

Copts, descendants of the ancient Egyptians, professing a modified Christianity, the head of their

system being a Patriarch. They do not marry out of their own race.

Corall, a hard calcareous substance secreted by certain zoophytes for their habitation and support, varying in colour and texture, some being red or pink and some white, some compact and smooth, and some rough and porous. The structure of the coral secretions assumes a variety of forms, fan-like, tree-like, in mushroom shape, and so forth. Red coral is mainly obtained from the Mediterranean. The coral reefs of the Pacific and Indian Oceans and the Red Sea are often many miles in extent.

Cordite, a smokeless powder adopted for small arms and heavy artillery by the British Government in the naval and military services in 1889, and composed of 58 parts of nitro-glycerine, 37 of gun-cotton, and 5 of vasoline. Superseded by an improved explosive in 1902.

Corduroy, a strong cotton fustian, ribbed and made with a pile, so cut as to leave a surface ridged in the direction of the warp.

Cork, the bark of a species of oak grown largely in the South of Europe and North Africa. The cork tree is said to yield bark every six to ten years for 350 years, and grows to a height of from 30 to 40 feet. Its lightness and elasticity enable it to be used for a variety of commercial purposes, especially for stoppers of bottles.

Cormorant, a large swimming and diving bird, of which there are over 20 species. It lives mostly on fish and is famed for its voracity. It is found in Europe, Asia, and America.

Corn, a term used to designate such cereal products as are used as food, but more especially applied to wheat in this country, to oats in Scotland, and to maize in America.

Cornell University, at Ithaca, New York State, was founded by Ezra Cornell, and affords education to 3,000 male and female students.

Corn Laws were statutes intended for the benefit of British Agriculture, and were for the most part prohibitive of exportation and imposed a duty on imported corn. From 1436 to towards the middle of the 19th century such laws were in force, and were often of a very stringent nature. These laws became so oppressive and caused corn to reach so high a price that the poorer classes were plunged into distress. A powerful anti-corn law agitation was organised, of which Cobden, Bright, and Villiers were the leaders, and Sir Robert Peel, in 1846, passed an Act lowering the corn duty to 1s. per quarter. This gave quick relief, turned England into a Free Trade country, and led to a period of prosperity which has in the main been continued ever since. The corn duty was ultimately abolished entirely.

Coronation Expenditure. King Edward VII.'s coronation established a record for modern times, costing the sum of £339,000. The coronation of George IV. cost £238,231, and that of William IV. only £20,000, it being announced that "it was the hope of the King and the Ministers to prevent a heavy burden from falling on the people." In connection with George IV.'s crowning an elaborate record was intended to be published, but it proved too expensive an undertaking to complete. The part which did appear contained seventy-three coloured drawings, "finished like enamels, on velvet and white satin," each portrait costing 50 guineas.

Coroner, an officer whose duty it is to hold inquests on the bodies of people who are suspected of having died from other than natural causes. He is usually either a lawyer or a doctor; an inquest takes the form of a legal inquiry, a court being constituted, with a jury, the coroner being the presiding officer. There are in some places fire-inquests also.

Corporation, a body of persons, authorised by law or Crown grant, to carry out certain specific duties, and to hold property or accept responsibilities as if but one person. Corporations, which have been known from very early times, are either sole or aggregate; that is, consist of only one person, or two or more persons. A bishop and his successors may form a sole corporation, a mayor

and aldermen an aggregate corporation. Every city and town of importance in England is governed by a municipal corporation, consisting of a mayor, aldermen and councillors. A mayor is elected for one year, an alderman usually for six years, and a councillor for three.

Corpus Christi Festival is one of the great celebrations of the Roman Catholic Church, and takes place on the Thursday after Trinity. It was instituted by Pope Urban IV. in 1264.

Cortes, the name of the Parliamentary assemblies of Spain and Portugal.

Costly Treasures. Mr. Pierpont Morgan was the possessor of some of the costliest things in the world. He bought the late Lord Anglessey's rock-crystal ewer which fetched 4,000 guineas at auction in London. Among Mr. Morgan's other treasures were the Raphael Madonna of St. Anthony of Padua, for which he paid £100,000; four tapestries after Boucher, which cost him two million francs; ten decorative panels painted by Fragonard for Madame Dubarry, valued at over £100,000; and Gauborough's Stolen Duchess, for which he gave £30,000. He bought the Pfungst collection of antique bronzes for £15,000; and the great collection of Rembrandt etchings for a similar sum; he owned the famous old silver gathered together by Herr Gutmann; and paid something like £50,000 for the Mannheim collection. His library included such rare treasures as the "Evangelia Quatuor," bought for £10,000; a 5,000 guinea copy of the "Palaeorum Codex," the manuscript of Book I. of "Paradise Lost," the reserve price of which was £5,000; and a large number of Caxtons, four of which are valued at £5,000. (See *Morgan, Pierpont*, in *Prominent People Series*.)

Cotton, the name of a plant of several species, bearing large yellow flowers with purple centres. These centres expand into pods, which at maturity burst and yield the white fibrous substance known as cotton. Cotton grows most abundantly in the United States, but is also cultivated with success in the West Indies, India, Brazil, and the Levant.

Cotton Industry of Great Britain maintains at least three millions of people. The capital invested in it is not less than £400,000,000, and it pays every year something like 40,000,000 for the raw material, by far the greater part of which comes from foreign countries. That raw cotton is manufactured into yarn and fabrics valued roundly at £100,000,000, and little more than a fifth of the product is consumed in the home market. Eighty per cent. of the total production of the Lancashire spindles and looms goes to foreign countries in spite of tariff walls, into neutral markets, and into our own possessions. It is estimated that there are about 140,000,000 spindles for the spinning of the world's cotton; and of these this country has over 55,000,000.

Cotton Seed Oil is an oil extracted from the seed of the cotton plant, and is of considerable commercial value, being often used as a substitute for olive oil.

Count, a foreign title of nobility corresponding in a sense to that of an English earl, but of much inferior status socially in reality. The wife of an English earl is called countess.

County, signified originally the territory of a count or earl; now it comprises a shire or one of the administrative areas into which the kingdom is divided. England and Wales have 32 counties, Scotland 33, and Ireland 32. Some cities and towns are also counties in themselves, so constituted by charter.

County Councils were established by the Local Government Act, 1888. They are popularly elected bodies, invested with administrative powers of great scope, including the making and keeping in repair of roads and bridges, considerable educational authority, the control of reformatory and industrial schools and lunatic asylums, the appointment of coroners, the licensing of music halls, and many other duties. County Councillors are elected for three years, and county Aldermen for six. A chairman is elected by the whole body, and may be chosen from the outside if deemed expedient.

County Courts were established in England in 1825, the jurisdiction being then limited to actions up to £10. Numerous extending acts have since been passed, and up to December 31, 1904, actions to the £50 limit, or by agreement up to £100, could be brought therein. The act which came into operation January 1, 1905, however, raised the limit of the ordinary jurisdiction to £100. There are now 54 county court circuits, and about 500 courts. Annually over a million and a quarter actions are instituted in our county courts, and of nearly four millions sterling claimed therein in the aggregate every year over one-half is recovered. Of the total number of bankruptcy petitions something like 75 per cent. are filed in the county court.

Coup d'Etat, a sudden act of State of a revolutionising character and carried out by force. The best known example of modern times was the overturning of the French National Assembly by Louis Napoleon in 1852, whereby he became Emperor.

Courier, a servant or factotum accompanying a person or party on a journey, to make and superintend the arrangements as to conveyance and accommodation; formerly the term implied a messenger despatched on any mission of importance necessitating speed and circumspection.

Court Leet, a court of record held annually before the steward of any particular manor or lordship; anciently the term meant a local criminal court for dealing with petty offences.

Covenanters were a body of Scottish Presbyterians who in the cause of religious liberty, in 1638, and again in 1643, pledged themselves to uphold the Presbyterian faith, as against both prelacy and popery.

Covent Garden, in London, now a great flower and fruit market, was once a convent garden owned by the abbot and monks of Westminster.

Crabs are familiar crustaceans, carrying a shell, breathing through gills, and being provided with ten external limbs or claws, the side and smaller limbs being used for walking, and the two front claws serving as fingers for grasping purposes. There are many varieties, including land crabs, spider crabs, red crabs, etc. Soft shell crabs are the ordinary edible crabs at the moulting period.

Crape, a light, crimped fabric made from silk, the natural gum being utilised for the production of the crisp, wavy character of the material. A coarser kind of crape is made from cotton.

Creed, a brief enumeration of a particular belief or religion. The Apostles' Creed is adapted from 1. Corinthians, xv. 3-8. The Nicene Creed, which proclaims the Godhead of Christ, was promulgated at Nicæa in 325. The Athanasian Creed, which expounds the doctrine of the Trinity, dates from the 5th century.

Cremation, the ancient custom, to some extent revived in modern times, of burning the dead. Many scientific men commend the practice on hygienic grounds, and numerous eminent people have in recent years been cremated in accordance with instructions given by will. The principal crematoria in England are at Woking and Golders Green. There are other crematoria at Manchester and Glasgow.

Creole, a West Indian and Spanish American term applied to a person born in the country but of a foreign race. It is also loosely used to indicate a negro born in the country, not brought from Africa.

Creosote, a substance obtained from coal tar by fractional distillation from crude pyrolytic acid. It is a valuable antiseptic, prevents decay in wood, and is used to give a peaty flavour to whisky.

Creasy (or Cr  cy), the French village, near Abbeville, where Edward III. gained his great victory over the French in 1346.

Crataecous System is the term given to the uppermost strata of rocks of the Mesozoic period. It has the following sub-divisions: Maestricht beds, chert with flints, chert bed of flints, chalk marl, upper greensand, and gault.

Cricketer, an old English outdoor game, played as

far back as the 13th century, and now the national summer game. (See Pears' "Dictionary of Sports and Pastimes.")

Crickets, a genus of insects of the grasshopper order, which move by leaps. The male produces a chirping noise by the action of its wings.

Crimoean War was begun in the Spring of 1854, and lasted until March, 1856. Great Britain, France, Sardinia and Turkey were engaged as allies on the one side, and Russia alone on the other.

Crimp, a person whose nefarious occupation was to decoy men into naval or military service for a consideration or, alternatively (sometimes also incidentally), one who kept a house of accommodation to which sailors were allured and plundered. The payment of "crimpees" by ship-captains or owners is now illegal, and "jack ashore" is protected as much as possible from land-sharks of the crimp genus.

Crinoline was the name given to a stiff material, originally of horse hair, worn by ladies as a skirt-expander from about 1855 to 1860. It was a modern adaptation of the farthingales and hoop skirts worn in earlier times.

Crocodile, the name of the largest existing reptile, and classed with the alligator and the gharial. The crocodile inhabits the Nile region, the alligator the lower Mississippi, and the gharial is found in the waters of the Ganges.

Crofters are farmers of the western coast-islands of Scotland, who occupy very small holdings and eke out a living by fishing and other occupations.

Cromlech, the name given to an ancient monumental erection consisting of a large rough stone placed on three or more upright stones and found in various parts of Great Britain and the Continent.

Crookesite, a brittle mineral of leaden-grey hue and metallic lustre, found in Norway, and named after Sir William Crookes, the discoverer of thallium.

Crore, a Hindoo word meaning ten millions, and used commercially to signify that number of rupees.

Crozier, the staff, or crook, of a bishop carried before that dignitary on special episcopal occasions. It is generally richly decorated in gilt at the top.

Crow, a genus of well-known birds, including the common crow, the rook, the raven, and the jackdaw. It is a gross feeder, living on flesh, garbage, insects, etc., is of black plumage, and builds in trees.

Crusades were military expeditions undertaken by some of the Christian nations of Europe with the object of wresting Jerusalem from the Mahomedans. Peter the Hermit started the agitation in 1095, and from that date to 1271 various crusades were undertaken. There were eight crusades in all: 1st, 1096-9, under Godfrey of Bouillon, which succeeded in capturing Jerusalem; 2nd, 1147-9, led by Louis VII., and unsuccessful; 3rd, 1189-92, in which Richard I. took part, against Saladin, also unsuccessful; 4th, 1202-4, led by Count Baldwin of Flanders, and resulting in the founding of a Latin empire in Constantinople; 5th, 1217, led by John Bussane; 6th, 1228-9, under the Emperor Frederick II.; 7th, 1248-50, led by St. Louis (Louis IX. of France); and 8th, and last, 1270-71, under the same leadership, but resulting in failure. Millions of lives and an enormous amount of treasure were sacrificed in these enterprises, and when all was done Jerusalem remained in the possession of the "infidels."

Cryolite, a mineral found in extensive beds in Greenland, and one of the main sources of aluminium. It is also used for making a creamy white glass in conjunction with silica and oxide of zinc.

Crypt, a vaulted subterranean portion of an abbey, cathedral, or church, now generally used for burials or monumental purposes.

Cryptogamia, the twenty-fourth and final order in the botanical system of Linnaeus, including the Fungi, Algae, Filices, and Musci.

Crystal Palace, a gigantic glass and iron building standing at Sydenham, erected in 1854, mainly from the materials of the Hyde Park Great Exhibition building of 1851. It covers over 200 acres, with the grounds. Financial difficulties made an application to the Court of Chancery necessary in 1911, and a sale of the estate was ordered. Attempts were

made to save the property for the nation, and the Court fixed £220,000 as the sale price. The Earl of Plymouth thereupon paid a deposit of £20,000, and the public was appealed to for subscriptions for the balance. On June 30, 1913, a sum of £50,000 was still wanting, although meanwhile Lord Plymouth had advanced the money for the legal completion of the purchase. Within twelve days from June 30, however, in response to an appeal through the *Times* the £50,000 was raised, and the Crystal Palace now belongs to the people.

Gubism. (See Post Impressionism.)

Guckoo, a well-known migratory bird which is found in Great Britain from April to July, and has a very characteristic note, uttered during the mating season only by the male. It lays its eggs in the nests of other birds, but only one egg in each nest.

Gudeese, the name of a Scottish monastic fraternity, not attached to any of the recognised orders, and existing from the 9th to the 14th century.

Gulaiform, the term applied to the arrow-headed characters found in Assyria, Persia, and Mesopotamia. Good examples may be seen in the British Museum, some of them several thousand years old.

Gupola, the inner portion of a dome. Famous cupolas are those in the Roman Pantheon, the Mosque of St. Sophia at Constantinople, St. Peter's at Rome, and St. Paul's in London.

Gurfew, the bell which William the Conqueror ordered to be rung at eight o'clock each night in the towns and villages of Britain, as a signal to the inhabitants to extinguish lights and go to bed. It was abolished in 1700, but at Ripon, Sandbach, and Wokingham, the curfew is still rung as a matter of custom.

Gurlew, a wading bird of which there are several species. It frequents marshy places, feeds on worms and insects, and possesses a very long-curved bill.

Cyanogen, a compound of nitrogen and carbon, obtained from heated dry mercury cyanide, and highly poisonous. It combines to form numerous cyanides, and is of great use in producing, in combination with iron, various deep blue pigments, including Prussian blue, Chinese blue, etc.

Cycling, a recreation largely indulged in by all classes. Cycles have undergone great improvements in recent years, the machines now in universal use, of the "safety" order, being easy to ride, light of weight, and capable of being ridden at a good speed. They can now be bought from £5 to £25.

Cyclone, a circular, whirling wind of great power and intensity, occurring in warm climates.

Cymri, or Kymri, a branch of the Celtic race which settled in Wales and Cornwall.

Cynics were a set of Greek philosophers, founded by Antisthenes, the pupil of Socrates. They held that virtue was the only good, and condemned arts, sciences, pleasures, and riches. Diogenes was the most famous of the cynics.

Cynocephalus, a genus of monkeys of the Old World with dog-like heads, and belonging to the baboon branch of the Simiadae.

Czar is the title of the Emperor of Russia, and is derived from Caesar. The first Czar was Ivan IV., crowned in 1547. The Czar's wife is styled Czarina, and his eldest son Czarowitch.

Czechs are a Slavic branch, and include the Bohemians, the Moravians, and the Slovaks; they inhabit Bohemia, Moravia, and North Hungary, and number some 7,000,000.

D

Dab, a species of flat fish, common round the British coast, and a better table fish than the flounder.

Dabber, a mass of cotton-wool or similar soft material fastened in a circular form, and used by etchers and engravers for "dabbing" their plates.

Daboys, an Indian viperine serpent, venomous, and of nocturnal habits, of the genus *Daboia*.

Dace, a small fresh-water fish of the carp family, of elegant shape and silvery appearance.

Dacelo, a quaint-looking bird of the kingfisher order, common to Australia, one variety of which is known as the "laughing-jackass."

Beeshound, a German badger-hound, remarkable for its short legs and long body.

Besite consists of plagioclase and quartz, together with minerals of the hornblende and pyroxene families. Occurs mostly in Transylvania and the Cordilleran districts of America.

Besouts, Indian brigands, or professional robbers, who were formerly very numerous and terrorised the districts they infested, especially Lower Bengal. Of late years they have been in great part dispersed, but bands of them still give trouble in the more remote places.

Besydium, a genus of plants of the yew family, native of New Zealand and the East Indies, the young branches of which are used in the making of a beverage not unlike spiced beer.

Besyl, a measure in versification, consisting of a foot of three syllables, the first long, and the second and third short, as *lovely, verily*.

Besylomanoy, the art of divination by means of finger rings, now less resorted to by professors of the occult than formerly.

Besylomya, a South American rodent of the size of a rat, possessing a long scaly tail.

Besylotus, a fish of the eel family, with wing-like pectoral fins; sometimes known as the flying fish, though that appellation is more generally given to *Exocoetis* species.

Besol, a term denoting the portion of a pedestal between the base and the cornice; also applied to the lower part of the walls of a room when decorated differently from the upper part.

Besol, a kind of fresh-water duck, with long supple tail, found in Europe, Asia, and America. The pintail duck belongs to this genus.

Besol, a sharp-pointed instrument for stabbing, in frequent use in mediæval times as a private weapon, and still occasionally carried on the person in Italy and Spain.

Besol-ale, a kind of liquor often referred to in 16th century English literature, and sold at the sign of the Dagger in Holborn, a London house much frequented by the gallants of the time.

Besol, an edifice dedicated to the custody of relics of Buddha, and numerous in the temples of Ceylon and other Buddhist countries.

Besol, the feast of the Plutistines in honour of Dagon, their god, which was depicted with the head of a man and the lower part of the body like a fish.

Besol, a photographic process invented in Paris by M. Daguerre during the years 1824-30, resulting in the employment of the camera for the exposure of a silver plate, sensitised by iodine fumes in a dark chamber.

Besol, a kind of boat much used on the Nile, broad at the stern and tapering off gracefully at the prow. It carries one or two mats and sixteen sails.

"Daily Chronicle," a London morning Liberal paper, founded by Mr Edward Lloyd in 1866, and incorporating the *Clarendon News*. Its price was a penny until 1904, when it was reduced to a halfpenny.

"Daily Graphic," an illustrated penny daily morning paper, started in 1890 as an adjunct to the weekly *Graphic*.

"Daily Mail," an Imperial-Unionist halfpenny morning paper commenced in 1896 by the Harmsworths.

"Daily Mirror," founded in 1904 by the Harmsworths as a penny morning illustrated paper for women, but, being unsuccessful on those lines, was turned into a general halfpenny illustrated, and became popular.

"Daily News and Leader," a London Liberal morning paper, started as the *Daily News* in 1840, whose first editor was Charles Dickens. Among its later editors have been Sir H. W. L. W. W. W. T. Cook, and Mr A. G. Gardiner. Its price was reduced to a halfpenny in 1904.

"Daily Telegraph," a penny Imperial-Unionist morning newspaper, started in 1855, and having a very large circulation. Lord Burnham is chief proprietor. Sir Edwin Arnold was its editor for many years.

Daimio, a feudal lord of Japan, forming a class who, from independent princes, have declined to governors of their particular districts under the rule of the Mikado.

Dairies are properly places where milk is stored and converted into butter and cheese, but in large cities the term is applied to shops where milk is sold only. Great improvements have been made in recent years in the construction and management of dairies, and hand processes in the making of butter and cheese have been largely superseded by mechanical power.

Dais, an elevated part of a floor, or a platform, in a large room or hall. It usually has a seat or seats upon it, and is covered with a canopy. It is the place of honour occupied by the most distinguished personage or personages, as the King, the Lord Mayor, a bishop, etc.

Dak, the name given to the native post service in India, maintained by relays of runners.

Dalmatian Dog, the old-fashioned coach dog, white, spotted with black. Often called the "plum-pudding dog."

Dalmatic, a wide-sleeved ecclesiastical vestment, reaching below the knee. Worn by bishops and deacons over the alb or stole.

Dana, the scientific name of the fallow deer, which is fawn coloured or brown, dotted with white spots.

Damaak, a textile fig red fabric, made in various forms, with silk threads of many colours, as originally woven in the city of Damascus; in a combination of silk and wool or cotton; in linen only for table cloths, etc.; or in cotton.

Damaskeening, the art of inlaying one metal upon another, largely practised in the East in mediæval times, especially in the decoration of sword blades. In its modern form it has been greatly developed.

Damp, humidity, moisture, assumes numerous forms. Fire-damp, however, has nothing to do with humidity or moisture (the term damp in this case being derived from the German, *dampf*, vapour), but consists of a poisonous vapour met with in mines and often the cause of explosions; choke-damp is mainly composed of carbonic acid gas, and causes suffocation.

Dan, a mining term applied to a vessel in which water is conveyed to the surface.

Danahite, a transatlantic mineral occurring in various parts of the United States of America.

Danburite, a substance found in crystals in various regions of America, and in Switzerland, and of a yellowish-white colour. A borosilicate of calcium.

Dancette is an architectural term, applied to a form of zigzag moulding often found in ancient buildings of the Romanesque or Norman order.

Dancing, a form of exercise, generally performed to a musical accompaniment and comprising many different styles. It was originally adopted as a religious observance, was gradually developed with the advance of music, and in modern times has been highly cultivated professionally. On the stage it is one of the greatest attractions in the form of ballet, and in private life is much indulged in, balls and dances forming a leading society diversion. Among the different styles of dances, step dances performed by one person—such as the jig, hornpipe, etc., are among the oldest, while dances executed in pairs, including the waltz, polka, schottische, etc., are more modern. Of what are called square dances, the country dance takes precedence in point of time; they also comprise the quadrille, the reel, mazurka, etc. Minuet, gavotte, waltz, etc., belong to the strictly period of the 17th and 18th centuries. Certain foreign dances of questionable taste, such as the tango, have had a temporary vogue in recent years. For references to the chief dances see *Sports and Pastimes* section. Also see *Ballet* in this section.

Dandie Dinmont, species of Scotch terrier named after the well-known character in *Uncle Ransome*.

Dandies, the name given to a class of exquisite prominent in early Victorian days, and attracted attention by excessive regard for dress.

Danegeld, a tax imposed in England in Anglo-Saxon times to raise funds for resisting the Danes. Edward the Confessor abolished the tax, but it was

revived by the Conqueror and subsequently retained, under another name, long after all danger from the Danes was past.

Danelaw was the law enforced by the Danes in the fifteen English counties occupied by them in the 9th century, and extending from the Thames to the Tees northward, and from Watling Street to the German Ocean eastwards. The country occupied was also called the Danelaw or Danehagh.

Danes' Blood, a common plant of the elder family, deriving its name from the tradition that it originally grew from the blood of Danes killed in battle.

Danites, the title by which a secret order of Mormons was known, and to whom many serious crimes were attributed.

Darien Project was a scheme entered upon at the close of the 17th century by Paterson, the Scotch financier, for colonising the Isthmus of Panama and thereby diverting trade in the direction of Scotland. A large number of Scotch people went out, and much money was sunk in the enterprise, but owing to the deadliness of the climate and other causes the scheme failed utterly.

Darter, a genus of birds of the pelican family, with pointed bill and long serpent-like neck. Two species only are known: one belonging to Africa, the other to America.

Dastanake, the name of a serpentine lizard of the Aconitas family, noted for the darting manner in which it attacks its prey.

Dasyurus, the name of a carnivorous quadruped, hairy tailed, and of the opossum family, with white spots; confined to Australia and Tasmania.

Datary, a Roman ecclesiastical functionary, who acted for the Pope in all matters relating to the issuing of grants and dispensations; the datary or dispatcher of the Papal bulls.

Data Palm, a native of Northern Africa, where it is grown in great profusion. It is also known in Southern Europe and Western Asia to some small extent. It grows from 60 to 80 ft. high, and its fruit is of great value as a food. From the leaves the Africans make roofs for their huts; ropes are made from the fibrous parts of the stalks; and the sap furnishes a stimulating beverage.

Daubreite, a substance of a yellow colour found in earthy masses in Chili, and a bismuth oxychloride. Named after Daubry, the French mineralogist.

Dauphin, the title borne by eldest sons of the Kings of France from 1349 to the Revolution of 1830.

Deauw, an animal of the zebra order, with black and white stripings. A native of Africa and usually known as Burchell's zebra.

Deavenport, the name given to a small ornamental writing desk much in vogue about the middle of the 18th century.

"**Davy Jones**," a nautical term of a humorous turn supposed to apply to the spirit of the sea; thus, it is a common saying among sailors, when a person dies at sea, that he is committed to "Davy Jones's locker."

Day, a period of 24 hours; or the period of the sun's position above the horizon each day. The exact measure of time covered by a day is 23 hours, 56 minutes and 5 seconds. The Babylonians counted their day from sunrise to sunrise, the Hebrews and Athenians from sunset to sunset, and the Romans from midnight to midnight.

Day Nurseries are modern institutions, the result of a movement for the protection of the young children of working people, and consist of ~~2~~ ³ ~~3~~ ⁴ ~~4~~ ⁵ ~~5~~ ⁶ ~~6~~ ⁷ ~~7~~ ⁸ ~~8~~ ⁹ ~~9~~ power. The first decemvirs were elected in 451 B.C.

Deciduous Trees are such as shed their leaves, or "fall" at maturity, or at certain seasons, as distinguished from evergreens or permanent foliaged trees or shrubs.

Decimal System is based on a unit of 10, and for purposes of calculation is much simpler than the English system. It is in operation in France and other European countries, also in the United States of America.

Decimation was a term originally applied to the punishment of putting to death of every tenth person, but in modern times is used in its broader significance to indicate any form of wholesale slaughter.

Deck, the floor of a ship, and in large vessels comprehending the first or lower deck, middle deck, and main deck, which is the uppermost, except the reserved elevated part known as the quarter-deck.

Declaration of Independence was an Act by which the first American Congress, on July 4th, 1776, declared the American colonies to be independent of Great Britain.

Declaration of Rights. (See *Bill of Rights*.)

Decollation is the act of beheading or decapitation, as a form of punishment. Decollation was very generally resorted to in mediæval times, but it is confined mainly to France at the present day, the guillotine being the beheading instrument.

Decomposition is the act of disintegrating the elements of any compound substance. Oxygen and hydrogen are obtained by the decomposition of water, but these substances themselves cannot be decomposed.

Decree is a special edict or regulation issued by a supreme or governing power. The judgment of a superior court is also called a decree.

Decree Nisi, a law term used in regard to a Divorce Court decree which annuls a marriage, if at the end of six months nothing arises to interfere with the decision, whereupon it is made absolute, and the parties are free.

Dedication implies the consecration to sacred purposes of any building or ground, and has also a more general application to the setting apart of any building, institution, or enterprise to a special use. The term also attaches to the inscription by an author of any book or work to a patron or friend as a mark of esteem.

Deemster, a chief judge of the Isle of Man.

Deer are hoofed, horned, or antlered ruminants very widely distributed, and including many species. No true deer are found in South Africa or Australia.

Defender of the Faith, a title given to all English monarchs from the time of, and beginning with, Henry VIII. Originally conferred by Pope Leo X, then withdrawn, and afterwards re-conferred by Parliament.

Delism upholds the theory that there is a personal God, but rejects revelation and the doctrines of the Christian religion.

Delawareans, a tribe of Red Indians once very numerous in Philadelphia, on the banks of the river from which they take their name, but now settled for the most part in Arkansas.

Delft ware, a kind of enamelled pottery first made at Delft in Holland in the 14th century.

Deliquescence, the process of liquefaction or dissolving by the absorption of moisture from the atmosphere. For instance, chronic acid crystals on exposure to the air quickly deliquesce.

Delphinus, the scientific name for the dolphin family, and consisting of numerous species. Each jaw contains from 30 to 50 small pointed teeth.

Delta, a triangular tract of land between diverging branches of a river at its mouth, and so called from its general resemblance to the Greek letter Δ delta. The best known examples are the deltas of the Nile, the Ganges, the Niger, and the Mississippi.

Delta metal, a copper and zinc alloy, with a small portion of iron added, possessing almost the strength of iron and non-rustible. Has been widely adopted for industrial purposes.

Deluge, the overwhelming of a country by water, a

term commonly applied to the story of the world-wide deluge contained in the Bible, in which Noah and the Ark figure. A similar tradition lingers in the mythologies of all the ancient nations.

De Lunatico Inquirendo, the name for a writ sanctioning an inquiry into the condition of mind of a supposed insane person, with power to secure a due administration of his affairs if shown to be insane.

Democracy is the condition of direct popular government—"by the people for the people." The executive powers being vested in representatives elected by the people. A republic is in theory the most perfect form of democracy, as in the United States, France, Switzerland, Argentina, Brazil, Mexico, and other States, though in practical working the democratic idea is to some extent lost sight of in some of these, and something akin to dictatorship prevails. In Great Britain the Government is a democracy in so far as the House of Commons is concerned, and aristocratic domination is supposed to be held in check by the power of popular representation.

Demoiselle, the popular name of the Numidian crane, one of the largest of wading birds.

Denarius, a silver coin of ancient Rome, worth about 7d. English, first coined 265 B.C.

Denticulæ, a member of the moulding ornamentation of Ionic and also Corinthian entablatures, over the frieze and under the corona, but properly speaking, because of its projection, part of the latter. It consists of a row of relieved rectangular blocks at regular intervals, resembling teeth, hence the name.

Dendrite, any stone or mineral on which appears natural tracery resembling trees, leaves, or flowers, the result of the action of the hydrous oxide of manganese.

Denier, an old French coin, and the chief silver coin of Europe during the mediæval period.

Density, a term by which we assess the quantity of matter in any given bulk. As Clerk Maxwell puts it, "the quantity of matter per unit of space is defined as the density of the mass filling that space." The density of gold is 19.3, silver 10.5, copper 8.9, earth 5.6, diamond 3.5, air 0.0013.

Dental, pertaining to the teeth; as dental forceps, dental cavity, dental pulp, etc.

Dentex, a kind of fish common in the Mediterranean, possessing conic teeth and scaly cheeks.

Deodand, the name given in old English law to a personal chattel which had been the cause of an individual's death. This chattel—it might be a cart that had run over and killed a man—was declared a deodand and forfeited to the king to be applied to religious uses. Deodands were abolished in 1846.

Deodar, a coniferous tree of the cedar order, largely grown in India.

Department, a division of a country or province, applied in France to the chief administrative territories, which again are subdivided into arrondissements. In the work of British government, each separate division is named a Department. Thus we have the Home Department, the War Department, the Colonial, Indian and other Departments.

Depas, a double-handled drinking-cup used in ancient Greece, and referred to by Homer.

De Profundis (out of the depths), the first two words of the Latin version of the 137th Psalm, and commonly used to designate this psalm.

Derby, the leading English horse race, run on the 1.15.00 course on the last Wednesday in May or the first Wednesday in June. Originated in 1780 by the twelfth Earl of Derby, carried with it a stake of about £6,000, and is competed for by the best three-year-olds of the time. Among recent owners of Derby winners may be mentioned the King, Lord Rosebery, Sir J. Miller, Mr. Lionel de Rothschild, and Mr. Richard Croker, the former "Tammany" chief of New York.

Derham, an ancient Arabian silver coin, still current in Eastern countries, worth about 3d. English.

Derrick, the name of a special jib crane, for lifting and moving heavy weights. It was originally applied to a kind of gallows built by a Tyburn hangman called Derrick in the 17th century.

Dervish, a Mahomedan mendicant monk, of which there are many varieties, including howling and whirling dervishes. There are over 30 orders of dervishes in all.

Descloisite, a scarce mineral substance, scientifically described as a vanadate of lead and zinc, found in Argentina and other parts of the American continent, named after Des Cloizeaux, a French mineralogist. It is olive-green in colour.

Deserts consist of large barren, uninhabited tracts of country, and occur chiefly in hot climates. The most famous are those of Sahara, Arabia, and Central Asia (the Steppes). At one time a large uninhabited region beyond the Mississippi was called the Great American Desert, but it is desert no longer, having cities and prosperous farms built upon it.

Desman, a species of musk rat inhabiting the regions of the Volga and the Don in Russia. It is an expert swimmer and diver, and burrows on the river banks.

Desmidsiaceae, a kind of microscopic fresh-water algae, unicellular, and often assuming beautiful chain-like forms.

Destiny, a supposed foreordained end, an overmastering force that impels the current of events, to a final climax. In ancient times, fate, or destiny, was a common belief, and regarded as "unshunnable, unloose, unchangeable," as Shakespeare has it.

Detectives are secret police employed in collecting evidence or effecting the capture of offenders in cases of more than ordinary difficulty. In addition to the official class of detectives, there are numerous detective agencies in the chief cities of the world, and in 1904 some rather startling disclosures were made in the London courts regarding the methods of some of these agencies.

Determinism, the theory that man's actions are "uniformly determined by motives acting upon his character." The term was first used by Sir William Hamilton, and does not support fatalism.

Detonating Powders are chemical compositions which explode when heated or suddenly struck. There are many of these compounds. Ammonia with silver or gold, the chloride and iodide of nitrogen, and the fulminates of silver and mercury are among the best known detonating compounds.

Deuteronomy, the fifth book of the Pentateuch, purported to have been written by Moses, and containing the statement of the law, but regarded by many modern critics as of a much later period.

Deutzia, a genus of East Indian deciduous flowering shrubs, of the Syringa order. The inner bark of the stems is used in Japan for poultices, and the leaves for polishing purposes.

Deviation of the Compass, caused by the counter-attraction of the iron of a ship, is generally corrected by putting magnets near the compass, and by careful watching and calculation.

Devil, the spirit of evil, Satan, Beelzebub, "the tempter," the enemy of God and of good, to whom a varied personality has been given by different religious systems. In different ages, Milton has realised the higher spiritual conception of the tempter, Goethe the lower human idea.

Devil-fish, a strange marine animal of large size and of several species. As it is met with in European waters it is called the fishing frog, and the chief American species is the giant ray.

Devil-worship consists in a belief in, and of incantations to propitiate, evil spirits. This kind of worship is confined to certain primitive races of Asia and Africa, and a few Red Indians of North America.

Devise, an apparatus by which the relation between "the angular velocity of the earth and that of a horizon around the vertical of any place whatever" can be ascertained.

Devitrification, the process of rendering glass soft and pliable, incidentally depriving it of transparency.

Devolution, a term applied to a political propaganda advanced by the Irish Reform Association, of which Lord Dunsany is president, for bringing about an understanding between the professional, commercial, and landowning classes of Ireland, and organising a movement for the decentralisation of

Irish financial administration, and the adoption of a larger measure of self-government. The discussion of this movement with the Dublin Castle officials in 1905 led to complications resulting in the resignation of Mr. Wynneham, the Chief Secretary, and his condemnation of Devolution as more objectionable than Home Rule.

Devonian System in geology refers to the strata between the Silurian and the Carboniferous formations, and is also termed the Old Red Sandstone formation.

Dew is the vapour which collects in small drops on the surfaces of substances by atmospheric condensation, chiefly in the night time. It is most abundant in hot climates and gathers freely on bodies that are not good conductors of heat, such as grasses, etc.

Dextrin, a white, odourless, viscid substance of the same composition as starch, from which it is obtained. It is used as gum, being the material put on the backs of postage stamps and other articles which are required to be made adhesive. It is also utilised in calico printing.

Dhole, the wild dog of the Deccan, of a bright bay colour, and living on game, which it hunts in packs.

Dhow, a one-masted trading vessel, much in evidence on the east coast of Africa and the Red Sea, and formerly employed in the transportation of slaves.

Diacope, a species of fishes of the perch family, possessing a notched operculum and suberculate; inhabitants of the Indian seas, and often reaching a length of three feet.

Diaadem was originally a head ornament or fillet worn only by royal personages, and from being of plain white material came to be of rich gold embroidery, and set with precious stones. Now the term is applied to a crown or other head-bud worn by royalty, or the head ornament of a peeress, which, however, is more frequently styled a tiara.

Diæresis, the sign () placed over the second of two vowels coming together, and indicating that each is to be pronounced distinct from the other, as *aerated*; also employed to indicate that a vowel, ordinarily silent, must in this case receive pronunciation, as "Oh, cursed spite"; "My beloved," etc.

Diagrometer, a form of electroscope for measuring the conducting power of different bodies, having a magnetised needle for an indicator, invented by Koussean.

Dial, or **Sun Dial**, an instrument for telling the time of day by a shadow thrown on a marked surface. This was the first form of outdoor clock, and was introduced into Europe from the East. It is made in various forms—horizontal, upright, or inclined.

Dialect is a form of speech special to a locality or district, and differing from the general literary language of the country. In England these dialects are numerous, but in all of them some survivals from what was once good old English speech are to be found. From the works of Chaucer, Spenser, Shakespeare, and from even later writers, many words are to be read that are obsolete as regards modern literary expression, but are still familiar in dialect idioms. The dialect that has forced itself most into modern literature is the Scotch, a fact largely due to the compositions in dialect of Burns and other Scottish poets. For the full understanding of the force and meaning of English dialects, Professor Wright's monumental *Dictionary of Dialects* is to be commended.

Diallage, a kind of pyroxene, green in colour, and of foliated structure: common in serpentine rocks.

Diamagnetism, the phenomena revealed by certain substances which, under magnetic influence and suspended, assume a position showing the longer axis at right angles to the magnetic lines of force.

Diamantine, ultimately hard, adamantum.

Diameter, a straight line passing through the centre of a circle or other figure, terminated at both ends by the circumference. In architecture, the diameter of the lower bed of a column, divided into 60 parts, constitutes the scale whereby all the parts of a classical order are measured.

Diamond (a corruption of *adamanant*) is pure carbon, and the most valued of precious stones, though

before the art of cutting was perfected, diamonds were considered inferior to emeralds and rubies. India was in former times the chief diamond country. At the present day, South Africa yields the largest quantities, and in Brazil and Australia there are many rich diamond mines. Diamonds mostly occur in alluvial deposits. They form the hardest known substance and have a high refractive power. The largest diamond ever found is the Cullinan Diamond, which was discovered in the Premier diamond mine, near Pretoria, in South Africa, in January, 1905, and in 1907 was presented to the King in commemoration of the granting of self-government to the Transvaal; it weighs 3,030 carats, and is valued at fifteen million sterling. It is three times as large as the largest of the other big diamonds of history. The largest diamonds found previously were:—

	Place of discovery.	Weight in carats.
"Excelsior"	South Africa	971 (uncut)
"Great Mogul"	India	280 (cut)
"Regent"	India	410 (uncut)
"Orloff"	India	136 (cut)
"Koh-i-noor"	India	202 (uncut)
		103 (cut)

"Excelsior" was found by Captain Ed. Jorgansen. In its natural state it was valued at £1,000,000, but purchasers of such gems are not plentiful, so in 1904 it was cut into nine smaller gems. The "Great Mogul" is another famous diamond which has vanished. It weighed 280 carats after being cut, and in size and shape resembled half an ordinary chicken's egg. Its history is romantic. It was seen at the Court of Aurangzebe in 1665 by a French jeweller, stolen at the sacking of Delhi in 1739, and brought up to the King of France. The "Orloff" which adorns the Czar's sceptre. It was stolen from an Indian idiot's eye, and sold to Catherine of Russia. It now weighs just on 200 carats. The famous "Koh-i-noor" is an Indian stone, and is now the property of Queen Alexandra, to whom it was bequeathed by Queen Victoria. It weighed nearly 500 carats uncut, but by bad cutting was brought down in weight to 100 carats. Other famous diamonds are the "Pitt" (136 carats), the "Florentine" (133 carats), and the "Star of the South" (124 carats).

Diamond-beetle, a South American beetle of very brilliant, luminous, spotted markings.

Diana Monkey, a large African monkey that derives its name from the supposed resemblance of its white frill to the crescent bow of the goddess Diana. The Palatine monkey of Pennant, *Cercopithecus Diana*.

Diana's Temple at Ephesus. The temple of Ephesus was built after the model of Karnak, and was looked upon as the greatest of the "Seven wonders of the world." Its interior length was 425 feet, its breadth 290 feet; its roof was supported by 127 richly sculptured pillars, each the life-work of a king. Originally erected by Croesus, it was enlarged and enriched by every succeeding prince. On the day that Alexander the Great was born, Erostratus tried to destroy it by fire, and he partly succeeded; but the Ephesians rebuilt it, and the world at large contributed to its restoration. Some years later Alexander the Great commanded his engineers to improve and beautify it. At the entrance to this famous temple was placed the "Altar of Sacrifice." In the Atrium was a second altar, the "Altar of Sweet herbs." At the entrance to the Penultima was a third altar, the "Altar of sweet incense," on which nothing was placed but the richest and most costly perfumes. Through the opening in the purple curtains glimpses might be obtained of the statue of the mighty goddess.

Diapason, the concord of the first and last tones of an octave, and the fixed rule by which organ pipes and other instruments are adjusted to proper pitch.

Diaper, a figured textile fabric, the pattern of which is small and is shown in the material, without resorting to colour or difference of fibre. Many kinds of

decorative products, treated in the same style, are termed diaper work.

Diaporesis are medicines used to induce perspiration, and thereby increase the action of the digestive organs.

Diaspore, an infusible hydrate of aluminium, almost colourless, and occurring in crystals and foliated masses. A small portion placed in a flame instantly disperses.

Diatite, a hard cement compounded of shellac and silica.

Diatomic Acid, an organic acid derived from diatomic alcohol.

Diatonic Scale represents the use of musical tones, intervals, and harmonies without chromatic variation.

Diæum, the name of a group of small sun-birds, with red plumage and short, slender bills, inhabiting the East Indies.

Dice, an ancient game played with small ivory cubes, each face of which is spotted with black marks like domino pieces, and is thrown from the box held in the hand, the one who throws the highest number of spots being the winner. The Lydians played dice.

Dictator, the title given by the ancient Romans to their supreme magistrates under the republic, in times of great emergency. The term was limited to six months, but while it lasted the Dictator's rule was absolute. Another class of dictator was the Greek Tyrant, and many despotic rulers of more recent times have in effect, if not in name, been dictators. In Paraguay and other South American countries the title of Dictator has been borne by numerous rulers.

Dictionary, an alphabetical list of words, giving their meanings, and in many cases their pronunciation, and etymological significance. The earliest English dictionaries of any pretensions to accuracy and completeness were those of Bullokar (1616) and Cockeran (1623). Dr. Johnson's famous dictionary was published about the middle of the 18th century. Of the 19th and 20th century dictionaries, there are the Standard, the Century, Webster's, Ogilvie's, Chambers's, Nuttall's, Skeratt's, and numerous others, and from the 50,000 words of Johnson's day we now have Dictionaries of from 400,000 to 500,000 words. The most elaborate of English dictionaries, however, is the *New English Dictionary*, edited by Sir James A. H. Murray, LL.D., and Mr. Henry Bradley, now in course of publication. In addition to word dictionaries, there are dictionaries of many other kinds—of medicines, music, biography, technical subjects, &c.

Didymium, a supposed element discovered by Mosander, but pronounced by more recent investigators to be a compound of two elementary substances. It is a yellow-tinged white metal. The term didymium is also applied in botany to a genus of minute fungi, with double peridium, growing on rotten wood, bark, &c.

Dies Ira (the Day of Wrath), a famous 13th century Latin hymn, sung at burial services, and taking its place in translated form in the English hymnology.

Diet, an assembly of dignitaries, or delegates called together to debate upon and decide important political or ecclesiastical questions. The most famous Diets in history were those of Worms in 1495 and 1527, and the Diet of Augsburg of 1530, all of which dealt with matters of religious controversy awakened by the Reformation movement.

Diffusion is the process of mixing two fluids or gases by contact, and takes place by mutual attraction. It is most rapid between gases. Liquids diffuse much slower than gases and as it is laid down by what is called Graham's law—"the rates of diffusion of different gases are in the inverse proportion to the square root of their relative densities."

Digit, a finger or toe. In arithmetic any number of one figure is a digit, the nine Arabic numerals being indicated by the fingers in counting on them, as one, two, three, four, five, six, seven, eight, nine.

Dika Bread, a West African vegetable substance, prepared from the fruit kernel of the *Magnifera Gabonensis*, and somewhat resembling cocoa. It furnishes a nutritive food to the natives.

Dilemma, in logic is an argument which resolves itself into two alternative conclusions, each of which amounts to a denial of the proposition maintained. Hence the term the "horns of the dilemma." The often quoted example of a dilemma from Aulus Gellius may be repeated—"Every woman is fair or ugly; it is not good to marry a fair wife, because she will flit; it is not good to marry an ugly wife, because she will not be attractive; therefore, it is not good to marry at all."

Dilettante, a term applied to amateurs in any of the arts or sciences.

Dimensions are measured magnitudes and involve the qualities of length, breadth, and thickness. A line has only one dimension, length; a plane surface two, length and breadth; and a solid three, length, breadth, and thickness.

Diminutives are grammatical expressions denoting smallness or littleness, as illustrated in the suffixes, "kin," "ler," "ling."

Dimorphism, the quality of assuming two distinct forms not derivable from each other. For instance, carbon, which is graphite in one form, is the diamond in another. Pasteur demonstrated that dimorphism most commonly occurs when the two forms are close to the limit of their respective systems.

Dinar, a gold coin of the ancient Arab dynasties, usually of the weight of 65 grains troy. In the British Museum there is an example of a dinar struck in the time of Haroun-al-Raschid.

Dingo, the wild dog of Australia, which partakes largely of the character and aspect of the wolf. It is of a reddish colour with a bushy tail and is very destructive to sheep.

Dinner, the chief meal of the day. Was in olden times partaken of about midday, but the fashionable hour for dinner has undergone much change since then, eight o'clock being now the formal dinner hour in court circles. In the time of George II. it was four o'clock; under George IV. it was six o'clock; then it came to be seven; but Queen Victoria set the example of eight o'clock dinners.

Dinornis, an extinct bird of the ostrich order, some of which, judging from the fossil remains which have been unearthed, in New Zealand, must have stood about 14 feet high.

Dinosauria, the name of a group of extinct reptiles of the Mesozoic period, some of which were of immense size—much larger than crocodiles.

Dinoherium, a kind of extinct quadruped of enormous size, the fossil remains of which have been discovered in the Tertiary strata along the Rhine and elsewhere. It had a trunk like the elephant, and tusks, and is supposed to have been about 18 feet long.

Dioecese, a territory under the pastoral authority of a bishop. The term originated in the time of the Roman Empire, and represented then rather an administrative territory than an ecclesiastical one.

Dioptase, a variety of pyroxene occurring in prismatic crystals, and having for its bases, calcium and magnesium, with some slight addition of iron. It is found in Piedmont.

Diopside, a genus of insects of the fly family, peculiar for the enormous projection of the sides of the head. They are natives of the tropics of the Old World.

Diopside, a scarce copper ore occurring in prismatic emerald green crystals, and composed of silicate of copper; found in Tartary and Nassau, and sometimes styled emerald-malachite.

Diopside system, a method of illuminating light-houses by a central lamp which transmits light through a series of refracting lenses.

Diorama, a series of spectacular paintings exhibited in a darkened room with the light thrown on to the pictures in such a manner as to produce optical effects that give the appearance of reality. These effects can be varied so as to represent night or day scenes, or scenes of cloud or sunshine, as may be desired. The diorama was the invention of Daguerre and Bouton in 1822, and was first shown in London in 1823.

Diorite, a rock of crystalline structure composed of feldspar and hornblende, and occurring in associa-

tion with magnetite and apatite. It used to be classed as greenstone.

Diplodocus, a class of extinct mammoth reptiles belonging to Mesozoic times. Fossil remains of this reptile have been discovered in Colorado and Wyoming, and in 1895 a cast of one of these huge monsters, taken from the original in the Pittsburg Museum, was presented to the British Museum by Mr. Andrew Carnegie and is now to be seen at the Natural History Museum, South Kensington. It has been named the *Diplodocus Carnegiei*, and is 84 feet in length, having been reconstructed out of four defective skeletons all found in Wyoming. The height to the top of the spines of the dorsal vertebrae is nearly 14 feet. Four thousand centuries are supposed to have elapsed since it lived.

Diploma, a certificate of authority signed by the heads of universities, colleges, or other learned bodies, conferring upon the recipient some honour, degree or privilege, and usually affording evidence of the passing of a properly qualifying examination.

Diplomacy, the practice of official intercourse between nations, as carried on by ambassadors and other agents of states and governments.

Diplomatics, the science of diplomas, or ancient writings, and the deciphering of them. It is also, and now more commonly, called palaeography.

Diptera, an order of insects, the name of which was supplied by Aristotle. Their most characteristic is that they are two-winged, and the common house fly is the best known example. There are said to be 9,000 varieties of these insects in Europe alone, including gnats, blow-flies, no quots, scats, etc.

Diphthong, the conjunction of two vowels pronounced in one syllable. What is called a proper diphthong combines the sound of both vowels, as in "boy," "noise," "out," etc., while the improper diphthong only represents the sound of one of the vowels, as in "pail," "breach," "juice," etc. Belonging to the latter class are the diphthongs "ae" and "ce," but these are confined to words from the Latin or Greek.

Diptych was a folding two-leaved tablet of wood, ivory or metal, with polished inner surfaces, utilised for writing with the style by the ancient Greeks and Romans. The same term was applied to the tablets on which the names of persons to be commemorated were inscribed in the early church. In art any pair of pictures hinged together is styled a diptych.

Directory, a term applied to the executive of the later French Revolution period, and existing from October, 1795, to November 10th, 1799, when Napoleon succeeded in overthrowing it and establishing the Consulate. The term, as in general use, signifies a book in which names of "residents," traders, and others in any particular locality or sphere are recorded, such as the London Post Office Directory, the Directory of Directors, &c.

Dirge, a hymn or song of mourning and lamentation, which may be music only, or a song only, but is usually a combination of music and words.

Dirk, an ancient Scottish stabbing weapon, dagger-shaped but much longer and heavier. It was usually worn in a scabbard.

Discipline, a specific training in accordance with strict regulations, and applying to religious, military and civil guidance.

Discus, a circular piece of metal or stone about 12 inches in diameter, used in athletic contests by the ancient Greeks and Romans. Throwing the discus was a very favourite game, which was deemed worthy of celebration in the famous statue of a Discobolus of the 5th century, B.C., now preserved amongst the Townley marbles in the British Museum.

Disestablishment is the withdrawing of State support from Church organisation. The agitation for the disestablishment of the Church of England was somewhat active about a quarter of a century or more ago, and was the subject of an annual motion in Parliament, but for some years past the movement has slumbered. The Irish Protestant Church was disestablished in 1869. An agitation

for the disestablishment of the Church in Wales carried on for many years led to the passing of a Bill for this purpose by the House of Commons in 1913-14.

Diak, an astronomical term denoting the seemingly flat surface of celestial bodies as seen by the eye.

Dispensing Power was a right claimed by English kings of releasing any of their subjects from oaths and vows on payment of certain indulgence fees, but the Bill of Rights of 1689 abolished this privilege, and since then the Pope has been the only authority claiming to exercise such rights. It was the gross abuse of the dispensing power that led to the Reformation.

Dissenters are those who decline to conform to the uses of the Established Church. All Nonconformist bodies, whether Protestant or Papist, are included in the term Dissenters.

Distaff, the staff of a spinning wheel, being a cleft stick on which wool, cotton or flax was wound for spinning on the spindle. It was held between the left arm and the side. In olden times there was a "Distaff Day," which fell on the day after "Twelfth Day," so named because women were supposed to resume their distaffs on that day.

Distal, applied to the end of a limb or bone in anatomy, or to an organ in botany, furthest removed from the point of attachment.

Distance is the space between two objects, or between two points of time, and is calculated by various methods. What is called an accessible distance can be measured by an ordinary linear measure; inaccessible distances are not amenable to this measurement, but are calculated by triangulation. The line of distance is a straight line between the eye and the chief point of the plane; and the mean distance of a point from the sun is an arithmetical mean between its greatest and least distances.

Distemper, a pigment prepared for a special method of painting, and consisting of colours mixed with a binding medium soluble in water.

Distich, a term used in poetry to indicate a couple of lines, or verse, of a couplet idea, and, according to modern usage, rhyming.

Distillation is the process by which the spirit of a substance is obtained by evaporation and condensation. The process is effected by heating the substance in a still, whereby the liquid becomes volatilised, the volatile substance passing through a condenser and emerging in a liquid form. The volatile liquids are thus separated from those that are insoluble and non-volatile solid matters. Distillation is used in the production of spirituous liquors and various essences.

Distinguished Service Order was instituted by Queen Victoria in 1886 for rewarding exceptional service in the Army and Navy. Its badge is a gold cross, with a crown suspended on one side and the royal cypher on the other, each enclosed in a laurel wreath.

Uthyrambus, a Greek lyric composition originally written in honour of Bacchus, but afterwards developed in celebration of other gods and heroes, and characterised by excessive strains of laudation.

Diuretics are drugs or agents for aiding the secretion of urine.

Divertissement, a short musical entertainment which is usually accompanied by dancing.

Diving Bells are well-known mechanical contrivances filled with air in which a diver can sit and be lowered into any body of water, fresh air being supplied as the air in the apparatus becomes exhausted by means of a communicating flexible pipe. The diving apparatus now mostly used, however, is called the "diving helmet," an apparatus which fits over the head, and renders the diver free to move about at the bottom of the water in comparative safety.

Divorce is a legal dissolution of the marriage tie, and in England may be either complete, or limited—in the old legal term—a *mensa et thoro* (from board and bed). In the latter category may be included what is termed judicial separation, which does not allow of the separated persons remarrying. A wife can obtain divorce on proof that her husband has

been guilty of marital misconduct combined with desertion or gross cruelty, while a husband is allowed a divorce on the evidence of his wife's infidelity only. In England over a thousand suits for divorce are instituted each year, but not much more than half of them are successful. In the Courts of Summary Jurisdiction, however, the decrees of judicial separation amount to many thousands.

Dobra, a Portuguese gold coin, common in the 18th century, and of the value of about £3 11s. 9d.

Docket, a summary copy of any decree; a brief list, or label; derived from dock, to curtail.

Dockers' Strike, in connection with the London docks, occurred in 1889, and lasted for five weeks, over 16,000 men being directly concerned. Another strike of dockers took place in 1912.

Docks are enclosed water spaces wherein ships rest while being loaded or unloaded, or waiting for cargo. They are of several kinds. The wet dock is simply for loading and unloading; the dry dock, or graving dock, is for overhauling and repairing vessels, and is so constructed that, after a ship has been docked, the water can be drawn off; and the floating dock, a rectangular structure which is sunk beneath a ship and raises it. The largest series of docks in the world are those on the Thames, extending many miles. Those of Liverpool are the next largest. The launching of big vessels of the *Lusitania* and *Mauretania* type renders a large increase of dock accommodation necessary.

Doctor, a term of wide application, applying not only to such as practise medicine, but to doctors in all the learned professions, thus, there are doctors in Divinity, doctors of Laws, doctors of Philosophy, doctors of Music, doctors of Science, etc.

Dodo, an extinct bird of Mauritius which is known to have existed towards the end of the 17th century. It was a clumsy, short-legged bird, unable to fly, and gradually died out because of its inability to stand against the animals imported into the island by settlers. Some paintings of the Dodo, made by Dutch artists who actually saw it, give us a very fair idea of this curious bird.

Dog-days date from July 3rd to August 13th, covering a period of 40 days, when Sirius, or the dog-star, rises and sets with the sun. The ancient superstition was that this star exercised direct influence over the canine race.

Doge, the chief magistrate of the Venetian Republic, an office which existed from the 8th century down to 1797. The Doge was elected for life up to the 16th century, when the term of office was curtailed to two years.

Dogfish, a well-known genus of fishes of the shark family, but considerably smaller than that marine terror, seldom being more than 3 feet in length. They are numerous on the British coast, and are the great enemies of the fisheries.

Dog Idleness are necessary for all dogs over six months old, and the cost per dog is 7s. 6d., the licence dating from January 1st in each year. Dogs for tending sheep or cattle, or for leading blind persons, are exempt.

Dogmatics, the science which seeks to describe the various Christian doctrines. The term is also applied to the medical theories propounded by Hippocrates.

Dogs belong to the genus *Canis*, and descend probably from one or more wild species, such as the wolf, fox, jackal, etc. The domestic dog is usually grouped in six classifications: wolf-dogs—including the Borzoi, Eskimo, Newfoundland, St. Bernard, sheep-dog, etc.; cattle and watch-dogs—including the German pointer, the deerhound, the Danish dog, etc.; the greyhounds; the hounds—such as the staghound, bloodhound, foxhound, pointer, etc.; the curs—terriers, etc.; and the mastiff breeds—including the various mastiffs, the bull-dog, pug, etc. The sub-divisions of these classifications—which are by no means arbitrary—are numerous and fanciful, especially when what are called "toy-dogs" come under consideration. The dog does not reach full growth until two years old. It does not perspire, but cools heat through the tongue, which it hangs

out when hot. A litter of puppies is usually from six to eight, and the period of gestation is 63 days.

Dolly, a small napkin or table mat, used to place glasses or earthenware on; also the name of a species of woolen fabric.

Dolt, an old Dutch copper coin worth about a farthing; also the name of an old Scotch coin once current, worth from one-eighth to one-twelfth of a penny.

Dolce, a musical term indicating that the music has to be rendered softly and sweetly.

Doldrums, a nautical term applied to the portion of the ocean lying near the equator, where variations of weather from calm to squall are so frequent as to render navigation difficult.

Dole, an apportionment of money, food, or other charitable gifts, distributed according to the terms of the charity. In olden times doles were often associated with monasteries and churches, and some still survive. There was dole-bread and dole-beer.

Dolerite, a basaltic rock of coarse grain in which the components can be differentiated by the eye. Of the greenstone order.

Dollar, the unit of the monetary system of the United States and Canada, and coined in gold and silver. Dollars are in use in many other countries, especially in the Republics of South America, and the word is doubtless derived originally from the German thaler. The United States dollar of 100 cents is worth about 4s. 6d. in English money.

Dolls are puppets, mostly representing babies, but occasionally puppets of men and women, soldiers, sailors, etc. An immense trade is done in dolls. Dickens has a blind doll-maker (Caleb Plummer) in his *Cricket on the Hearth*, and he has also the "dolls' dressmaker" in *Our Mutual Friend*.

Dolomite, the name given to a limestone rock containing a large percentage of carbonite of magnesia in crystallised form.

Dolorese, a musical term denoting a sorrowful or plaintive style of playing.

Dolphin, an ocean mammal of the whale family, possessing a long and sharp snout, and of an extremely active disposition. Dolphins abound in most temperate seas, are from 6 to 8 feet long, and swim in shoals.

Dome, a large cupola, hemispherical in form, rising over the main building of a cathedral or other prominent structure. The finest existing dome, that of the Pantheon at Rome, is also the oldest, dating from the time of the Emperor Augustus. It is 143 feet high, and 142½ feet wide. The dome of St. Peter's, in the same city, stands 330 feet high, but its diameter is 3½ feet less than that of the Pantheon. The dome of the cathedral at Florence is 139 feet in diameter and 370 feet high; and the dimensions of St. Paul's, London, are 112 feet diameter and 215 feet high.

Dome Cover, the copper or brass covering to the dome of a locomotive engine, serving to prevent heat radiation.

Domesday Book is the famous register of the lands of England framed by order of William the Conqueror. According to Stowe, the name was derived from *Dominus dei*, the name of the place where the book was deposited in Winchester Cathedral; though by others it is connected with doom in the sense of judgment. Its compilation was determined upon in 1084, in order that William might compute what he considered to be due to him in the way of tax from his subjects. William sent into each county commissioners to make survey. They were to inquire the name of each place, the possessor, how many hides of land were in the manor, how many ploughs were in demesne, how many homagers, how many villeins, how many cottars, how many serving men, how many free tenants, how many tenants in socage; how much wood, meadow, and pasture; the number of mills and fish ponds; what had been added to or taken away from the place; what was the gross value at the time of Edward the Confessor. So minute was the survey that the Saxon chronicler of the time reports "there was not a single hide, nor one vintage of land, nor even, it is shame to tell, though it seemed no shame

to do, an ox, nor a cow, nor a swine was left that was not set down." The record, which did not take in Northumberland, Cumberland, Durham, and parts of Lancashire and Westmorland, was completed on November 15, 1086, and was comprised in two volumes—one a large folio, the other a quarto. The first is written on 384 double pages of vellum in one and the same hand, and in a small, but plain, character, each page having a double column. The quarto is written on 450 pages of vellum, but in a single column, and in a large, fair character. The original is preserved in the Public Record Office.

Dominant, in music, the fifth tone of the modern scale, and the receding tone in Gregorian scales.

Dominicans were the mendicant friars of the Middle Ages, the order being established in 1216 in Languedoc by Dominic de Guzman. They formed a powerful body, being next to the Franciscans, the most noted. The Jesuits overshadowed them, however, from the 16th century, though they are still to be found in many countries.

Don, originally a Spanish title of nobility, but now accorded to persons of the higher classes as a courtesy title. At the English universities the term is applied to college Fellows or authorities.

Donatists, an early Christian sect formed in Africa in the 4th century as a protest against the election of Cæcilius as Bishop of Carthage. They were headed by Donatus, and held that they only represented the true Church. Subjected to many persecutions and repressive acts, they continued to exist up to the 7th century, though the conciliatory measures of St. Augustine in 411 won many Donatists back to the orthodox fold.

Donative, a term in ecclesiastical law signifying a benefice given to a person without formal induction.

Donjon, the keep, or inner tower of a castle, and the strongest and most secure portion of the structure. This was the last refuge of the garrison, and there was usually a prison on the lower floor, hence the name *dungeon*.

Don Juan, one of the favourite libertine adventurers of literature, the drama, and opera. Byron took his "old friend Don Juan" for the hero of his longest poem, which remains a fragment in spite of its length. Mozart composed his great opera "Don Giovanni" around the subject.

Donkey, (See *Ass*.)

Don Quixote, the knight of the woeful countenance, the hero and title of Cervantes' classic story.

Donskoi, a coarse kind of Russian wool employed in the manufacture of certain kinds of worsted fabrics; first introduced into the Bradford trade about 1830.

Doonga, a rough kind of East Indian canoe, constructed from a single piece of wood, and carrying a square sail. Used chiefly in salt-collecting around the shallow waters of the Ganjies.

Dorado, a small southern constellation named by Bayer, appearing to the north of the Magellanic cloud.

Dorians, the name given to an early Greek race who traced their origin to Dorus, father of Eleus. They were at one time very powerful, and held the southern and western parts of Peloponnesus.

Dormer, the name of a special kind of window projecting from a sloping roof, and of vertical form. Such windows were common to the architecture of the Netherlands, northern France, and Belgium from the 14th century, and form picturesque features of general architecture.

Dormouse, a small, squirrel-like rodent widely distributed throughout Europe, Asia, and living mainly on fruit and nuts. It is of nocturnal habits, and sleeps through the winter.

Dort, *Synod of*, was convened in 1618-19, and resulted in the adoption of Calvinism as the Reformed religion, and the condemnation of the teachings of Arminius.

Dory, *John*, a species of mackerel abounding in European seas, and a good table fish. The name comes from the French *Jaune Dore*, yellow and gold.

Dote, a French term indicating the property which a wife brings to her husband on marriage, and is usually settled on the woman, being her separate

property, though the income from it may go towards the general household expenses.

Dottarel, a bird of the plover family, appearing in the spring and autumn in large numbers in the higher latitudes of Europe, and common in the mountain regions of Scotland.

Double-entendre, a corruption of the French phrase "double-entente," and used in English to indicate a word or sentence of indelicate double meaning.

Doublet, a body garment worn by men from the 15th to the 17th century; at some periods with skirts and belt, at others padded at the hips and in the sleeves. In their later form, under the Stuarts, doublets were made without sleeves and formed a sort of vest.

Dower, Treaty of, the secret compact entered into between Charles II. and Louis XIV., whereby Charles practically made himself the tool of France for an annual allowance of £200,000.

Dower, the share allowed by law to a widow out of the real estate of her deceased husband, if he dies without having made other disposition in her favour. There are many ways of barring dower, and though at common law the widow's dower amounts to one-third of the husband's real property, it is seldom that it is left open for such a claim to be substantiated in its entirety.

Drachm (or Drachma), the name of the chief silver coin used by the ancient Greeks and worth about 10d. of English money. It is also—in the first form—a term used in English apothecaries' weight, representing the eighth part of an ounce, and in avoirdupois weight equaling the sixteenth part of an ounce.

Draco, the name of one of the northern constellations, the Dragon, but difficult to observe because of its containing no star of the first magnitude.

Dragoman, an oriental term used to designate a guide or interpreter. In some regions it is not considered safe to travel without an attendant of this kind. They often assume larger responsibilities, however, and contract for the organisation of caravans, and the carrying out of tours.

Dragon, a fabulous monster common to mythologies and fairy lore in all countries, and generally represented as a sort of winged reptile, with fiery eyes and breath of flame. A dragon guarded the garden of the Hesperides; in the New Testament there is mention of the "dragon, that old serpent, which is the devil"; St. George, England's patron saint, is supposed to have overcome the dragon; and mediæval legend abounds in dragons. In heraldry it has also a conspicuous place; and in China is the imperial emblem.

Dragonade, the term given to the series of persecutions of Huguenots in France in the reign of Louis XIV., dragons being chiefly employed in the work. Since then the term has been used in reference to any onslaught on the people by soldiers.

Dragonet, the name of a genus of fishes of the *Lefistius* family, beautifully coloured, and about a foot in length. They are common on the British coast and in the Mediterranean.

Dragon Fly, the common name of a well-known class of insects having two pairs of membranous wings, and often of very brilliant colours. They are swift of flight and may be seen hovering over sheets of water in the sunshine all through the summer.

Dragon's Blood, a dark red resinous substance obtained from the fruit of a Malay palm, and possessing medicinal virtues which are highly valued for dental and other purposes. It is also employed as a colouring material.

Dragoons, a mounted military force dating from the 17th century, and at first serving alternately as infantry and cavalry as needed. They are now classed as heavy or light dragoons, and are among our regular cavalry troops.

Drama, a composition in verse, or prose, or both, with characters and a succession of scenes, representing some story of human or supernatural action. The plot and its characters give us the first definite form of the drama; then we have the virile developments shown in the Greek drama, with its two distinctive branches, Tragedy and Comedy. After

the classic days of Greece and Rome, the drama lost much of its power, and in the miracle plays and "moralities" of the Middle Ages we find little of real dramatic force. In England there was the splendid dramatic revival which gave us Shakespeare, Marlowe, and the other famous Elizabethans. The subsequent distinct English dramatic periods are those of the Restoration noted for its licentiousness, and the Georgian, in which Goldsmith, Colman, Sheridan, and other dramatists took part. In more recent times the drama has undergone notable developments, passing from the poetic drama to opera bouffe, from opera bouffe to Gilbert-Sullivan opera and musical comedy, and so on through many ramifications, with a later tendency to problem and sexual subjects which it is difficult to characterise.

Drammatic Unities, as prescribed in ancient times, comprise Time, Place, and Action.

Draughts, a game played with dark and light pieces on a chequered board. See *Fearr's Dictionary of Sports and Pastimes*.

Drawbridge, a bridge that can be lifted up so that no passage can be made across it. It was a usual feature of a fortified castle in the Middle Ages, and was raised or lowered by chains and levers. It spanned the fosse, and on the approach of an attacking party was raised and formed a special barricade to the gate. Modern drawbridges are such as are raised at the gallow of the passage of boats up and down a river or estuary.

Dreams are ideas and images that pass through the mind during sleep. They are sometimes the outcome of waking thought and action, but appear in such a distorted and fantastic form as to have little semblance to what is real. Still, no matter how strange the figures and incidents of a dream may be, one is never surprised thereat. Many superstitions have gathered round dreams, especially in older times, when they were submitted to professors of the occult for interpretation. Dream books are published even to-day, professing to show what dreaming of certain things portends. There is the old proverb that "dreams go by contraries," which is sufficient for many people. "Nightmare" is a kind of dream usually traceable to indigestion, and often assumes frightful forms.

Dredging machine, an apparatus employed in collecting mud and silt from the bottoms of harbours, rivers, canals, etc. They are usually flat-bottomed, carrying a crane, and an endless chain of buckets, which descend into the water, collect the mud, etc., bring it up, and discharge it into the flat alongside the machine. Steam dredges, of which there are many forms, are now generally in use.

Dress came, we are told, into vogue in the Garden of Eden, though it must be admitted that it did not make much of a show at that early period. Its first object was utility. Gradually a desire to make it decorative sprang up, and fashions began to be set. From that time dress has risen in its course through the ages, with many variations and eccentricities, according to climate, whim, and need, and at the present time is more diversified and more generally costly than ever.

Dripstone, a projecting stone or moulding over a doorway, for carrying off dripping rainwater.

Drohaky, a light, four-wheeled, topless vehicle, much used in Russia.

Dross, the name generally applied to the refuse of molten metal, composed chiefly of slag, scales, and cinders.

Drought, a period of dry weather, is a normal and recurring condition in many warm climates, and is frequently provided against by irrigation. In Great Britain droughts do not often occur. Even in a dry summer a drought of a month would be deemed unusual. In 1822, there was a drought in England of 40 days, the longest on record.

Druggat, a cheap kind of carpeting made of mixed materials, but usually containing a fair proportion of woolen fibre. It has often a printed design on the upper surface, but is made also sometimes of one colour. The term is likewise applied to a protective covering used for carpets, etc.

Druggist, a dealer in drugs; the business is usually nowadays combined with that of an apothecary, who compounds and prepares the drugs he sells.

Druids were priests of the old Celtic races of Gaul, Britain, and Ireland. Their religion was made up of nature worship, symbolism, and a belief in special deities. The Druids were greatly venerated by the people, and, in addition to matters of religion, they were entrusted with the administration of justice. They regarded the oak as the symbol of the Supreme Being, and their rites were usually performed in oak groves, and the mistletoe that grew on the oak was held to represent man's dependence upon God. Human sacrifices were part of their religion, and the serpent was one of their objects of worship. At Stonehenge in Wiltshire, Avebury, Chipping Norton, Keswick, and other places, the circles of huge stones which have been preserved from primitive times are regarded as Druidical remains, but this rests upon tradition rather than proof.

Drum, a percussive musical instrument, consisting of a hollow circular body of wood or metal, the ends of which are closed in with tightly-stretched pieces of membrane, which emit more or less vibrant sounds when struck with sticks. Drums are usually of three kinds—the *bass drum*, held horizontally and beaten at both ends; the *side drum*, slung to the side, and played on the uppermost end with a pair of wooden drum-sticks; and the *kettle-drum*, the shell of which is of copper or brass, and the head formed of parchment. Kettle-drums are mainly used in cavalry bands in pairs.

Drupa is the general scientific term for stone fruit. The stone forms the inner part of the fruit, and encloses a seed or kernel, the latter being liberated after setting in the ground by the decomposition of the shell.

Drury Lane Theatre is the oldest London play-house. There was a theatre of the name during the whole of the Stuart period. This was the house that was destroyed by fire in 1697. The next theatre on the site was built by Wren. This was also burned down in 1809. The present house dates from 1812. Sherridan was its manager for a long time.

Druses, a half-Christianised, Syrian religious sect living among the mountains of Lebanon, fierce and warlike in nature. A great massacre of Druses by Maronites and Mahomedans occurred in 1860.

Dryocopus, a large blackbird of the woodpecker family, having a scarlet crest, and inhabiting Northern Europe.

Dry-rot is caused in timber by a fungoid growth, and occurs chiefly in damp situations. The most effective treatment is saturation with creosote. Dry wood always escapes dry-rot.

Dualism is a term used both in religion and in philosophy. In religion it involves the doctrine of two distinct principles, one good, the other evil, as the controlling influences; in philosophy it opposes materialism and idealism, and insists that spirit and matter are separate substances.

Dublin University was founded by Queen Elizabeth in 1592, as the College of the Holy and Undivided Trinity. There are over 800 undergraduates, and about 200 graduates in the professional schools.

Ducat, a coin formerly widely current on the Continent, first coined in Apulia in the 12th century. A gold ducat was worth about 9s. of our money, and a silver ducat half that sum.

Ducatoon, a large silver coin once current in the republic of Venice, and worth about 6s. English.

Duchess, the wife or widow of a duke, or the lady who has in her own right control or sovereignty in a duchy.

Duck, a bird of the Anasidae family, widespread and of many species, the Mallard or Wild Duck being regarded as the common ancestor. See *Pears' Dictionary of Poultry*.

Duck-Bill, a strange fur-covered mammal inhabiting Australia and Tasmania, possessing a bill like a duck and a body resembling that of an otter. Called also the duck-mole and the duck-billed platypus.

Duck-Hawk, the common name of the moor-buzzard. In America the peregrine falcon bears this name.

Ducking-stool or Cucking-Stool, an old English instrument of punishment, consisting of a chair suspended by a pole over a sheet of water. It was used for 'common scolds,' the virago being tied in the chair and dipped in the water. One was used at Leominster as recently as 1809. The Domesday Book has a reference to the ducking-stone.

Ductility is a property possessed by most metals which renders them capable of being stretched without breaking. Gold is the most, and lead the least, ductile of metals, the order being gold, silver, platinum, iron, copper, palladium, aluminium, zinc, tin, lead. In animated nature the spider and the silkworm, with their elastic secretions, are the most noted examples of ductility.

Duelling had its origin in France in the so-called days of chivalry, and lingers there still in a more or less serious fashion. It existed in England through mediæval times, and down to the days of George III. In the German army there are frequent duels of a kind, but in no country at the present time are such encounters indulged in, except on rare occasions, with intent to kill. In Great Britain and America duels are now looked upon as childish or foolish methods of settling disputes, and are an offence against the law. The Duke of Wellington fought a duel with Lord Winchester in 1809. Before then, Castlereagh, Pitt, Sheridan, Fox and Canning had all taken part in duels. A duel, it will be remembered, is a chief incident in "The Rivals." An ancestor of Lord Byron's fought and killed his neighbour, Mr. Chaworth, in a duel in a room of Newstead Abbey.

Duet, a musical composition for two voices or two players, and, in the case of the pianoforte, can be performed on one instrument.

Duke, the highest rank in the British peerage next to that of a royal prince. Edward I., Black Prince, was the first English Duke, being created Duke of Cornwall in 1337, since which time all Princes of Wales have held that title.

Dukeries, a range of English woodland and park country, mainly in Nottinghamshire, comprising the adjacent duchies of several English dukes and nobles. The Dukeries stretches in the vicinage of Sherwood Forest, and the principal estates included are those of Welbeck Abbey, Clumber Park, Worsnop Manor, and Thoresby Hall.

Dukhobortal, a Russian sect founded in the 18th century by Pioncepe Loupink, and still numbering many thousand followers. They deny the divinity of Christ, reject rites, ceremonies and images, and give a mystical interpretation to the Bible. The sect was banished to the Caucasus in 1847, and in later years the Russian authorities have dealt severely with them. Some 7,000 of them settled in Canada in 1899.

Dulciana, an ancient stringed musical instrument. The strings or wires, which are tuned to scale and consist of from two to three octaves, are stretched across a wooden box, and are played upon with light cork-headed hammers.

Dulse, a crimson-coloured seaweed, eaten as food in Scotland and New England, and in Kamschatka utilised for making a fermented liquor.

Duma, the Russian National Parliament, started on popular lines in 1906, and reconstructed in 1907.

Dunclad, Pope's famous satire in verse, in which he reviled the attacks of his enemies, and denounced the critics and poetsasters with scathing effect.

Dunes are hills of loose sand which form on the sea-coasts. In some instances they have aggregated at the mouth of an estuary, and, remaining fixed, have been the cause of the estuary being blocked against the tide.

Duodecimal, a system of arithmetic enabling the number of feet or inches in a rectangular surface to be worked out by a calculation of twelfths. It is also called "cross multiplication."

Duodecimo, a sheet of paper folded into twelve leaves, written "12mo."

Duodenum, the first portion of the small intestine, connecting with the stomach, and receiving the hepatic and pancreatic secretions.

Dura Mater, the anatomical name for the outer membrane of the brain and spinal cord.

Duramen, the hardened inner part of the wood of large trees.

Durbars, an Indian official reception, held by either the King-Emperor, the Viceroy or a native Prince. The most important durbars of recent times have been those held in 1877 at Delhi when Queen Victoria was proclaimed Empress of India, the one held in 1903, when King Edward VII. was proclaimed, and that of 1912, the most magnificent of all, when the coronation of his present Majesty was celebrated with great splendour, and the removal of the capital from Calcutta to Delhi, and other great concessions were proclaimed.

Durham University, founded in 1827, comprises University College, Bishop Hatfield's Hall, Durham College of Medicine and the Durham College of Science, Newcastle.

Durian, a tall tree common in the Malay Peninsula, cultivated for its edible pulposus fruit, which is largely eaten by the natives. It possesses a fœtid odour, and is sometimes in consequence called the "Civet durian."

Dwarfs are persons of very diminutive size, of which many notable examples are recorded in history. They are generally regarded as curiosities, and either find their way into the service of kings — nobles, or are exhibited for profit. Stanley reported a tribe of dwarfs, in Central Africa. Geoffrey Hudson, Charles I's dwarf, was only 18 inches high at 30 years old. The smallest of modern dwarfs were "General Mite," 21 inches, and "Tom Thumb," 31 inches.

Dyaks, the native race of Borneo.

Dye-stuffs are of numerous kinds, and have been greatly extended in modern times by chemical discoveries. They include cochineal, indigo, logwood, madder, fustic, and the various aniline matters now forming a great feature of dyeing.

Dyke, the term applied to masses of igneous rock which have flowed into grooves of strata or become infused therewith; the word also signifies, in alternative usage, a sea wall and an open drain.

Dynagraph, a machine for recording the condition of a railway line, the speed of a train, and the amount of coal and water used on a journey.

Dynamics deals with natural forces, either in motion or at rest, describing their positions, velocities, and constitution.

Dynamism, Leibnitz's doctrine that all substances in Nature involve force.

Dynamite, a powerful explosive whose chief element is nitroglycerine. It was discovered by Nobel in 1867, and has a disruptive force of about eight times that of gunpowder.

Dynamo, an electric machine consisting of electromagnets, between the poles of which is an armature of coils of insulated copper wire, which is made to revolve by mechanical power, thus producing the electric current.

Dynasty, a succession of monarchs of the same family, as the Carolingian dynasty, the Bourbon dynasty, the Plantagenet dynasty, the Hanoverian dynasty, etc.

Dytiscus, the name of a large and common water-beetle, a voracious feeder on larvae, tadpoles, and a typical amphibian.

Dzigatal, the name of the wild ass of Asia, referred to in the book of Job, and found in herds on the steppes of Central Asia; related to the onager.

Eagle, a large diurnal, raptorial bird of the Falconidae family, having some nine or ten species, including the Golden, the Russian, the Spotted, the Imperial, and the Bald Eagles. Eagles are fairly common in Europe, Asia, and Africa, but only the Golden Eagle is found in America.

Eagle, a ten-dollar gold coin of the United States. There is also a double-eagle of 20 dollars.

Eagle's Wood, a name given to *Alseylon gallochum*, a fragrant Asiatic wood yielding a resinous gum from which certain medicaments are made. It is also used for incense, and a cordial is concocted from it.

Ear, the organ of hearing, comprises in mammals, the *external ear*, containing the pinna and auditory meatus; the *middle ear*, containing the drum or tympanum; and the *internal ear*, through which the sound vibrations are transmitted to the brain.

Ear-ring, a very ancient form of personal adornment worn by both sexes in Oriental nations. In Anglo-Saxon times ear-rings were worn in Britain, but from the 10th to the 15th century were out of fashion. In Elizabethan days they were revived, and have since continued to be used, more or less. In early Victorian days they were common, then they fell out of fashion again; but there has been a revival of them to some extent in recent years.

Earl, a British title of nobility of the third rank, duke and marquis coming first and second. The title dates from Saxon times, and until 1337 ranked highest in our peerage.

Earl-Marshal, an office hereditary in the family of the Dukes of Norfolk, the "premier earls of England," whose duty is to direct all great ceremonies of State, coronations, and so forth. His seat is at the College of Arms.

Early English Architecture is the pointed style, with long lancet-headed windows, and came between the Norman and the Decorated periods. It continued through the 12th and 13th centuries.

Earth, our habitable globe, is the third of the planets of the solar system in order from the Sun, and revolves upon its axis in one sidereal day, the whole earth revolving around the sun in an ellipse in one year. The distance of the earth from the sun is 93,000,000 miles. The shape of the earth is that of an oblate spheroid, its diameter measuring 7,926 miles and 1,041 yards, and 7,899 statute miles and 1,023 yards, respectively. Two-thirds of the earth's surface is covered with water. It has only one satellite, the moon.

Earthenware. The term comprises objects or utensils composed of non-translucent, baked or fired clay, and may be either unglazed or enamelled. The word is frequently employed to designate only the coarser kinds of pottery.

Earth-Nut is a class of plant of low growth, with a bulbous edible root, slightly aromatic.

Earthquake, a violent disturbance of the earth's action. Earthquakes are frequent in hot countries, more particularly in South America, but they occasionally occur in colder regions, though only in a mild form, and are not unknown in England. An earthquake shock has an undulating motion, varying in duration, sometimes lasting only a few seconds, at other times continuing in a series of shocks for a considerable time. There was a destructive earthquake in San Francisco in 1906. The most serious earthquake of modern times was that of Lisbon in 1755, in which 50,000 people lost their lives. Tropical and sub-tropical countries are rarely long free from seismic disturbance, but British possessions have been fortunate in this respect on the whole, though in January, 1907, Jamaica suffered severely, and particularly the capital, Kingston.

Earthworm, of which there are several species, has a cylindrical body, tapering at both ends, and segmented into rings. It moves by contraction of its rings, aided by retractive bristles; is eyeless, but has a mouth, gullet and stomach. Earthworms exist in immense numbers, and perform an important part in the scheme of nature by loosening the soil and rendering it more amenable to tillage. They also form a valuable food for birds and many mammals, and are unequalled as bait for certain kinds of fish.

Earwig, a genus of insects of the cockroach family, possessing two pairs of wings, and anal forceps. It is of nocturnal habits, lives on vegetable matter, and hides by day under stones or bark. The old belief that it deliberately creeps into people's ears is altogether unfounded.

Easement, a legal term applied to a privilege enjoyed by any one over another's property, the most familiar example being the right of way.

Easter, the annual Church festival in commemoration of the resurrection of Christ. The name is said to be derived from Eostre, the Anglo-Saxon goddess of Spring. The date of Easter Day is fixed by what is called the "calendar moon," and cannot fall earlier than March 22 or later than April 25.

Eastern Question, a term applied to the problems connected with the government of the provinces or states on the south-east of the Turkish Empire in Europe. It was this question that led to the Crimean War, and is always the subject of more or less anxiety.

East India Company was incorporated by Elizabeth I. in 1600. Its first capital was £72,000, but its earlier ventures were unsuccessful. By 1623, however, the company were able to get a footing in India, obtained a charter of privileges from the Great Mogul, and set up a factory at Surat. Under Charles I. the company suffered severe losses and were compelled to open a subscription for new stock, although Madras and St. Helena had been added to their possessions. During the Commonwealth the company's charter was annulled, but renewed three years later, when a new stock of £370,000 was raised. From that time the fortunes of the company improved. In 1685, however, when the infant Catherine's dowry when she was married to Charles II., came under the company's influence, and soon developed into an important trading port. Complications arose later on. France sought to gain power in India, and a fierce struggle for supremacy ensued, but the splendid achievements of Clive gained the victory for England, and after 1765 the company became possessed of the revenues of Bengal, Behar, and Orissa, and thenceforward British dominion in India remained undisputed except by native princes. In 1772 a governing constitution was formed, and Warren Hastings was appointed the first Governor-General. In 1781 a new charter was granted, and in 1784 Pitt established a Board of Control of the India Company. A great increase of trade resulted, and this rule continued down to 1858, when, as a result of the mutiny, the Crown assumed the sovereignty and functions of government, whereby the commercial significance of this vast possession was materially strengthened. From that time the office of Governor-General ceased, and the government is now controlled by a Viceroy and Council. The old company still exists for the purpose of receiving payment of capital and dividends, but has no governing power.

Eastward Position, a position assumed at the altar by an officiating clergyman at the communion service and formally declared illegal in 1870.

Eau de Cologne, a well-known distilled perfume originally manufactured at Cologne in the 18th century by Johann Maria Fanna, an Italian, and now produced in large quantities both in Cologne and other places.

Eau de Luce, an antispasmodic stimulant composed of certain parts of mastic, oil of amber, alcohol, oil of lavender, and aqua ammonia.

Eavesdropper, one who secretly listens to the private conversation of others. Offenders of this kind were often severely punished in olden times.

Eblionites were a religious party of Judaizing Christians of some prominence from the 2nd to the 4th century. They contended for the authority of the Mosaic law, denied the divinity of Christ, and opposed the teachings of Paul.

Eblonine, a crystalline spirit procured from crude pyroxyllic spirit; it is volatile, and called alternatively pyroxanthine.

Ebony, a name applied to various hard, black woods, the best of which are grown in Mauritius and Ceylon. There are also Indian and American varieties. Only the inner portions, the heart-wood, of the trees are of the necessary hardness and blackness. Ebony is largely used in ornamental cabinet work, for dial-plates, cane, etc.

Ebalium, the scientific name of the squirting cucumber, so named from the fact that when ripe it

breaks from the stalk and ejects its seeds and juice from the hole made by the breakage.

Ecc Homo ("Behold the Man!"), used in reference to the pictures and sculptures representing Christ crowned with thorns.

Ecclesiastes, a book of the Old Testament, the word signifying "the preacher." Supposed to contain the reflections of Solomon, though many critics dissent from this view.

Ecclesiastical Commissioners are an incorporated body, existing since 1836, whose duties are to administer ecclesiastical revenues and manage ecclesiastical property generally. The body consists of the two English Archbishops, all the Bishops, the Lord Chancellor, and principal officers of State, the Deans of Canterbury, St. Paul's, and Westminster, the Lord Chief Justice, and nine lay Commissioners. Since 1840 the Commissioners have augmented or endowed over 7,500 benefices, and effected a total increase of incomes of benefices of over a million and a quarter sterling per annum. In 1907 a Pension Fund scheme for poor and infirm clergy was established by the Commissioners.

Ecclesiastical Courts, dealing exclusively with church affairs, are those of the Archdeacons, the Bishops, and the Metropolitan (York or Canterbury), with the Judicial Committee of the Privy Council as the final court of appeal.

Ecclesiasticus, the title of one of the books of the Apocrypha, dating from about 180 B.C. Its alternative title is "The Wisdom of Jesus, the Son of Sirach."

Echidna, an animal of the anteater family, inhabiting Australia and Tasmania. It lives on insects, burrows, lays eggs, and in structure is nearly allied to birds. Owing to its prickly spines it is commonly called the Porcupine Anteater.

Echinodermata, the generic term of the invertebrate animals of the sea-urchin and starfish class.

Echo is a sound repetition or repercussion caused by some obstructing object, which throws the sound waves back to their starting point. Woods, rocks, defiles, valleys, mountains, or walls all act as echo-producers under favouring conditions.

Electiones, a philosophical system built up of selected parts of other philosophies. First used by early Christian writers.

Eelmaster, a genus of starfishes, including the *E. spinosus* and the *E. sentus*, with sheathed spines at the angles.

Eclipse, an obscuration of the light of the sun, moon, or other heavenly body by the passing of another body either between it and the eye or between it and the source of its light. The sun is eclipsed by the moon intervening between it and the earth; the moon by the earth passing between it and the sun. Eclipses vary in number from year to year, though always recurring in the same order over a period of 184 years.

Ecliptic, the circle describing the course of the earth round the sun. Its position at a given date is styled the *fixed ecliptic*; the position of the *mean ecliptic* in relation to the equinox is the *mean ecliptic*; and *true ecliptic* is the mean ecliptic as affected by inclination. *Obliquity of the ecliptic* signifies the angle of inclination of the ecliptic of the equinox.

Ecumenical Council, a specially summoned consultative gathering of the heads of the Roman Catholic Church, when important questions of church doctrine and polity are decided. *Papal infallibility* was the authoritative pronouncement of the last great Ecumenical Council held in 1870.

Edaphodon, a genus of Chimæroid fossil fishes, found from the Cretaceous to the Eocene rocks.

Edda, the book of the mythological lore of Scandinavia, written by Snorri Sturluson in the 13th century.

Eddystone Lighthouse stands on a group of rocks about nine miles from the Cornish coast and fourteen from Plymouth. The present structure is the fourth that has occupied this dangerous position. The first was of wood, completed by Winstanley in 1700, but three years later washed away, its architect with it. In 1709 a second and stronger

wood lighthouse was built by Rudyard. This lasted until 1755, when it was destroyed by fire. Smeaton built the third lighthouse, of granite and Portland stone, on the model of an oak trunk, and this, which was finished in 1759, withstood the storm and tempest for over a hundred years, being superseded by the present building, erected in 1879-82 by Sir James Douglas. It is wholly of granite. Its light can be seen over seventeen miles, and in foggy weather it sounds a two-ton bell.

Edelweiss, a white perennial flower of the daisy order, common in Alpine regions.

Edentata, the name given to an order of mammals which are either entirely toothless or without incisors. Sloths, ant-eaters, and armadillos belong to this order.

Edible Nests are such as are built by certain birds of the Swift family in sunless caves in Madagascar, Ceylon, New Guinea, and other places. These nests are formed of a jelly-like mucus secreted from a salivary gland, and in China fetch a high price, as much as the equivalent of £7 or £8 a pound being paid for good specimens. Soups are made of them. They run about 50 nests to the pound. It is only the first nests that are of value. When these have been taken away the birds build a commoner nest composed in great part of grass, etc.

Edict of Nantes. (See *Nantes*, *Edict of*.)

"Edinburgh Review", the great Whig quarterly, established in 1802, edited by Jeffrey, and numbering among its contributors Lord Brougham, Sydney Smith, etc., and, later on, Macaulay.

Edinburgh University, founded 1582, and now one of the leading medical centres of the kingdom. The annual value of its fellowships, bursaries, etc., is over £18,000. About 3,000 students matriculate yearly. Conjointly with St. Andrew's, it returns a member to Parliament.

Education in the United Kingdom has only been compulsory since 1870, when Board Schools were established in all parts of the country. The elementary school age was fixed from 5 to 14, with exemption for proficiency after 11. Under the Education Act of 1870, there grew up in England and Wales a system including about 2,500 schools. Since the passing of the Education Act of 1880 the Board of Education has been the educational authority. In 1902 a new Education Act was passed, by which Board Schools were abolished and new education authorities were set up in England and Wales, consisting of county, borough, and urban district councils. No denominational formulary was to be taught in the Council's schools, except that in cases of schools not provided by the local education authority religious instruction shall be provided in accordance with the provisions of the original trust deed (if any). There are in England and Wales nearly 14,000 non-provided and nearly 7,000 provided Council schools, affording accommodation for over 7,000,000 scholars. A Welsh Department of the Education Board was established in 1907. In Scotland over 800,000 scholars are on the elementary and higher grade schools register; and in Ireland there are over 8,500 elementary schools, with an aggregate of over 700,000 pupils on the register. The Meteorological and Industrial Schools are also performing good work. For the higher education of women there are several Training Colleges, as well as the special University advantages. An improved Education measure forms part of the Liberal programme.

Eels are soft-finned, serpentine fishes almost without scales, abundant in European waters, salt and fresh. They do not generally exceed 3 feet in length, the females being larger than the males. Young female eels make their way from salt to fresh water, and when full-grown return to the sea for breeding purposes. The Conger (marine) eel grows to more than twice the size of the fresh-water eel. The Electric eel of South America is a variety of great interest, possessing the power of emitting electric shocks.

Eftandil, a Turkish courtesy title, usually accorded to the official and professional class, and equivalent to the modern English use of *esquire*.

Egg-plant, a plant cultivated for its ovate fruit.

varying in colour from dark purple to white. In great esteem as a vegetable in America.

Egre, a bird of the heron family, of pure white plumage, famed for its beautiful silky tufts which appear in the breeding season. There are two varieties, the larger kind being found in Eastern Europe, North Africa, and America, the smaller being confined to Eastern Europe and Asia.

Egyptian Vulture, a numerous species common in Eastern countries, and valuable for the scavenging duties it performs. It is considered a moral offence to kill one of these birds.

Eider Duck, a large duck of which there are five species. It is an inhabitant of northern latitudes, and supplies the beautiful soft down called "eider down." These birds line their nests with down which they pluck from their breasts, and it is this that is so much prized. Down plucked from an eider duck is of much less value. In certain parts of Norway and Scotland the haunts of eider ducks are preserved. Eider down is so elastic that a pound or two of it will fill an ordinary bed covering.

Eiffel Tower, built in Paris in 1886-89; is 985 feet high, and cost £200,000.

Eikon Basilike (Royal Image), the title of a work issued in 1644, supposed to have been written by Charles I. in support of kingly divinity, and replied to by Milton in the same year with his *Lichfield Baites* (image breaker).

Eire (or *Eyre*), an old legal term still in use in Scotland in connection with the circuit of judges. Justices in eyre were judges journeying from assize to assize for the purpose of holding trials.

Eisteddfod (a sitting) was originally a congress of Welsh bards and minstrels, and dates from before the 12th century. These assemblies were discontinued for a long period, but resumed in 1870, and have been held yearly since, each lasting three or four days. Their object is to foster the Welsh patriotic spirit, and they are devoted to orations and competitions in poetry, singing, and harp-playing, prizes being awarded to the successful contestants. The proceedings are partly in Welsh and partly in English. The festival was held in the Albert Hall, London, in 1909.

Eland, the largest species of antelope, a native of Africa; has large pointed horns, stands 6 feet high at the withers, and weighs several hundred pounds. It is a fleshy animal and much valued as food.

Elasticity implies a power of expansion by strain, and a reversion to the original form when the strain is withdrawn. Perfect elasticity is presented by gases and liquids, while solid bodies vary in elasticity according to their composition. The greatest amount of elasticity is possessed by indiarubber, tempered steel, ivory, glass, etc., the least by lead, clay, and fats.

Elateridae, a family of beetles of a numerous species, with short legs and indented antennae. When placed on their backs they are able to easily right themselves, by an action of the body which causes an audible snap.

Elder, a genus of small trees of the *Sambucus* family, with pinnate leaves, and bearing clusters of small black-purple berries. The black elder is the best known. It is common in most parts of Europe, and thrives in Britain. A wine of some value is made from its berries, and the juice is employed as an aperient.

El Dorado, a "golden land," was an idea that found much favour in the days of the early Spanish explorers. It was firmly believed that somewhere on the South American continent there was a country abounding in gold and precious stones, and many were the expeditions that were fitted out to effect its discovery. Amongst others, Sir Walter Raleigh went forth on this illusive quest. The term is still used in regard to any place of rich promise.

Eldritch, a Scottish term, signifying "frightful"; as "eldritch squeal."

Election, a term applied to a school of philosophers established at Elea by Xenophanes, who held that "the One, or Absolute, alone is real and eternal."

Meacampane, a perennial plant found in damp meadows in England, and bearing a large yellow flower. The root possesses certain medicinal properties, and when dried is in popular repute as an astringent and tonic.

Meloeon, in theology, is the theory that God elects to grant eternal life and heavenly favour to a certain number of human beings, and passes over the rest. Calvinism supports the theory as absolute, Arminianism makes it conditional.

Meloeon, in astronomy, one of the Pleiades, also an asteroid, discovered in 1873 by Peters.

Meloeon is the name given to a class of phenomena of attraction and repulsion, the true nature of which is still incompletely understood. It is customary to separate it into two divisions—frictional electricity and voltaic or current electricity. It was first discovered in its frictional form in the 6th century B.C. by rubbing amber with silk, thus creating a power of attraction. Further experiments resulted in obtaining frictional electricity by using other substances in the same way. Other means of exciting electricity were also found later. In the utilisation of frictional electricity, its distribution over the surface of a conductor has to be provided for, and electrical machines are employed for developing quantities of electricity. In voltaic or current electricity, the electricity is produced by a battery or by coil of wire or dynamo machine.

Meloeon Light is light produced by electricity, and is of two kinds, the arc-light and the incandescent light. The first is produced when a strong current passes between two carbon electrodes, first brought together, then slightly separated, leaving the current to continue, but setting up a resistance that causes the carbon points and the air between them to assume a white heat which gives forth an intense light, thus completing what is called the electric arc. The incandescent light is obtained by passing the current through a thin metallic wire or other strong resisting substance until it heats to the point of incandescence.

Meloeon Power, although largely utilised in manufacturing-plants and in some collieries, is still in its infancy. Modern industry and even social life are coming more and more to be dependent on the new source of power. The limitations at present placed upon its further extension are so imposed because of our lack of experience. For the moment, we have come to the limit of the voltage upon which the distance that power can be transmitted depends. The highest in use in any successful commercial operation so far is 55,000 volts. For this limit there are four reasons; the difficulty in maintaining perfect insulation; in securing protection from lightning discharges, etc.; loss due to brush discharges from high-tension conductors; and deterioration of the high-tension conductors. The solution of these problems can only be effected by experience.

Meloeon Telegraph may be said to date from 1836, when Sir Charles Wheatstone and his co-inventor Cooke introduced their Single Needle instrument, which was soon followed by the Double Needle apparatus. Morse, in 1837, invented his famous recording instrument. The first electric cable was between Dover and France, and was laid in 1850. The first Atlantic cable was laid in 1858, and the second in 1865. It was in 1869 that the first Marconi wireless telegraph messages were sent between England and France.

Meloeon Tramways were first introduced in this country in 1783, from Portsmouth to the Gosport Causeway, but it was not until they had been largely adopted and improved in America that they began to be more generally installed in the United Kingdom. They are now established in nearly every town of importance, and there is a total route length of considerably over four thousand miles of electric tramways and light surface railways in Great Britain. The introduction of motor buses has had the effect of considerably arresting the development of tramways.

Meloeon is the condition established when an electric current passes through a conducting liquid, between electrodes, connected with the poles of a

battery, resulting in the decomposition and separation of the liquid, if a compound. Water thus becomes decomposed into hydrogen and oxygen.

Meloeonmeter, an instrument for measuring the amount of an electric discharge.

Meloeon Theory asserts that matter when analysed into its ultimate components consists of electricity, and that electricity itself is composed of atoms. Many leading physicists have accepted the theory, for which it is claimed that it forms a working hypothesis capable of accounting for all the known phenomena of electricity.

Meloeon, an instrument invented by Volta for obtaining static electricity by induction, and consisting of a disc of resin connected with a disc of polished metal. On the resin disc being negatively electrified by rubbing with catkin or warm, dry flannel, the metal plate is placed upon it, causing the plate to be positively charged on the lower surface and negatively on the upper. At this point, if the disc be touched with the finger, the negative electricity is discharged into the earth, leaving the disc charged positively.

Meloeonplating is the process of coating metals or other substances with a metallic film, applied in a bath of the solution of the coating material, by the action of an electric current.

Meloeon, a kind of verse designated by the ancient Greek poets, afterwards adopted by the Romans, and frequently used in modern times, for compositions of a mournful character. An elegiac consists of distichs, "each of a dactylic hexameter and a pentameter." Among the Roman elegiac poets, Catullus, Tibullus, and Ovid were noted.

Meloeon, in the popular interpretation, comprises earth, air, fire and water. In chemistry, an element is a substance in the simplest form to which it has been reduced, and at the present time there are about eighty of these elements demonstrable. They are classed as metallic and non-metallic.

Meloeon, the name given to a venous exudation obtained from various trees of the Burseraceae order found in most tropical regions. Valuable in pharmacy, also for varnishes, and for chewing.

Meloeon, a proboscidean mammal of which only two species exist—the Asiatic and the African elephant. The first inhabits India, the second Africa. No other animals possess a trunk. Both males and females have large ivory tusks of considerable commercial value. A full-sized elephant weighs about 7,000 lbs. and stands three yards high at the shoulder. They are the largest existing quadrupeds. Several fossil animals of this family of still larger bulk have been discovered, including the mammoth and the mastodon. The Indian elephant is domesticated and used as a beast of burden.

Meloeonian Mysteries were festivals of symbolic rites, in which representative gods and goddesses were honoured. They were performed at Athens, and at Eleusis (goddess of corn) was the chief divinity celebrated.

Meloeon, in astronomy, means the height of a celestial body above the horizon.

Meloeon, a fairy personage of a "tucky" disposition, who is supposed to interfere in human affairs with mischievous intent.

Meloeon Marbles, a great collection of sculptures, got together by the 7th Earl of Elgin, in Greece, and brought to England in 1822. These celebrated treasures had originally formed part of the Parthenon at Athens, and were the work of Phidias. Lord Elgin expended over £70,000 upon them, and they were purchased for £25,000 for the British Museum, where they are now to be seen.

Meloeon (Eleac, or Eretriac sect, alternatively) School, a school of philosophy, founded in Eleus by Phaedo, the pupil of Socrates, but of its theories little that is definite has been preserved.

Meloeon, a term derived from the alchemists, and referring to a substance or tincture which it was supposed would transmute inferior metals into gold, and also make old men young again. The word is now applied to many essences and decoctions.

Meloeon, the largest animal of the deer family, possessing

enormous antlers, and standing, when mature, about seven feet high. The American moose is of the same family. Elk hunting is an exciting sport, and is much indulged in in Canada.

Ell, an old English cloth measure, representing a length of 45 inches. It varied in other countries, from 22 inches in Saxony to 47 inches in France.

Ellipse, in geometry, a compressed circle or oval, forming a curve so marked out that the sums of the distances of each point in its periphery from two fixed points are the same.

Elm, a large, wide-spreading tree having a dozen species, and common to Europe, India, China, and North America. It makes valuable timber, its wood being hard and durable, and for shade and ornament, with its curling branches and ample foliage, is unsurpassed.

Elongation, an astronomical term expressing the angular distance from the sun at which a planet is observed.

Elopement, a clandestine running away of a woman with a lover, rendering the man liable to punishment when the woman is under eighteen.

Elzevir, the name of a celebrated family of Dutch printers, who produced editions of Latin, French, and German classics, which were highly valued for their beauty of type, and accuracy of printing. They flourished in the 17th century.

Embalming, the process by which dead bodies are preserved from decay by means of spices and drugs. The art reaches its perfection in ancient Egypt, as the mummies which still exist so powerfully testify. In modern times many experiments in embalming have been tried, with various degrees of success.

Ember-days are days set apart for fast and prayer in the English and Romish churches, at the periods appointed for ordination, viz., the Wednesday, Friday, and Saturday after the first Sunday in Lent, the same days after Whist Sunday and after the festival of the Holy Cross in September, and St. Lucia in December.

Emblem, a symbolical figure or design referring to some person, power, or quality, thence or mortal. Quaker's "Emblems" are emblems in wood-pictures.

Emblements are land crops, or profits thereof, which belong to a tenant, or his executors, although the lease of the land may have expired before the crops matured.

Embossing, the art of stamping in relief letters or designs upon pliant substances.

Embryology, the science of embryos, tracing their development from the fertilization of the germ or seed to its maturity, and applying to all sections of the animal and vegetable kingdom.

Emerald, a variety of beryl of a clear green colour and transparent. It is highly valued as a gem, and the finest come from New Granada and Peru.

Emery, a granular substance of the corundum order, generally mixed with other metallic substances, and used in a powdered state for polishing and grinding purposes. Emery stone is chiefly found in Asia Minor and the Grecian Archipelago.

Emetine, an alkaloid substance forming the leading principle in ipecacuanha, and largely used as an emetic; hence its name.

Emigration is the removal of a person or family from one country to another for the purpose of settlement, and has been a common practice from the most ancient times. The general stream of emigrants in modern times, however, has been from Europe to America, and the British race have in this movement been the most active. America, indeed has been entirely developed by emigrants. British emigrants have had a wide field of choice, however, in Britain's vast Colonial possessions. Since 1853 an average of a quarter of a million persons has annually emigrated from Great Britain (including foreigners), the majority of them having proceeded to the United States. Canada has lately been the most attractive region, and both the British and the Canadian governments provide ample information for those wishing to proceed to British North America. South Africa has also drawn a stream of British emigrants to its mining

and other enterprises, though not perhaps as yet to such an extent as was anticipated at the close of the Boer war. The Emigrants' Information Office was established in 1886, and now performs invaluable public service.

Emir, a title signifying head or chief, applied in Mohammedan countries to princes, chiefs, or rulers. The direct descendants of Mahomet's daughter Fatima were also called Emirs.

Empirics, a sect of Greek physicians founded by Scorpion, who maintained that practice rather than theory was the safest guide in medicine. In recent times the term has been generally applied to quacks or experimenters in physic.

Emplectum, a kind of masonry used by the Greeks and Romans, consisting of walls built with hollow spaces between, which were filled in with rubble. Much used in fortification construction.

Empyrean, the highest heaven of the Ptolemaic system, and the supposed abode of the Deity.

Emu, a large bird of the Struthionidae family, inhabiting Central Australia, and resembling the Cassowary. It is unable to fly, but is very fleet of foot and frequently hunted.

Enamel, a vitrified substance applied as a coating to pottery and porcelain. The art was practised by the Assyrians and Egyptians, and was introduced to Europe by way of Greece. Enamels are all either of the transparent or opaque kind, and are susceptible to an immense variety of colouring, according to the metallic oxides introduced.

Encaustic, an architectural ornamentation consisting of sculptured representations of garlands or festoons of flowers or fruits, and generally wrought on friezes or capitals of columns.

Encaustic Tiles were much used in ancient times, as the evidences of ancient Rome and of the mediæval period in Europe generally clearly indicate. In modern times there has been a revival of this art, which has been very successful in many of the present-day examples of our own tile manufacturers, being of a more beautiful and durable character than those of former times.

Encyclical Letters, a term used in reference to letters addressed by the Pope to his bishops upon matters of doctrine or discipline.

Encyclopedists, a term first applied to the eminent writers who collaborated in the French *Encyclopédie* (1751-66). These writers comprised Diderot, D'Alembert, Voltaire, Helvétius, and others, and their writings generally were sceptical as to religion, and destructive as to politics, and had great influence in popularising the social ideas which afterwards resulted in the French Revolution.

Endive, a plant of the chicory family grown as a hardy annual and yielding a profusion of leaves. Is generally used for salad.

Endogens, the name applied to a large family of flowering plants, of which lilies, orchids, arums, grasses and sedges are prominent examples. The leaves are usually parallel-veined, and the flowers possess three parts. It is estimated that there are more than 20,000 species of endogens, including 5,000 of the orchid species.

Energy is of two kinds, actual, such as the body possesses in right of its motion, and potential, which is conserved. It is demonstrated that energy can neither be created nor destroyed. A definite amount exists, and though its form may be changed, it does not diminish. Heat is the energy of the universe emanating from the sun, and if it is made to disappear in one direction it manifests itself in another.

Engaged Columns are such as are partly embedded in the walls to which they belong. It is an architectural rule that at least half their thickness should stand out from the wall.

Engelhardtia, a genus of resinous trees, reaching in Java to a height of 200 feet. The trunk is cross-cut locally for conversion into cart-wheels.

English Language is composed of many elements Anglian, Saxon, Norman French, Scandinavian, Dutch and the various underlying contributions from Latin and Celtic sources. The result is a strong, expressive, composite language, now spoken by all

ances of English descent, including those of the United States, and the bulk of the population of the various dependencies of the Empire—Canada, Australia, New Zealand, Tasmania, Africa, etc., also largely in India.

English Opera, the First.—The first English opera was "Dido and Æneas," written by Henry Purcell about 1699. It was written for the breaking-up festivities of a school for young ladies, and the marvel of it is that it anticipated the operatic form of a hundred years later, the text being set to recitatives and melodies, and all spoken dialogue omitted.

Engraving is the art of cutting or otherwise forming designs or pictures on wood, stone, or metal surfaces for reproduction by some method of printing. Wood-engraving was the earliest in the field, dating from the 15th century. Later, engraving on steel and copper plates was introduced, and mezzotint, lithography, stipple, aquatint, etc. With the development of photography and an increased knowledge of the use of acids, many readier methods of engraving were adopted, and now wood-engraving, which was formerly resorted to for all general engraving purposes, is comparatively little used. What is styled "process" engraving is the most utilised.

Enlistment, is the act of volunteering for military or naval service. In former times recruits were considered bound on accepting bounty money, but as the law stands to-day they cannot be sworn in within twenty-four hours of their enlistment, when they may withdraw if they wish upon repaying the bounty and costs.

Ensign, a former title given to a commissioned officer of the lowest rank in a foot regiment, and so-called because he was entrusted with carrying the colours or ensign. The rank was abolished in 1871. Officers of like rank are now styled sub-lieutenants.

Ensilage, a method of storing and preserving fodder, vegetables, etc., in pits dug in the ground, and excluded from air or light. Although the system was practised in ancient Rome, it was not until the latter part of the 19th century that it was revived in England.

Entablature, that portion of a building which surmounts the columns and extends to the roof of the tympana of the pediments. It comprises three parts, the architrave, the frieze, and the cornice.

Entasis, the swell of the column in either of the orders of architecture.

Entellus, one of the common monkeys of India, with a ridged forehead, a long tail, and whiskers and beard. It is regarded by Hindus as sacred, and enjoys immunity from injury at their hands.

Entomology is the study of insects, and deals with three main groups—*Amictabola*, which are wingless and undergo no metamorphosis; *Hemimetabola*, which experience metamorphosis in very similar three stages; and *Holometabola*, which go through the same metamorphosis, each stage being markedly different from the other.

Entomostraca, a Crustacean sub-class, known as water-beetles, remarkable for a horny shell covering, jointed, and subject to regular periods of moulting. They mostly live in stagnant waters.

Entozoa is a term used to designate generally internal parasites, such as intestinal worms.

Envelopes, as wrappers for enclosing letters, were not in ordinary use until after the introduction of the penny postage system in 1840. They were known in France, however, in the 17th century.

Envoy, a special diplomatic agent deputed to represent a government at a foreign court, or to perform a special service, such as the negotiation of a treaty.

Eocene, a geological term applied to the lower division of Tertiary strata, and evidencing the beginnings of existing species.

Epect, the excess of the solar over the lunar year or month, and called menstrual and annual. The epect increases by eleven from one year to the next, and by twelve in some years.

Epaulettes, a shoulder badge fringed with cord worn by English army officers until 1865; now confined to naval officers, and varying in form and richness according to the rank of the wearers.

Phemeridae, a typical genus of insects of the order Neuroptera. In the larval condition they exist from two to three years, but no sooner do they arrive at maturity than their lives are hurried to a close. They rise up in myriads on warm summer nights, take no food, propagate, and perish.

Epheus, Council of, was held in A.D. 431, and noted for its condemnation of the Nestorian heresy. (See *Nestorians*.)

Epheod, a vestment worn by a Jewish high priest, and sometimes by priests of lower rank. In olden times it was of rich texture and set with gems.

Epheors were the five annually elected magistrates who exercised almost supreme authority in ancient Sparta; and later, the office was adopted by the Romans. The last of the Spartan epheors existed in 225 B.C. when Cleomenes III. exterminated the existing magistrates and abolished the office.

Epic, a heroic narrative poem dealing with important events and intralucing supernatural features; the most famous examples are Homer's *Iliad* and *Odyssey*, Virgil's *Æneid*, Ariosto's *Orlando Furioso*, Tasso's *Jerusalem Delivered*, and Milton's *Paradise Lost*.

Epicene, pertaining to both sexes, a term now usually applied, in grammar, to nouns which indicate indiscriminately male and female animals, as sheep.

Epidemiology, the science of epidemics, which in recent times has formed one of the most important branches of medical study.

Epidendrum, an orchid of any genus growing upon trees.

Epidote, a mineral occurring in prismatic crystals and consisting of silica, alumina, oxide of iron, lime and magnesia, and having a fairly wide distribution.

Epi-glottis, a lamella or cartilage designed to cover and protect the entrance to the larynx during the process of food swallowing.

Epi-gram, a term originally used to indicate a monumental inscription; afterwards applied to any concise and pointed specimen of verse, but in later times is applied to short, witty expressions in prose as well as verse.

Epi-logue, an address, in prose or verse, delivered at the end of a play, and a usual accompaniment to the dramatic works of the 16th, 17th, and 18th centuries, but now fallen into desuetude.

Epi-phan-y, a church festival celebrated on January 6, Twelfth Day.

Epi-phytes, a genus of plants which grow on other plants, but do not derive nourishment from them; ferns, mosses, lichens, and numerous orchids are of this class.

Epi-son, a distinctive mark on a coin, shield, or badge, used by the ancient Greeks to distinguish particular cities.

Epi-thalamium, a nuptial hymn or song, originally sung by the ancient Greeks and Romans at the door of the bride-chamber. Many specimens of this class of composition, by Sappho, Catullus, etc., have come down to us.

Epi-thelium, a layer of mucous membranes, comprising the cells of the surface of the body, and performing an important function in the glandular secretions.

Epoch, a period of time of such importance that succeeding years are numbered from it; differing from an era in that the latter is a succession of time, while an epoch is a point of time. Among the various epochs may be counted the birth of Christ and the Reformation. There are also the geological epochs, and epochs in arts, science, and invention, as well as in history generally.

Equation of Time represents the difference between clock-time and sun-dial time. This difference is greatest in November, when the sun is sixteen minutes behind. The only days on which there is perfect accord between the two times are April 15, June 15, August 31, and December 24.

Equator, the imaginary great circle of the earth, every point of which is 90 degrees from the earth's poles, and dividing the northern from the southern hemisphere. It is from this circle that the latitude of places north and south is reckoned.

Equidae, the zoological term for the family of hoofed quadrupeds comprising two genera—*Equus*, to which the horse belongs, and *Asinus*, comprising the ass and zebu. In the Tertiary period there were several other species of Equidae—*Hipparion*, *Protolippus*, etc.—of which fossil remains have been discovered.

Equinox, the time when the sun crosses the plane of the earth's equator, making day and night of equal length, occurring about the 21st of March and the 22nd of September, when the spring and autumn quarters are respectively entered upon.

Equites, a body of ancient Roman Cavalry, recruited from citizens of rank, and forming the equestrian order, coming next to the senatorial.

Equity, a term used to express a modification of the severer form of law in order to insure equal justice. It is the principle of fairness, applied to general rule, and in recent times all English courts administer equity as well as law.

Eras are distinctive periods of time associated with some remarkable historical event or personage. The *Christian era*, dating from the birth of Christ, did not obtain adoption for the reckoning of the years until the 8th century, though invented by Dionysius Exiguus in the 6th century. It is now generally understood that the year A.D. is put too late by at least three years. The *7th c.* *15th c.* dates from 3700 B.C.; the *Julian era*, from the alteration of the calendar by Julius Caesar, 45 B.C.; the *Mahomedan era* from A.D. 622.

Erastians, followers of Erastus, who, in the 16th century, advocated the restriction of ecclesiastical power.

Ergot, a fungoid growth that affects the seeds of various grasses, causing them to blacken and lose their virtue. The ergot of rye has medicinal value, and is used to assist contraction in maternity cases.

Eridanus, the constellation of the summer river in ancient astronomy situated south of the Taurus, and visible only in the southern celestial hemisphere. It contains one star of the first magnitude, *Achernar*.

Erl-King, a forest fiend of the German mythology, whose wiles were generally exercised in luring children from their homes and carrying them off. In Goethe's ballad of the "Erlkönig" it is a traveller who is lured to destruction.

Ermine, a small, beautifully-furred animal found in northern latitudes, and most abundant in Arctic America. Its entire coat becomes a lovely white in the winter, the tip of the tail only remaining black. Its fur is highly prized.

Error, Writ of, a process issued when a palpable error has been made in court proceedings, authorising its revision in a higher court.

Erise, the old Gaelic dialect of Ireland, and afterwards of the Lowland Scots.

Escapement is the contrivance by which the pressure of the wheel in a watch or other timepiece is accumulated to the vibratory action of the pendulum or balance-wheel, providing the regulating power which maintains an even impulse in spite of irregularities caused by friction or air resistance.

Escarpment, the face of an abrupt cliff or hill; also a portion of fortified ground whose edge is cut away almost vertically, to render it impossible for an enemy to climb.

Escheat, a term in law signifying the reverting of lands to the Crown, or the original lord, through the failure of heirs.

Escorial, a magnificent palace built in the 16th century by Philip II. of Spain at a village 16 miles north-west of Madrid. It comprises, in addition to a palatial residence, a fine Doric church, a valuable library, and the royal mausoleum, the burial place of the kings of Spain. Although it has suffered from fire and depredation, it is still one of the finest public buildings in the world.

Escutcheon, a shield-shaped surface called a field, upon which a man's armorial bearings are represented. A woman's escutcheon is lozenge-shaped.

Esoteric, a term which had its origin in the teaching of Aristotle, but in later times has been applied to such doctrines as are intended only for privileged students or those of the inner circle.

Espalier, lattice work upon which to train fruiting or ornamental trees.

Esparto Grass, grows in great abundance in Spain and North Africa, the pulp of which is largely used for paper-making, as well as for other purposes.

Esperanto, a proposed universal language, invented by Dr. Zamenhof, of Warsaw, and based on phonetic principles. Many Esperanto societies exist in various countries. Introduced into England in 1902.

Esquimaux.—The people of the Arctic regions. They dwell in skin tents in summer and closed huts in winter, and live by hunting and fishing.

Esquimaux Dog, a peculiar and very hardy animal of great utility to the inhabitants of the Arctic regions as sledge-drawers. In appearance it suggests the Pomeranian, but is of a larger breed and has a wolf-like head.

Esquire was formerly something of a distinctive title applied to the otherwise untitled sons of nobles, also to knights, officers, officials, and professional men; but now accorded generally as a matter of everyday courtesy in addressing people who are of good social standing.

"Essays and Reviews," the title of a volume of theological essays, published in 1860, which caused a considerable sensation in religious circles by the unusual freedom of thought it displayed. Among the contributors were Mr. Temple, Dr. Temple, Dr. Rowland Williams, and other Church of England dignitaries.

Essenes, a Jewish sect established in the 2nd century B.C., aiming at a higher spirituality, and living an ascetic life. "The love of God, the love of virtue, and the love of man" was their motto. They were restricted to Palestine, and did not exist as a sect after the destruction of Jerusalem.

Essential Oils are oils derived from plants by distillation or expression, and much used in perfumery as well as to some extent in medicine.

Estates of the Realm in Great Britain consist of the Lords Spiritual, the Lords Temporal, and the Commons.

Estoppel is a legal term indicating that a person is barred of a legal remedy because of some former act which precludes him from the right. Estoppel may be either by deed or act.

Eatovers, necessities to which a person is entitled by law, as in the case of a tenant who is privileged to help himself to wood for fuel or repairs, or in the case of a woman separated from her husband who has a claim to alimony from her husband's estate.

Etching, a process of engraving, on copper usually, the design being drawn with a steel needle, and the lines produced by the action of an acid or mordant. Some of the more notable etchings of recent times were done by Mr. Whistler.

Ether, a volatile liquid, consisting of carbon, oxygen and hydrogen. It is a valuable anesthetic obtained by heating alcohol with sulphuric acid.

Ethics, the science of moral conduct and duty, a study founded on psychology, and intended to determine what is right or wrong, according to circumstances, conditions, and natural powers and obligations. Aristotle, Plato, Kant, Bacon, Hobbes, Paley, Wilewell, Hume, Bentham, Locke, Mill, and Herbert Spencer have all contributed to the development of Ethics, the last-named being the most illuminating of exponents of a clear ethical system.

Ethide, a compound formed by the union of an element with the monad radical ethyl.

Ethnology and Ethnography are the kindred sciences which treat of mankind, the latter classifying and describing various racial differences, while the former inquires into "the mental and physical differences of mankind and the organic laws upon which they depend." Both sciences are included in Anthropology. Ethnologists divide mankind into three classes only: *Mongols* with tawny skins, straight black hair, flat faces, and receding foreheads; *Negroids*, with black skins, flat noses, projecting jaws, dark woolly hair; and *Caucasians*, with white skins, straight foreheads, prominent noses, and hair mostly brown. The Caucasians are further divided into the Aryan and Semitic races.

- The Mongols are native to Asia, America, and Polynesia; the Negroes to Africa; and the Caucasians to Europe and Western Asia.
- Muscan Pottery** comprises the early cinerary urns; black, unglazed ware, with figures in low relief, painted, imitation Greek vases; and vases coated with black varnish, with figures in relief.
- Nymtology**, the study of the science and structure of words, including classification and derivation.
- Nuomine**, an anæsthetic which makes operations possible that might not otherwise take place owing to heart weakness, for the patient remains conscious during its use, although these parts of the body to which it is applied are insensible to pain. It gives the surgeon more time, and does away with certain people's conscientious objections to anæsthetics.
- Nucalyptus**, an Australian tree that grows to a great height, and possesses remarkable properties. It exudes a valuable gum, has a fibrous bark, and yields an oil from its leaves which is of great use in bronchial affections.
- Eugenics**, the science of racial progress as affected by heredity and environment, first formulated by the late Sir Francis Galton, who in 1905, in this connection, endowed a Research Fellowship at the University of London, and at his death in 1911 bequeathed to the University £45,000 for promoting the study of national eugenics. Thus a Galton Professorship of Eugenics was established.
- Nomphalus**, a species of extinct snail whose fossil discoidal shell is frequently found in the rocks of the Palæozoic period.
- Nupatorium**, a genus of plants of the Composite order, with clustrous flowers, native to America. One species, hemp agrimony, is found in Britain.
- Euphemism**, substitution of a pleasant for an unpleasant, a refined for a vulgar, word, in speech or writing.
- Euphorbiaceæ**, an order of apetalous plants of wide distribution, comprising herbs, shrubs, and trees, bearing flowers and fruit. The latter sometimes yields an acid, more or less poisonous, juice, and in other kinds yields starch, cassava, certain oils, and caoutchouc. The box-tree is of this order.
- Euphuism**, an affected literary style, originating in the 16th century, and deriving its name from Euphuus, the chief character in John Lyly's *Anatomy of Wit*, issued in 1579, a work of forced elegance and bombast. From these exaggerations, however, there sprang many acceptable embellishments to the English language.
- Eurasians** are half-castes, one of whose parents is European and the other Asiatic.
- Euterpe**, an order of palms belonging to tropical America and the West Indies, with very long, slender stems, surmounted by a close cluster of leaves and an edible fruit. There are several species.
- Evaporation** is the process by which a solid or liquid is resolved into vapour by heat. It is a process that it always is acting on the surface of the earth, especially in connection with the sea and other water areas, the vapour rising therefrom being lighter than the air, forming clouds, which afterwards break, the vapour thereupon falling to earth again as rain. The same process is constantly in action over smaller surfaces, the rate of evaporation being dependent on the general atmospheric conditions.
- Evolution**, in biology, is, in the words of Huxley, "a general name for the history of the steps by which any living being has acquired the morphological and the physiological characters which distinguish it." The theory, as laid down by Darwin, "is that all existing species, genera, and classes of animals and plants have descended from a few simple forms, the process being controlled by natural selection."
- Excommunication**, exclusion from the rights and privileges of the Church. It is of two kinds—the Greater, which means a total cutting off, and the Lesser, which only shuts out from participation in the Eucharist. In olden times, Greater Excommunications were often launched against rulers and leaders, and were regarded with considerable awe.
- Exeat**, authority to "go out," as of a bishop giving leave to a priest to remove from his diocese, or of the master of a college permitting a student to leave. In law, a writ of *exeat regno* is sometimes issued to prevent a witness quitting the country.
- Executions**, the carrying out of the sentence of death, are variously performed. In Great Britain the hangman performs the work within the precincts of the gaol; in France, Belgium, Denmark, Switzerland, and parts of Germany the guillotine is used, and in the United States electrocution is resorted to.
- Executor**, a person named by will to administer a testator's estate either alone or with another or others. An executor can decline to act by formally renouncing, but if he accepts it will be his duty to have the will proved within six months of the testator's decease, and to proceed to carry out the directions contained in the will.
- Exedra** were common in ancient times, and consisted of raised platforms, approached by steps, and containing public seats for rest and conversation. The term is now sometimes applied to any external recess in the wall of a large building.
- Exetastes**, a genus of flies of the ichneumon family, with impunctate claws, and having about 50 species, more than half of which are European.
- Exogens**, the old term for Dicotyledons, meaning the process of plant or tree growth where the stem forms in a succession of concentric layers, each layer marking a year's growth. Most forest trees are of the exogenous type.
- Exorista**, a parasitic fly, having its antennæ projecting from the middle of the face, and the third joint considerably longer than the second.
- Esoterics**, the opposite of esoteric, is the term applied to doctrines openly expounded.
- Exotics** are plants of foreign origin not fully acclimated.
- Explosives** are substances by whose combustion gas is generated in such volume as to induce explosion. Gunpowder is the best known example, and has been in use for many centuries. Recent years have seen great developments in explosives, many powerful new preparations having been introduced, including nitro-glycerine, dynamite, gun-cotton, cordite, forcite, etc.
- Extract**, an essence or tincture drawn from a substance by chemical process, the agent of evaporation being water, alcohol, or ether, or a combination of them, according to the substance to be treated.
- Extradition**, the act of giving up fugitives from justice by one country to another, and in the United Kingdom can only be granted after a magisterial investigation, when, if the claim for extradition is justified, the Home Secretary grants the necessary warrant. Great Britain has extradition treaties with nearly every country possessing an organised government. A purely political offence is not extraditable in England.
- Extreme Unction**, the final sacrament of the Roman Catholic and Greek Churches, administered to a dying person, and consisting of the anointing with holy oil, after confession and absolution.
- Eye**, the organ of vision, assumes a variety of forms in different organisms, from the mere rudiments of eyes in infusorians to the complex and delicate visual organ of the higher animals. In man, it is a hollow ball of globular shape, consisting of an opaque membrane, the *Sclerotic*, forming the outer covering of the eyeball; *Choroid* in front, a horny, transparent structure, intersected with blood vessels and nerves, and carrying the Iris and Pupil; and the *Retina*, the innermost coating of the eyeball. The optic nerve transmits to the brain the visual images received. The eyeball is filled with fluid refractive media, and the crystalline lens in the axis of vision collects the rays of light to a focus on the retina. The movements of the eye are controlled by six muscles extending from the back of the orbits to the front of the eyeball. The lachrymal gland is at the outer corner of each eye, and secretes the watery fluid called tears. Protective functions are performed by the eyelids, eyelashes, and eyebrows.
- Eyebright**, a genus of plants, of which only one species, the common Eyebright, or Eyewort, is known in Europe. Its juice is aromatic and astringent, and used to be a country remedy for eye ailments.

Eye-teeth, the two canine teeth of the upper jaw, next to the grinders.

Furra, a species of wild cat, with reddish fur, exceptionally long body, and long tail, native to Texas, Louisiana, and South America.

F

Fabian Society, an association formed in 1883 with socialistic aims, but favouring the old "moral suasion," rather than distinctly aggressive, lines. Mr. Bernard Shaw and Mr. H. G. Wells have been prominent Fabians.

Fables are fictitious narratives intended to enforce some moral precept, and may be either in prose or verse, and deal with personified animals and objects or with human beings. They take the form of the *apologue*, which presents incidents that could not have happened, such as *Aesop* in ancient times, and Hans Christian Andersen and the Brothers Grimm (in many of their stories) in later days, have given us; or the *parable*, which relates to matters that might have occurred.

Facsimile, an accurate copy of an original letter, document, manuscript, or drawing. Aided by photography, facsimile reproductions have been much easier of achievement in recent years than formerly.

Faction, a name originally given to the contending parties in the ancient Roman chariot-racing sports. They were distinguished by different coloured garments, and they and their supporters were frequently drawn into fierce conflict outside the arena. In modern times the term has been mostly used to designate combinations of persons opposed to established authority.

Factory Legislation dates almost from the beginning of factories, when Watt's steam engine and the great inventions in textile machinery led to the establishing of these gigantic workshops. There were Factory Acts passed in 1802 and 1819, for limiting the hours of labour and prescribing health regulations, but it was not until the passing of the Ten Hours' Bill in 1847 that any really satisfactory legislation was introduced for the "slaves of the mill." There were no factory inspectors until 1833, when three were appointed. The general condition of factory life was much improved by the Factory and Workshop Act of 1898 and other Acts on similar lines were passed in 1892, 1901, and 1905 respectively. In 1907, however, a consolidating measure was passed (called the Factory and Workshops Act 1907) which superseded previous Acts and made the whole factory code one consolidated law. By the present law a staff of 205 inspectors (including 18 women) is employed. The Act was extended to Laundries from Jan. 1, 1908. In Jan. 1913, there were 217,275 factories and 155,667 workshops (not including men's workshops, docks, etc.) upon the registers; and the number of persons employed in factories was over 200,000, and in workshops (including men's) 650,000. The Home Department is the controlling authority.

Fagging, a public-school custom in England, once very prevalent, but now falling into disuse, whereby junior scholars were made to perform menial duties for their seniors, receiving in return protection from the insults or attacks of other boys.

Faience, a kind of decorated glazed earthenware, invented in Faenza, Italy, about the end of the 13th century. Wedgwood-ware is a notable example of modern faience.

Fallia, a light silk fabric used for veiling material and other purposes of adornment. In the Middle Ages the name was applied exclusively to long veils worn by nuns.

Fairies are imaginary creatures supposed to be invested with supernatural powers. At one time a general belief in them was prevalent, especially amongst the peasantry, and the uncivilised, rarely still existing cling to similar ideas. It was fancied that the world of fairyland was composed of good and evil spirits, variously embodied, always contending for supremacy, and exercising good and

bad influence over humankind. If a person was lucky it was the work of the good fairy, if unfortunate the evil fairy was the cause. Early literature is crowded with the denizens of fairyland—fairies, elves, fayes, sylphs, sprites, gnomes, goblins, genii, and so forth. Shakspeare's "A Midsummer Night's Dream" is a fairy world of its own, and Spenser's "Faerie Queen" is a still more separate and distinct creative effort. Among the fairies of the domestic order, "Robin Goodfellow" was much talked of in England; as the "Banshee" with its warning apparition, was peculiar to Ireland; while the "Brownie," who rendered nocturnal help in household affairs, was more special to Scotland. In Oriental literature, particularly the "Arabian Nights," the fairyland opened up to us a wonderfully vivid and active realm.

Fairing, a present purchased at a fair, or money given to be expended thereat.

Fairs were established in mediæval times as a means of bringing traders and customers together at stated periods, and formed the chief means of distribution. The great English fairs of early times were those of Winchester and Stourbridge, to which came foreign merchants as well as traders from all parts of the kingdom, everything being sold at these gatherings, from precious stones to herrings, from costly silks to homely huckram. As far as Great Britain is concerned to-day, improved conditions of transit and distribution have practically rendered commercial fairs unnecessary, though horse, cattle, sheep and pleasure fairs continue to be held. In less populous and more remote countries there are still important fairs, such as those of Nijni-Novgorod, Lelaps, Frankfort, and Lyons.

Fairy Rings are circular discolorations or indentations in fields caused by the growth or action of certain fungi, sometimes making their appearance in a single night and giving the circle the aspect of being strewn with ashes. In olden times it was imagined that the rings were the dancing circle of fairies.

Faith-Healing is treatment of sickness based on the supposed Scriptural doctrine that prayer and faith are the true, and only necessary, healing powers. Nevertheless, the Christian Scientists, Peculiar People, and others who endeavour to follow out the idea and fail to procure medical aid in cases whereby fatal results ensue, are liable to prosecution. **Fakirs** are Mahomedan mendicants who are held in great regard in India. There are two classes: those who are strict devotees to the principles of Islam and are called dervishes (*s.w.*); and those who are unattached to any religious order, but are simply wandering Mussulman beggars—or itinerant so-called "holy men." Some of the more fanatical fakirs commit self-mutilation, and pride themselves upon their wretchedness.

Falchions were a kind of sword, generally curved, used by the Roman soldiers, and afterwards adopted by other nations.

Falcon, a diurnal bird of prey of the *Accipitres* order, of great swiftness of wing, feeding on birds and small mammals, which it captures alive. Has a short bent bill, sharp hooked claws, and an eye of great power. The Ger-Falcon, which inhabits northern latitudes, is the most powerful of the falcon family. It was the Peregrine Falcon that was mostly used in the sport of falconry in olden times. These birds were difficult to train, and the office of falconer was an honourable and important one. When the quarry was sighted, the bird was unhooded and set upon mounting high into the air would dart swiftly down and strike the prey. The heron was the usual victim.

Falculia, a black and white bird only found in Madagascar, possessing a bill shaped like a sickle.

Faldstool, formerly a folding stool, but now applied to a small reading desk in cathedrals and other churches at which the litany is recited by the officiating cleric.

Falerian Wine, famed for its place at the banquets of the ancient Romans, was made from grapes grown at Falerus. Virgil, Horace, and Martial all referred to it with enthusiasm.

Fallow Deer received its name from its fallow or yellow colour. It is smaller than the red-deer, and has cylindrical antlers with palmated ends. It is native to many parts of Europe, and is a well-known denizen of British parks.

Falsetto, in music, refers to the tones of a voice higher than the natural tones. It is more common in males than females, and is seldom used in choir singing except by male altoes.

Fanilists, a sect existing in England and Holland in the 16th century, founded by Hans Niklas, who advocated the doctrine that religion was a matter of love rather than of faith.

Fandango, a lively Spanish dance executed by two persons, who usually mark time with castanets, and gradually increasing in pace until the dance finishes in a swift climax.

Fans were used in ancient times in Greece and Rome, but were not much seen in England until after the Conquest, when they were introduced from France. Examples of Egyptian fan-handles are to be seen in the British Museum.

Fantail, a favourite variety of the domestic pigeon; also a genus of Australian birds of the Muscipapidae family.

Fantasia, the name given to a fanciful musical composition, which does not conform to any regular style or series of movements.

Fantoccini, or marionettes, were first introduced in Italy, where they are still popular. Our English "Punch and Judy" descended from this source.

Fan Tracery, a complicated style of roof-vaulting, elaborately moulded, in which the lines of the curves in the masonry or other material employed diverge equally in every direction. It is characteristic of the late Perpendicular period of Gothic architecture, and may be seen *in excelsis* in St. George's Chapel at Windsor and the Chapel of Henry VII. at Westminster Abbey.

Farce is comedy in its broadest form, usually confined to short pieces, and admitting of free and exaggerated treatment calculated to arouse laughter.

Farmer-General, the name given to any of the numerous aristocrats who in the days of the old French monarchy farmed certain taxes, contracting to pay the Government a fixed sum yearly, on condition that the specified taxes were collected and appropriated by themselves. The revolution of 1789 swept Farmer-Generals away, and many of them were sent to the guillotine.

Farthing, an English coin which has been current from the time of King John, when it was composed of silver. It was not until the Stuart period that the farthing was coined in copper. Half-farthings were coined in 1843. (See *Queen Anne's Farthings*.)

Farthingale, a hoop of whalebone worn beneath a woman's skirts for the purpose of extending them, fashionable in the 16th and 17th centuries. The crinoline of the middle part of the 19th century was a partial revival of the fashion.

Fasces, a badge of office in ancient Rome consisting of a number of rods fastened together with an axe-head protruding from them. They were carried in front of the Roman magistrates on public occasions, and were also used for flogging criminals previous to execution.

Fascination, a spell-like influence formerly supposed to be possessed by certain persons over others, and also thought to be a power exercised by snakes over their intended victims, but doubtful even in the latter case.

Faesi Capitolini, marble tablets found in the ruins of the Roman Forum in the 16th century, and containing a list of the Consuls from the year of Rome 250 to 765.

Fatalism, the theory that things are fore-ordained and must happen, as opposed to reason. Orientals are mostly fatalists, but few Europeans of prominence have in modern times allied themselves with the doctrine. Napoleon I. the man of destiny was, however, an avowed fatalist, as was Napoleon III.

Fata Morgana, the name given to a curious mirage often observed over the Straits of Messina, and supposed to be ruled by the fairy Morgana.

Fathers of the Church were early writers who may be said to have laid the foundations of Christian ritual and doctrine. The earliest were the Apostolic Fathers, so called because some of them were contemporary with the Apostles. The next in order are the Primitive Fathers of the 2nd and 3rd centuries, including Justin Martyr, Clement of Alexandria, and Tertullian. The later Fathers were of the 4th and 5th centuries, among them being Athanasius, Basil, and John Chrysostom.

Fathom, a measure of depth of six feet, used in sea-soundings.

Fatigue-Duty, the routine employment of soldiers distinct from the use of arms.

Fats are only substances furnishing the chief adipose tissue of animals. Among the solid neutral fats are spermaceti, lard, and suet, and composed of carbon, hydrogen, and oxygen. Steam, palmitin, and olein are common forms of fats. Fats that are treated with alkali are saponified.

Fault, a geological term designating a breakage or displacement in the continuity of any rocky strata. The breakage sometimes amounts to thousands of feet, but ordinarily to not more than a few feet.

Favosites, a kind of fossil coral found in the Silurian, Devonian, and Carboniferous strata, and of honey-combed form.

Feathers, the epidermal covering forming the plumage of birds. A feather comprises a main stem or shaft, a supplementary stem or after-shaft, and a series of lateral webs, each of which contains numerous small branches termed barbs. A bird carries various classes of feathers, the two main divisions being the quill feathers of the wings and tail, and the clothing feathers of the body. Feathers are of every variety of colour and of many shapes, the more beautiful of them being extensively utilised in millinery and for other adornments. Ostrich feathers are worth over £40 a pound.

February, the second month of the year, comprising ordinarily 28 days, but in leap years extending to 29 days. When first introduced into the Roman calendar by Numa about 713 B.C., it was made the last month of the year and preceded January. It was not until 450 B.C. that it was made the second month.

Fees, in law, are either absolute, that is, when lands are held in fee simple for the owner and his heirs for ever; or limited, when the land can only be held by specified heirs or on particular conditions.

Fellbrige, the name of a septennial festival held in Provence, by writers of the "langue d'oc," to celebrate the troubadours of the Middle Ages.

Felidae, the scientific name of all mammals of the Carnivore order which walk upon the tips of their toes, and embracing the members of the cat family, from the lion downwards.

Fell, a term in weaving indicating the end of a web formed by the last three of the loom, and in sewing a form of hem in which one edge is folded over the other and secured with stitches; also a rocky upland, usually barren.

Fellahs, or **Felacheen**, are Egyptian labourers, agricultural chiefly, and form the lowest class of the community, possessing little or no political status. They are of Nubian, Coptic, and Arab descent.

Felo-de-se. (See *Sulicide*.)

Felonys, in law, is any crime of a more serious nature than a misdemeanour. In former times such an offense was punishable by death and forfeiture of lands, but since about the middle of the 19th century the only felonies involving capital punishment are those of murder and treason.

Felspar, the name given to a group of minerals, silicates of aluminium, and occurring in crystals. It is formed in granite and other rocks of ancient formation, and is much used in the manufacture of porcelain. Moonstone is a variety of felspar.

Felt is unwoven wool, hair and fur matted together by moisture and heat, the fibres becoming so closely intertwined that a compact cloth surface is formed. Roofing felt is produced by mixing the material with coal-tar or asphalt.

Felucca, a long narrow vessel with two lateen sails;

occasionally propelled by oars and used on the Mediterranean for carrying light merchandise.

Femme Covert, a legal term designating a married woman who, in consequence of being under the protection and control of her husband, cannot sue or be sued for debt (except as regards her separate property, legally secured to her), or proceeded against in minor criminal cases because of the presumption that she would act under her husband's compulsion.

Fencibles, a body of volunteer cavalry organised in 1794 for service within the United Kingdom. It comprised over 24,000 men, was of great utility during the invasion panic of that period, and seems to have been the forerunner of the yeomanry cavalry of later times.

Fenestella, the name given to the niche set apart for the piscina in Roman Catholic churches, and situated on the south side of the altar.

Fenians, an Irish organisation begun about 1855 with the avowed object of establishing a republic in Ireland. The movement spread to the United States, and assumed at one time serious proportions. In 1864 numerous arrests of Fenians were made in Dublin, and in the following year the American Fenians issued a manifesto to the effect that American officers were proceeding to Ireland to organise an army of 300,000 men. A considerable fund was raised in America, and in 1866 an attempt was made to invade Canada by a band of Fenians, but they were speedily suppressed and the ringleader arrested. In 1867 two Fenian prisoners were rescued from a prison van at Manchester, when a policeman was shot. The leaders of this attack were arrested, tried, and executed. In the same year a part of the Clerkenwell prison in London was blown up by Fenians in order to effect the rescue of Fenian prisoners inside. The explosion caused the death of some 20 persons, and over 100 were wounded. The organisation continued to give trouble until about 1887, when dissensions among the brotherhood brought the movement to an end.

Fennec, the African Zerd, a small light fawn fox-like animal, with a black-tipped tail and large pointed ears. It is not a burrowing animal, but builds its nest in trees, and is of nocturnal habits.

Fennel, a plant cultivated for its aromatic seeds, which are of considerable utility as a medicament, and grown in British gardens for its leaves, for salads and garnishing.

Fens are low-lying lands covered with water, or of a boggy or marshy nature. The Fen districts of England are chiefly in Lincolnshire and Cambridgeshire, but in recent times most of the Fen land has been drained and put into cultivation.

Fiefdom, an act or deed of transfer by which the fee simple of any specified land is transferred for a consideration from one person to another.

Ferret, a carnivorous animal of the Polecat family, with a round head and long sinuous body, well adapted for following rabbits and game into their burrows and hiding-places, it being kept in this country for that purpose. It is a native of Spain and Africa, and does not exist in England in a condition of natural freedom.

Fetichism, the worshiping of a Fetich, any object supposed to be invested with supernatural powers, and including such objects as a serpent, a bear, a tooth, etc. It has been practised more or less by all primitive races, and is confined at the present day to a few of the savage tribes of Africa.

Feudal System existed in England from the Saxon period down to the end of the 15th century. It was a military and political organisation, based on land tenure, the land being divided into fiefs or fiefs, held on condition that certain military duties were performed; and, in default of this, the land reverted to the superior lord. Feudal tenures were abolished by statute in England in 1660, although from 1495 they had practically been imperative. The system was abolished in Scotland in 1747, but in France not until the Revolution of 1789. There was a feudal system in Japan as lately as 1871.

Fou de Jolie, the discharge of guns to denote public rejoicing.

Fouilleton, a French term applied to a serial story or other light literature occupying the bottom portion of a newspaper page, and adopted in England to some extent in recent years, several of the daily journals now running serial stories as part of their daily fare.

Fiasco, an Italian word signifying a fiasco, but applied both in Italy and elsewhere to a complete breakdown or failure in any enterprise, especially in regard to musical or dramatic performances.

Fiat ("Let it be done") a legal term generally applied to a decree, judgment, or warrant commanding a specific thing to be done.

Fibre, a thread-like filament, such as that constituting the tissues of animals and plants.

Fibrin, a nitrogenous compound of the proteid class, present in blood, and obtainable by beating the blood with twigs, to which it adheres. It is a white substance composed of carbon, oxygen, hydrogen, and other elements, is insoluble in water, but dissolves in solutions of certain neutral salts. There is a vegetable fibrin, extracted from certain grains.

Fibrolite, a white or light grey mineral of a fibrous structure; a sub-silicate of aluminium.

Figma, a curious kind of very small leaf-beetle, covered with short white hair and very destructive to grape vines.

Fialdura, a kind of thrush, a regular winter visitant to this country. It is of a reddish-brown colour with spotted breast and is about ten inches long.

Field-Marshal, the highest rank title in the British army and only bestowed on royal personages, and generals who have attained great distinction. The first English Field-Marshal was created in 1736, when John, Duke of Argyll, had the title conferred upon him by George II.

Field-Officer is of military rank between a captain and a general, as, major, lieutenant-colonel, and colonel.

Flary Cross, a call to arms used in the Scottish Highlands in olden times, and consisting of a wooden cross that was carried blazing to and fro among the clansmen, to rouse them to action.

Fife, a small flute with a compass of about two octaves, ranging from the second "D" above the middle "C." Fife and drum bands are common in the army.

Fifth-Monarchy Men, were a fanatical sect which proclaimed about 1645 that the Millennium was near at hand, when Christ would come to earth again and establish the Fifth Universal Monarchy. They were dispersed by Cromwell in 1653, but in 1661 revived and became a menace to the public peace and 17 of them were arrested and executed.

Fig, a tree common in most hot countries and bearing a fragrant fruit which is much liked as an article of dessert and has a large general consumption.

Figure, a well known comic character in drama and opera, invented by Beaumarchais, adopted by Mozart, and the name of a popular paper of Paris.

Fighting-Fish, small pugnacious Siamese fish with long snouts and ventrals of five rays. They are kept in glass globes in Siam, and when brought into contact will fight to the death, these encounters being the occasion of much gambling.

File Fish, a fairly common fish in European waters, mostly found in the Mediterranean, but not infrequently off the southern coast of England. It averages from 18 inches to 2 feet in length, and derives its distinguishing name from the toothed character of the dorsal fin.

Fillibuster, a name first given to pirates and buccaners in the 17th century, who took possession of small islands or lonely coast lands, and there maintained themselves apart from any governing authority. In later times the term was used to specify men taking part in expeditions whose object was to appropriate tracts of country and settle upon them in disregard of international law. The most notable expeditions of this kind in modern times were those of Narciso Lopez against Cuba in 1850-1, and that of William Walker against Sonora in Central America and Nicaragua, between 1855 and

1858. Both leaders were ultimately captured and executed.

Filigree, the name given to a class of ornamental work done with threads of gold or silver, or with fine wire, and frequently attached to apparel or decorative objects. It was made by the ancient Greeks, and in the Middle Ages was greatly in vogue, and reached a high standard of artistic beauty. It is still made to a considerable extent in certain parts of Italy.

Filioque, the part of the Nicene Creed which proclaims that the Holy Ghost emanates jointly from Father and Son, and is styled the doctrine of the "double procession." It is generally accepted in the Western Church, but is rejected in the Greek Church.

Filter, an apparatus used for clarifying water, and constructed in many different forms, the filtering substances used ranging from sand, charcoal, and sponges to porous stones and fabrics.

Filtration is the process of separating solid matter from a liquid, and the substances used for this purpose include charcoal, fine sand, unsized paper, linen, canvas, etc. The filtration beds used in connection with reservoirs for large water supply purposes are composed of fine and coarse sand, fine and coarse gravel, and large stones. For removing substances which are dissolved, distillation is requisite, and for the still more efficient filtration of serious bacteria, specially constructed filters, in which a fine earth forms the filtering medium, are necessary.

Finial (*archit.*), the term employed to designate the ornamental apex of a spire, pinnacle, or gable, and of Gothic origin.

Fir, a cone-bearing tree with small evergreen leaves and of considerable use as timber. There are four leading varieties—the Silver Fir, the Norway Spruce, the Larch, and the Lebanon Cedar. All these fir attain to a considerable height, and all yield turpentine or other resinous material.

Fire Engines, for forcing water upon burning buildings have been known since A.D. 70. In modern times great improvements have been made in these machines, steam power having been utilised with great effect in operating them. Some fire-engines are capable of throwing out 400 gallons of water a minute to a height of 130 feet, from a hose, the nozzle of which is 1½ inches in diameter. Motor fire engines are now much in use, and there is a general decrease in the number of serious fires, as compared with the period when less efficient engines were employed. The London Fire Brigade comprises a staff of 1,353 men, and is under the control of the City Council.

Fire-Fly, a well known beetle of the Elateridæ family which is able to throw out a strong phosphorescent light in the dark. There are some remarkable specimens in tropical countries.

Fire of London, of 1666, extended from East to West, from the Tower to the Temple church, and northward to Holborn Bridge. It broke out in a baker's shop in Pudding Lane, and lasted four days, and destroyed 89 churches, including St. Paul's Cathedral, and many public buildings, among them the Royal Exchange, the Custom House, and the Guildhall. In the ruins were involved 13,200 houses, and 400 streets.

Fire-Proof Buildings, are such as are constructed exclusively of non-combustible materials, such as stone, iron, brick, concrete and cement. To make wood fire-proof, coating of silicate of soda is necessary. Fire-proof materials are produced in most modern buildings.

Fireship, the name given to a vessel stored with inflammable and explosive material, and floated into the midst of an opposing fleet to cause destruction and alarm.

Firkin, a former measure of capacity, the fourth part of a barrel, now only used in reference to a small cask or tub for butter, lard, tallow, etc.

Firman, a document of authority issued by Oriental governments granting any special privileges or concession, and was given to a traveller insuring him official protection.

Fiscal Policy. (See *Free Trade*, p. 914.)

Fisk University, an American institution devoted entirely to coloured students, at Nashville, Tennessee.

Five-Mile Act, prohibiting dissenting ministers from preaching within five miles of "any corporate town, or of any place where they had preached since the Act of Oblivion, under a penalty of £40," was passed in 1665, but repealed in 1689.

Fixed Stars, those which until recently were supposed to maintain perennially their position in the firmament, relatively to each other, and which are still admitted so to do, approximately; thus being contradistinguished from the planets, or wandering stars. They form the luminousities of the constellations.

Fiabellum, an ecclesiastical fan, formerly employed to drive away flies from the chalice during the celebration of the Sacred Mysteries; the fiabellum was usually formed of the tail feathers of the peacock.

Flagellants were a fanatical sect which sprang into notice at Perouse in the 13th century during a time of plague. They held processions and begged themselves as they walked naked about the streets until they bled. They declared that sins could not be remitted without such practices. The sect continued down to the 16th century, in spite of their being declared heretics by Pope Clement VII., and 90 of them being burnt at the stake.

Flageolet, a sweet-toned musical instrument of wood with a fretted neck-piece, and a tube in which finger-holes and keys are placed. It is an important musical instrument, and is said to have been invented in 1571. There is also a double flageolet, producing double notes, and played by one mouth-piece.

Flag Officer, a British naval officer who enjoys the right of carrying a flag at the mast-head of his ship, and is of the rank of Admiral, Vice-Admiral, or Rear-Admiral. The Admiral's flag flies from the main mast, the Vice-Admiral's at the fore, and the Rear-Admiral's at the mizen.

Flagship, the ship that flies the Admiral's flag, and from which all orders proceed.

Flamen were priests of ancient Rome dedicated to the service of particular deities, such as those of Jupiter and Mars, and were always of pat.

Flamingo, a bird of dominant bright red or rose colour, with long slender legs, long sinuous neck, and a huge curved bill. They are picture-worthy birds, live on worms and molluscs, and are widely distributed, being found in Egypt, in Southern Europe and South America.

Flannel. (See *Wool*.)

Flat, a sign in musical notation (b) indicating that the note in front of which it appears is to be played or sung a semi-tone lower than its natural sound.

Flavin, a dyestuff prepared from quercitron bark, producing a bright yellow colour. There is also a substance called Flavindin obtained by fusion with potash.

Flax, a textile fibre obtained from the flax plant, which is an annual, and is largely cultivated for commercial purposes, being grown in Russia, Germany, Italy, Holland, and the North of Ireland. After undergoing various preparatory processes, the flax is spun into yarn and woven into linen fabrics.

Flea, a genus of parasitic insects possessing a suctorial mouth, from which protrudes a lancet-shaped proboscis, with which it pierces animal skin and draws blood. It is said that the "flea of man" (*Pulex irritans*) can leap 400 times its own length.

Fleet. (See *Navy*.)

Fleet Prison, a noted debtor's prison that stood in Farringdon Street, London, where the Congregational Memorial Hall now stands, taking its name from the Fleet Ditch. It was pulled down in 1846.

Flemings, the people of Flanders, whose ancestors of mediæval times greatly excelled in the textile arts, and it was to the migration of large numbers of Flemings to this country in the 15th and 17th centuries that England owes its early eminence as a manufacturing nation.

Fleur-de-Lis, the former national emblem of France, the flower of the lily. It was superseded by the Tri-colour in 1790, but is still adhered to by the supporters of the old French royalists.

Flint, a kind of silica of a light grey colour and

excessive hardness, which enabled it to be utilised in the formation of cutting implements in pre-historic times, and, before the invention of lucifer matches, was used along with steel for striking lights.

Flint Implements are fossil objects formed in the earlier geological strata, and constituting evidence of the condition and life of the period. These implements ranged from the unpolished spear and arrow heads of the Palæolithic age to the highly polished and more skilfully formed weapons of the Neolithic period.

Fitch of Dunmow, a bacon fitch awarded annually at Dunmow in Essex to any married couple presenting themselves and bringing proof that they have lived in perfect agreement, without quarrel or dispute, for the first year of their married life. The custom originated in the 13th century, and fell into abeyance in the 18th century, but has been revived in recent years.

Flock, a fibrous material for stuffing mattresses, upholstering, etc.; it is made by reducing coarse woollen rags, waste, etc., to a degree of fineness by machine manipulation.

Flodden Field, Battle of (Northumberland), was fought on September 9th, 1513, between the English and Scots. James IV. of Scotland, his leading nobles, and 20,000 of his army were slain. The Earl of Surrey commanded the English forces, and his loss was comparatively small.

Florin, a coin first made in France in the 13th century. The name was afterwards given to an English coin of the value of 6s. issued in 1337. The English florin of to-day represents 2s., and dates from 1849. There are florins in Germany worth nominally about 2s. 4d. English, Spain 4s. 4d., and Holland 2s.

Florist, one who cultivates or is concerned in the cultivation of flowering plants, or one who maintains and vends varieties of the different genera.

Flounder, one of the most familiar of the smaller flat fishes common round the British coasts, and seldom attaining a weight of over three pounds.

Flour, the finely ground meal of any kind of grain, but more particularly applied to that of wheat.

Fluorine, a chemical element found in combination with calcium or fluor spar, and occurring in minute quantities in certain other minerals. It was first obtained by Moissan in 1886, and possesses extraordinary corrosive properties.

Fluor Spar, a compound of calcium and fluorine, occurring chiefly in connection with silver, tin, lead, and cobalt ores. It is most abundant in Derbyshire, and forms a valuable flux in fusing refractory minerals.

Flute, a wooden musical instrument of much purity of tone, played by blowing through a mouth-hole, the notes being produced by the media of finger-holes and keys. The flute was familiar to the ancients, but was greatly improved by German and French instrument makers in the 17th and 18th centuries. It has a compass of three octaves.

Flux, any substance used in assisting the fusion of metals. The fluxes most used for large operations are limestone or fluor-spar, and for smaller purposes, alkalis, borax, etc. Black flux is obtained from cream of tartar, and is used mainly for analytical operations, while white flux, used for decomposing minerals, is obtained from carbonates of sodium and potassium in equal portions.

Fly, the popular name given to a large number of insects all of which are distinguished by having a proboscis terminating in a sucker through which fluid substances can be drawn up. The best-known species are the common house-fly, the blue-bottle fly, and the blow-fly. In the larval form, flies are maggots, and feed upon decaying substance, animal flesh, etc. Flies are enabled to walk upon ceilings or upright surfaces by having suckers at the soles of their feet.

Fly-catcher, the name of a numerous family of birds, of which there are nearly 300 species. They are insect feeders, catch their food in the air, and are more or less distributed over the world. Two of them, the spotted fly-catcher and the pied fly-catcher, are summer visitants of Britain.

Fly-drill, a kind of machine-tool having a reciprocating fly wheel imparting steady momentum; the

driving power consisting of a cord winding in reverse directions alternately upon a rotating spindle.

Flying Dutchman, a mythical mariner who, as the legend goes, was doomed as an expiation for his crimes to be for ever striving to reach harbour with his ship but never succeeding. Wagner constructed an opera round this weird subject.

Flying Fish are frequently to be seen in southern waters, and are capable of flying considerable distances—a quarter of a mile or more—without touching the water. They can be caught in nets while in flight.

Flying Fox, an animal of the Bat family, but of much larger size, found chiefly in Africa and Asia. Its habits resemble those of the common bat, except that it feeds entirely on fruits.

Flying Lemur, a remarkable family of mammals of which there are only two species, inhabiting Java, Sumatra and Borneo. They live on insects, fruit, and birds, and are provided with a parachute-like membrane which covers them from the neck to the tip of the tail, and used in regulating their flight.

Flying Lizard, a kind of Asiatic lizard possessing wing-like projections from each side, which enable it to make flying leaps through the air, though not sufficient for continuous flight.

Flying Machines. (See *Aerial Navigation*.)

Flying Squirrel, an animal of which there are several species in Europe and America. It possesses a parachute-like fold of skin by means of which it projects itself through the air. It is of the true squirrel type, and belongs to the Sciuridæ zoological classification.

Focus, a word designating the point at which heat or light is concentrated by refraction or reflection.

Fodder, food stall-fed to horses, cattle, etc., as distinguished from pasture feeding; also a weight-standard for lead, equivalent to 27 cwt. avoirdupois.

Fog is formed of aqueous vapour, or minute globules of water, near the earth's surface, caused by the cooling of the air below the dew-point. Huxley distinguishes fog from cloud thus: "A fog is a kind resting on the earth; a cloud is a fog floating high in the air." Large towns, and especially London, are most susceptible to fogs.

Fogey, an eccentric or old-fashioned person.

Foil, an extremely thin layer of rolled metal, as gold, tin, or lead, according to the purpose for which it is intended. Jewelers use it as a background to increase the colour or lustre of inferior precious stones. Any thin substances used for similar purposes—thrown into relief over other objects—is termed foil. Tin-foil, as its name implies, is tin rolled out into thin sheets in the flattening mill.

Fold, an enclosure or pen in which sheep or cattle are sheltered.

Foliation, a geological term applied to rocks whose component minerals are arranged in parallel layers as the result of strong metamorphic action.

Folio, a paper and printing term applied to paper which is only folded once, a half sheet constituting a leaf.

Folk Lore, a term used to denote the beliefs, traditions, legends, customs, and superstitions of the people, and was first suggested by the late Mr. W. J. Thoms, F.S.A., editor of *Notes and Queries*, in 1846.

Foot, a lineal measure of 12 inches of almost universal use, and originally adopted from the average length of the human foot. In prosody a foot is a measure of syllables making rhythmical accent.

Football is one of the most ancient outdoor winter sports, and was in a crude form popular in England in the Middle Ages. For modern developments of the game see articles in *Pears' Dictionary of Sports and Pastimes*.

Foot Guards in the British Army include the Grenadiers, Coldstream, Scots, and Irish Guards, from which the garrisons of London and Windsor are formed.

Foraminifera, an order of animals belonging to the sub-kingdom Protozoa, carrying a porous shell, and having gelatinous bodies without definite organs. They are of the most primitive organisation and of minute size. Their shells are composed of matter secreted from the water in which they live.

Forbesite, a name given by Kennigott to a hydrous bibasic arseniate of cobalt and nickel, found and described by David Forbes, the chemist, in the desert of Atacama, in veins in a decomposed diorite.

Force, as a term in physics, signifies an influence or exertion which, when made to act upon a body, tends to move it as it rests, or to affect or stop its progress if it be already in motion. Gravity, traction, repulsive energy are all physical forces. Moral force is a mental principle.

Forests in the British Empire. The woodlands of Great Britain comprise 21 million acres, less than 4 per cent. of the total area. Of these, 175,293 acres are national woodland, only about 57,000 acres being under timber crops. There are some 88,000 square miles of forest under Government protection in India, and 124,000 square miles outside their protection, besides large private forests. The average net annual revenue of the Indian State forests is over 8 million rupees, and the total number of foresters employed, including the Imperial Service, provincial, executive, and protective, exceeds 20,000. The Government has already planted 120,000 acres of forest in India. Next to India, Cape Colony has done best in forests, and yields fuel and building timber, and the Government has planted 30,000 acres. In the Orange River valley planting has been commenced, and also in the Soudan. The forests of Australia have jarrah trees which grow to the height of 120 feet and karri trees to 200 feet. A Departmental Committee on British Forestry is doing practical work under Government auspices, and the Treasury has made grants for lectureships in forestry at various educational centres.

Forgery, the fraudulent imitation of a signature or writing whereby injury is done to another, or some deceit is practised. Up to well into the 19th century, forgery was punishable with death in England, and at present penal servitude for life is the maximum punishment for forging bills and bank notes. Other classes of forgery entail maximum punishments of 14, 7, or 2 years' imprisonment respectively.

Forme, a body of letter-press type, composed and secured for printing from; or a stereotype in a similar condition of readiness.

Formic Acid can be obtained from a colourless fluid emitted from the bodies of ants, but is usually obtained by treating oxalic acid with glycerine. It is sometimes substituted for vinegar. It also exists in nettles and certain animal fluids.

Forte, a musical term signifying "loud," and represented by the letter "f"; "ff" (fortissimo) indicating "very loud."

Forth Bridge, which spans the Forth at Queen's Ferry, near Edinburgh, was completed in 1890 at a cost of nearly £2,000,000. It is one and a-half miles in length.

Forum, in ancient Rome, was a public meeting place, market or exchange. The Great Forum was reserved for banquets, and gladiatorial contests.

Fossils are mineral substances of organic origin found in the strata of former ages. They are animal and vegetable and have been the means of disclosing a knowledge of prehistoric periods which would otherwise have been unknown.

Fox, a well-known carnivorous animal of the Vulpine family, found in considerable numbers in most parts of the world. The common fox of Europe is a burrowing animal of nocturnal habits, living upon birds, rabbits, and domestic poultry, in the capture of which it displays much cunning. The fox in Britain is preserved from extinction chiefly for hunting purposes. Among other notable species, the Arctic fox, and the red fox of North America, may be mentioned.

Fox-Shark, a large species of shark common in the Atlantic and in the Mediterranean. It is very destructive to small fish, but although it attains a length of fifteen feet it is not to be classed with the sharks that are dangerous to man.

Franc, the unit of French currency, and a silver coin equivalent to one hundred centimes, or a little over one English penny.

Franchise, an incorporeal hereditament, analogous

to the liberty of the subject, in the literal sense; but usually interpreted to mean simply the right of voting in the election of a member of Parliament.

Franciscans. (See **FRIARS**.)

Franco-German War lasted from July, 1870, to May, 1871. It was opened by a declaration of war by Napoleon III., and a cry of "A Berlin!" but the Germans, who were much better prepared than the French, won victory after victory. In September Napoleon was made prisoner and after a surrender of 80,000 troops at Sedan, a Republic was then proclaimed, and Paris sustained a four-months' siege. In the end France ceded Alsace and part of Lorraine to Germany, who claimed a war indemnity of over £200,000,000.

Francolin, a genus of birds of the pheasant family living in the marshy woodlands of the Black Sea coast and in the Island of Cyprus. The Sangune Francolin is a gorgeous Himalayan variety.

Francs-Tireurs, the name given to an irregular body of French troops which came into prominent notice in the Franco-German War of 1870-1.

Frankincense is of two kinds, one being used as incense in certain religious services and obtained from olibanum, an Eastern shrub, the other is a resinous exudation derived from firs and pines, and largely used in pharmacy.

Frankenstein, the hero of the novel of that name by Mrs. Shelley. He is supposed to have been able to construct a living creature from the forces of nature under his control, which creature assumed the form of a monster that became the terror of its creator's existence.

Franklin, the name given in feudal times to a country landowner who was independent of the territorial lord, and performed many of the minor functions of local government, serving as magistrate, and so forth.

Free Church Federation, established in 1892, is an association of British Nonconformist Churches, formed with the object of promoting the general cause of nonconformity by combined action.

Free Cities. (See **MUNICIPAL LEAGUE**.)

Freehold, a legal term signifying an estate in fee simple, or fee tail, or for life, and to which no service to a superior (as in copyhold) attaches.

Freemasonry dates back to medieval times, if not to a more remote period. It is a secret organisation, having lodges for social enjoyment and mutual assistance. The Grand Lodge of England was established in 1717; that of Ireland in 1730, and that of Scotland in 1736. Freemasonry is under the Papal ban, Roman Catholics being prohibited from being Masons.

Freestone, any stone that can be easily worked with tools, the term being generally, however, specially applied to fine grained sandstone.

French Ministries of the Third Republic have been as a rule short-lived. That of M. Combes (which came to an end in January, 1905) endured for two years, seven months and a few days; that of M. Waldeck-Rousseau had a life of three years, and fifteen days, and M. Clemenceau was Premier 1906-8. The Ministry of M. Méline held together for two years, one month and sixteen days. The Ministry of shortest duration was that of M. Ribot in June, 1914, which lasted only three days; that of M. Dufaure, in May, 1873, fell on the fifth day of its existence. Next in shortness was the ten days' Ministry of General de Rochebouet, in 1877. In February, 1905, M. Rouvier became Prime Minister. In March, 1906, he was succeeded by M. Sarrien. Altogether (up to March, 1908) there were forty-two Prime Ministers of the Third Republic. They had formed forty-one Cabinets. In May, 1902, M. Aristide Briand became Premier. He was followed in turn by M. Monis and M. Calliaux; and in January, 1912, M. Poincaré acceded; on the latter's election to the Presidency M. Briand again became Premier, Jan. 20, 1913, but his Ministry only lasted until March 18, when M. Barthou succeeded. A fresh shuffling of the ministerial cards took place in June, 1914, when M. Ribot was Premier for three days, being succeeded by M. Viviani.

Fresco, a painting executed upon plaster walls or ceilings, and much in favour for churches and

public buildings in former times. The work is done on damp plaster with prepared pigments. In recent days dry fresco has been largely resorted to.

Freshwater Shrimp, a small crustacean abounding in British streams, and feeding on dead fish or other decomposing matters. Although of shrimp-like form, it does not strictly belong to the shrimp order, but is classified as *Gammarus pulex*.

Friars, members of certain mendicant orders of the Roman Catholic Church. The four chief orders of Friars are the Franciscans or Grey Friars, the Dominicans or Black Friars, the Carmelites or White Friars, and the Augustinians (Austin Friars). In the 13th century a brotherhood of Crutched Friars existed in England, so called from the cross or *crouch* worn by them.

Friday, the 6th day of the week, named after Frigg, the wife of Odin. It is the Mohammedan Sabbath, and is a general fast day of the Roman Catholic Church. According to popular superstition, Friday was an unlucky day.

Friendly Societies were established on a small scale towards the close of the 17th century, and were sufficiently numerous in 1793 to be placed to some extent under Parliamentary control. They are now very numerous, and in 1890 an Act was passed consolidating all previous laws regarding them. The Registrar of Friendly Societies is an important Government official, to whom returns have to be made, and who issues an annual report. The most important of existing friendly societies include the Oddfellows, the Foresters, the Druids, the Hearts of Oak, the Rational, the Church Temperance, and the Rechabites, also a temperance organisation. There are about 30,000 friendly societies in the United Kingdom, with a total membership of 15,000,000, and funds aggregating over sixty-five millions sterling. The Insurance Act of 1911 has linked up with the Friendly Society system by making "approved societies" channels through which the benefits of the Act can be administered to their members, and a large accession of members has resulted.

Friends. (See *Quakers*.)

Frigate, a small, swift war-vessel, generally with two decks, and carrying a number of guns, usually from 20 to 60. Now superseded by the armoured cruiser.

Frigate-Bird, a web-footed bird widely distributed over tropical latitudes, and deriving its name from its great expanse of wing and forked tail, which seem to suggest the shape of a swift vessel. It feeds on flying fish mostly, being unable to dive.

Fringillidae, the scientific family name of a large class of birds of the Passeroides order, including finches, sparrows, linnets, grosbeaks, weaver-birds, etc.

Frisians, an old Teuton race formerly settled on lands now covered by the Zuider Zee. Many of them joined in the Anglo-Saxon invasion of England, and occupied Mercian territory.

Fritillary, the name of a large class of British butterflies, all of them of beautiful colours and markings. There are seven species, the most prized of which is the "Queen of Spain" variety.

Frog, a familiar amphibian of interesting structure, breathing through gills in the earlier (tadpole) part of its existence, and through lungs later. It remains three months in the tadpole stage. The frog hibernates in winter at the bottom of the water.

Frost occurs when the temperature falls to or below 32° F., which is freezing-point.

Froth-Hopper, a family of insects related to the Cicadas, and possessing great leaping powers.

Fruit Eating, its healthfulness. Nothing is more palatable or wholesome than good peaches. They should be ripe, however, but not over-ripe, and may be eaten at any time, though it is better to make them a part of the regular meals. It is a mistaken idea that no fruit should be eaten at breakfast; indeed it would be far better if people would eat less bacon at breakfast and more fruit. The apple is one of the best fruits. Baked or stewed apples will generally agree with the most delicate digestion, and are an excellent medicine in many cases of indigestion. Green or half-ripe apples stewed and sweetened are pleasant to the taste, cooling, and nourishing. Raw

apples are better than liver pills. Oranges are very acceptable to most people; but the orange juice alone should be taken, and the pulp should be rejected. Lemonade is the best beverage in hot weather and during fevers, and when thickened with sugar is better than syrup of squills and other medicines in many cases of coughs. Tomatoes are very beneficial, but the skins should not be eaten. The small seeded fruits, such as blackberries, figs, raspberries, and strawberries may be classed amongst the best medicines. The sugar in them is nutritious, and the acid is cooling and purifying.

Fucosae, an order of seaweeds of a leathery structure, with dark spores underlying the fronds, and found both attached to rocks and floating. There is a gelatinous kind which is edible, and is commercially valuable as the source of iodine and as a manure.

Fugue, a kind of polyphonic musical composition of a contrapuntal form, in which a theme is enunciated, followed up, answered, and interwoven according to prescribed rules. Fugues are of several kinds, named in relation to the character of the theme, as diatonic, chromatic, doric, etc. Bach was perhaps the greatest of fugue composers; Handel was also highly effective in fugue writing.

Fulani, a Mohammedan race inhabiting the Soudan, at one time possessing a kingdom in Nigeria, sometimes called the Sokoto Empire.

Fullers' Earth, a special kind of clay or marl possessing highly absorbent qualities, and used from ancient times in the "fulling"—that is, cleansing and felting—of cloth. It is common in certain parts of the south of England, and is valued as a skin emollient.

Fur—the hairy protective coating with which Nature has provided numerous animals, especially those of the colder regions—has from time immemorial been utilised by mankind for winter clothing. The fur most prized is probably the sable. The best sable comes from East Siberia. In the hunting of this animal which has opened up so much of the geography of that wild country. The sable is quite a small animal, about 18 inches long, and wearing a lustrous coat of amber brown hair. In winter its fur becomes thicker, and the soles of its feet are also covered with hair. To avoid spoiling the fur, the hunters catch the sable in traps, and with nets thrown over its hole.

Common skins will fetch from £2 in the rough, but good dark ones will bring £30 to £40, and a robe of real sable such as Russian aristocrats wear may easily cost £1,000. The fur of Royalty is ermine; but to judge by recent fashions, "we are all born princes" if the wearing of the white fur, which was once the exclusive prerogative of sovereigns, has still anything to do with that matter. The ermine alive is not "very costly," and as its white winter coat, made into articles of apparel, or employed for the ornamentation of State robes, cannot be said to be more becoming than any other fur, it would be interesting to know how the ermine first came to be connected with, and adopted at, State functions. There are numerous other animals—the lynx, the beaver, the red fox, the squirrel, the seal, the bear, etc.—all of which contribute to our stock of furs. The north-western portion of the American continent is prolific in fur-bearing animals, and there the Hudson Bay Company, founded in 1670, has carried on a most profitable enterprise in pelt capture. The originator of the Vanderbilt fortune was a fur trader in the North-West. London, New York, Leipzig, and Nijni Novgorod are the chief fur marts of the world, the fairs at the two last-named places being very important. Fur trading has many hazards, not the least being that of fashion. It is an old saying that "furs when wanted are diamonds, when not wanted, charcoal."

Furlough, a term designating holiday-leave granted to non-commissioned officers and privates in the British Army, or home holiday-leave given to British officers serving abroad.

Fusel Oil is a resultant of alcohol, the residue left after the separation of ordinary alcohol from the raw spirit by fermentation. It has a strong odour and a fiery taste, and its consumption produces an injurious effect upon the brain.

Fusible-Plug, a safety-plug placed in the skin of a steam-boiler so as to be melted and allow of the discharge of the contents when a dangerously high temperature is attained.

Fusil, the old fire-lock which superseded the match-lock in our army, and was fitted with a flint and steel; it was about the length and calibre of the musket, but of lighter construction.

Fusiliers, were originally bodies of foot soldiers carrying fusils, at a time when archers and pikemen still formed the main part of an army. There is still a British regiment called the Royal Fusiliers.

Fustian, the name given at various times to different kinds of textile fabrics. Originally fustian was made of linen and cotton; later, wool was used; but in recent times the name has been mainly applied to a twilled cotton material with a nap surface.

Fustic, a kind of dyewood yielding various shades of yellow according to the mordants used. The tree grows in India, tropical America, and the West Indies.

Futurism. (See *Post Impressionism*.)

Fuz-ball, a genus of fungi, including the familiar *Lycoperdon Bovista*.

G

Gabardine, a long, loose, coarse, over-garment, worn by men of the common class in the Middle Ages, and prescribed by law as the distinctive garment of the Jew.

Gabbatha, the Hebrew term for that part of a judgment-hall which was occupied by the governor or supreme authority, and from which he pronounced sentence. Used in John xix., to designate the place where Pilate sat at Christ's trial.

Gabbro, a kind of euphotide diallage rock of many varieties, found in the marble regions of Tuscany, containing a good deal of felspar, and sometimes also serpentine or mica.

Gabbroisite, a mineral of foliated structure, mostly of a greyish colour, and of the appearance of scapolite. It is found in Norway.

Gaberlunzie, the name given to an old-time class of beggar in Scotland, who had licence to ply his "profession" within a prescribed district.

Gable, the triangular end of a building, rising above the cornice to its apex. The end wall of a sloping roofed house is called the gable-end; and a gable-window is a window situated in the gable or constructed in gable form.

Gabrielites, a sect of Anabaptists, founded by Gabriel Schelling, in Pomerania.

Gadfly, the name of a family of flies with only one pair of wings (*diptera*), possessing great power of flight. The females are very voracious, being able to bite through the skin and suck the blood of animals. The males are harmless. Gadflies are of many species and distributed over the world.

Gadolinite, a mineral named after Gadolin, a Finnish chemist, its discoverer. It is a silicate of the yttrium and cerium metals.

Gaelic, relating to the Gaels and their language, a term in modern days applied only to the Celtic people inhabiting the Highlands of Scotland, but formerly used also in regard to the Celts of Ireland and the Isle of Man.

Gag, a word of modern stage slang referring to dialogue or expressions other than the author's words, introduced into a play by an actor, and usually indulged in by comedians for raising a laugh.

Gahnite, a dark mineral substance of the spinel group, an oxide of zinc and alumina, or an admixture of zinc. Sometimes called zinc-spinel. Called after Gahn, a Swedish chemist.

Gaine, a sculptured figure, the upper part of which is in natural form and outline, and the lower part (except sometimes the feet) is some simple architectural feature seeming to envelop the body and legs. The gaine was often used in ancient Greek and Egyptian architecture.

Galactia, a stone found in Scotland, yielding, when moistened and rubbed, a milk-like juice.

Galago, a sort of lemur, native to Africa, large-eyed, in keeping with its nocturnal characteristics.

Galatians, St. Paul's Epistle to the, is supposed to have been written by the Apostle about A.D. 56. It was addressed to the Galatian Churches, and, in addition to supporting Paul's apostolic authority, advocated justification by faith.

Galaxy, the Milky way, the part of the heavens which, in Milton's words, is "powdered with stars."

Galena, sulphide of lead, and one of the commonest of minerals. One variety carries silver.

Galeries, a genus of *echinoderm*, or fossil sea-urchins, found in the chalk formation.

Galidia, a kind of ichneumon (*G. elegans*) peculiar to Madagascar, valuable for its fur, which in some varieties is beautifully striped; it is easily tamed, and serviceable as a destroyer of vermin.

Gall, a vegetable growth, the result of an egg-deposit on leaves or bark by a class of insects very widely distributed. As they appear on oaks they are called oak-apples. They are nearly spherical in form, inodorous, have a bitter taste, and vary in colour from blue to deep olive and black. They yield an acid which is of value for dyeing, tanning, and other commercial purposes.

Galloon, the name given to the old three-decked Spanish treasure vessels employed in conveying the precious minerals from the American colonies to Spain.

Galley, an air-propelled sea-boat used by the ancient Greeks and Romans for transport purposes, manned by slaves. Boats of a similar class were used by the French down to the middle of the 18th century, and manned by convicts.

Gallio Acid, obtained from gall nuts, sumach, tea, coffee, and the seeds of the mango, is used in the manufacture of inks and as an astringent in medicine. It is odourless, has a bitter taste, and is mostly of a pale yellow colour.

Galium, a malleable metal of a greyish-white colour, discovered in 1875 by J. E. Coen, the Belgian, in zinc-blende crystals in the Pyrenees, but only obtained in minute quantities. It is classed between aluminium and zinc.

Gall Moth, a species of insect, the larvae of which live in the stems of plants and produce gall-nodes.

Gallopardix, a kind of partridge, found in the hilly regions of India and Ceylon. There are three species.

Gallows, a wooden erection consisting of two posts supported by a cross-beam, suspended from which is a rope used for hanging criminals. Sometimes it takes the form of a single projecting wooden beam, which serves to carry the rope.

Galvanised Iron is iron coated with zinc and other substances, but in no form galvanised, therefore wrongly named.

Galvanism is the branch of electricity which deals with electric currents produced by chemical action, and named after its discoverer, Aloysius Galvani.

Gambeson, a protective garment of leather or padded material, reaching from the neck to the knees, worn by soldiers prior to the introduction of plate-armour, and also, as a modified surcoat, beneath the hauberk.

Gamboge, a resinous gum obtained from certain trees in Siam, Cochinchina, Ceylon, and other hot countries, and much used for producing a yellow pigment, as well as a medicinal purgative, though too drastic to be used alone.

Game is the term applied to wild animals which are protected from indiscriminate slaughter by Game Laws.

In the United Kingdom game comprehends deer, hares, pheasants, partridges, grouse, black game, moor game, woodcocks, bustards, and certain other birds and animals of the chase. Game can only be killed (with few exceptions) by persons holding game licenses, which cost £3 a year. Occupiers of land and one other person authorised by them in each case are allowed to kill hares and rabbits on their land without license. Game cannot be sold except by a person holding a proper license. There is a "close time" prescribed for the different classes of game, during which period they cannot be legally killed or sold, and it is not lawful to kill game on a Sunday or Christmas Day. Grouse cannot be shot between December 11th and August 31st; partridges between February 2nd and August 31st; pheasants

between February 2nd and September 30th; and black game between December 11th and August 10th. In regard to foxes, stags, and others, custom and not Parliament prescribes a certain law which sportsmen are to adhere to. The fox-hunting season is from November 1st to April 1st; stag-hunting from August 15th to October 15th; and other hunting from April to September.

Gaming, or Gambling—i.e., staking money on the chances of a game—differs from betting in that it depends upon the result of a trial of skill or a turn of chance. Gambling has long since been illegal in Britain, and no public gaming houses have existed here since the early part of the 17th century. The only place in Europe where gaming is still carried on by the sanction of the law is at Monte Carlo. Nevertheless, in many semi-public places and at some clubs gambling is indulged in to a considerable extent. A gambling debt cannot be recovered at law, but is simply "a debt of honour."

Garnet is the musical scale of lines and spaces upon which are written the notes of music designated by the first seven letters of the alphabet.

Ganga, the pin-tailed sand-grouse, a handsome bird mostly found in North-Western Africa.

Gangue, a term applied to non-metallic minerals found in mineral veins and often called vein-stone. Quartz is the most prevalent of these vein-stones.

Gangway, a narrow passage running across the House of Commons, and dividing the seats on each side into two parts. Above this gangway, and nearer towards the chair, sit the principal members, Ministers and ex-Ministers, the former on the Speaker's right, the latter to his left. Below the gangway sit independent members.

Gannet, the name of a genus of birds of the pelican family. It is found in large numbers on the coast of Scotland, and having breeding stations in the Hebrides, St. Kilda, Ailsa Craig, and the Bass Rock. It is a bird of white plumage, and weighs about 7 lbs. Its common name is the Solan goose.

Garandin is a dye substance obtained from madder root by chemical treatment, but in recent times has been superseded by alizarin.

Garden Cities, have been established in various parts of the country with considerable promise of success. The first and most extensive of these was formed at Letchworth, near Hitchin, in 1869. It comprises nearly 4,000 acres, and is controlled by a company with a capital of £300,000, and shows a prosperous working community living and labouring under morally and physically healthy conditions. The idea is an adaptation to modern ideas of the model villages of certain industrial philanthropists such as Salt, Richardson, Cadbury, Lever, and others. The Hampstead Garden Suburb is a successful experiment in the same direction.

Gardener-Bird, a bird possessing many of the characteristics of the bower-bird, and found only in New Guinea.

Gargantua, the giant hero of Rabelais' satire, of immense eating and drinking capacity, symbolical of an antagonistic ideal of the greed of the Church.

Gargoyle, a projecting spout for carrying off water from the roof gutter of a building. It is only found in old structures, modern water-pipe systems having rendered them unnecessary. At first gargoyles were only plain spouts through which the water was discharged well away from the wall. Later, they were turned to architectural account and made to take all kinds of grotesque forms—grinning goblins, hideous monsters, dragons, and so forth. The effect of rows of these fantastic figures, projecting from some of the old ecclesiastical buildings, castles, etc., is often weird and strange.

Garibaldi, a kind of blouse-jacket formerly a good deal worn by women, and so styled because of its resemblance to the skirts worn by the Italian Patriot and his soldiers.

Garlic, a bulbous plant of the onion tribe, and a favourite condiment among the people of Southern Europe. It possesses a very strong odour and is used largely for medicinal purposes.

Garner, a granary, or store-house for corn.

Garnet is the name of a precious stone varying in colour, but mostly red. The finest garnets are of a blood-red and transparent.

Garnish, a person who has received legal notice not to pay away sequestered monies owing by him to a third party.

Garrison, a body of soldiery stationed in a fortified place to defend it against a foe, or to keep the surrounding population in subjection; also such a fort, manned with troops, guns, etc.

Garrot, the name of a species of wild duck, widely distributed over the Arctic regions, and a winter visitor to the northern parts of Britain. It is distinguished by having a large white spot in front of each eye on a dark ground.

Garrote, a method of strangulation adapted as capital punishment in Spain, and consisting of a collar which is compressed by a screw that causes death by piercing the spinal marrow. Garroting was also applied to a system of highway robbery common in England some years ago, the assailants seizing their victims from behind and by a sudden compression of the windpipe disabling them until the robbery was completed.

Garter, Order of the. Was established by Edward III in 1349 and is the premier order of knighthood in Great Britain, limited to the Sovereign, the Prince of Wales, and eight of George V's may be elected members, and twenty-five knight companions. Queen Alexandra is a Lady of the Order. The traditional story of the origin of this order is well known. Edward III is said to have picked up a garter dropped by the Countess of Salisbury at a ball, when his Majesty put it round his own knee with the remark "Honi soit qui mal y pense." The insignia of the order are blue and gold worn on the left leg below the knee, and the sustinents and badge, the latter are of great magnificence.

Gas is an elastic fluid substance, the molecules of which are in constant motion, and exerting pressure. Any gas can be reduced to the liquid form by increasing pressure and diminishing temperature. Hydrogen, oxygen, and nitrogen were formerly regarded as "fixed gases," but they have been liquefied. The definition of gases by Clerk Maxwell is as follows: "Gases are distinguished from other forms of matter, not only by their power of indefinite expansion, so as to fill any vessel, however large, and by the great effect which heat has in dilating them, but by the uniformity and simplicity of the laws which regulate their changes."

Gas from Coal for lighting purposes is obtained from bituminous coal, or from a mixture of such coal and cannel. Such a gas was produced and used for illuminating purposes by William Murdoch to the end of the 18th century in Birmingham, and about 1807 the illuminant was introduced in London, one suit of Pall Mall being lighted with it. After that it soon supplanted oil and candles for outdoor and indoor lighting, and is still, in spite of the advances of electric light, the most general illuminant, its power having been greatly increased in recent times by the incandescent burner.

Gas-Engine, invented in principle by a French workman over a hundred years ago, and greatly improved by Siemens, Crossley, and others, in more recent times. Its power is obtained by a mixture of gas and air, compressed, ignited, expanded and re-compressed. Heat is produced by gases of various kinds—coal gas, natural gas, petroleum, etc. At first, gas engines were only constructed of small size, but are now built of considerable magnitude and power, and effect a great saving of fuel.

Gastropacha, a genus of lepidopterous insects of the Bombycidae family, including the lapier moth.

Gastropoda, a family of Molluscs, which includes all such as possess a univalve shell—snails, whelks, limpets, etc.

Gastrostomy, the surgical operation of making an artificial opening into the stomach for the introduction of aliment in the case of obstruction or stricture.

Gate House, a structure built over and flanking a gateway, and common in ancient times at the more

important entrances of a city, castle, monastery, abbey, or college. The only example left in London is St. John's Gate-way, in Clerkenwell, but many still remain in the old continental cities, and some are of great architectural beauty.

Gate of Justice, in medieval times, was the place where a king, feudal lord, or judge sat to redress grievances and deal out justice. It was situated sometimes at the city gate, in front of the temple or other public place, and where no actual gate existed, the judgment seat was enclosed in a structure that suggested gates.

Gauchos are South Americans of Spanish descent, and of a wild and fearless disposition. They are mostly employed in the management of cattle, and are noted for their skill in the saddle, and for their lasso throwing. Their numbers grow less from year to year, and as the pampas comes more under modern European control their existence as a distinct class will gradually dwindle away.

Gauge, a standard dimension or measurement, applied in various branches of construction. Thus, in railways we have the standard distance of 4 feet 8½ inches between the rails, and this is the ordinary narrow gauge in most countries. In the United States the standard gauge is 6 feet. The old 7 feet gauge adopted by the Great Western Railway was abandoned some years ago. The gauge for Indian lines is 5 feet 6 inches. Narrow railway gauges of different standards are in use on very steep inclines in various countries. Other standard gauges are fixed in building, gun-boring, and other operations.

Gauls were inhabitants of ancient Gaul, the country which comprised what is now France, Belgium, and parts of the Netherlands, Switzerland, and Germany.

Gault, a blue clay deposit found in the upper cretaceous rocks, and of marine form.

Gauntlet, a glove of armour, worn in the 12th and 13th centuries as a sort of mitten, and attached to the sleeve of the hauberk. In the 14th century gauntlets were made of mail, and later of hammered steel with separated and jointed fingers.

Gautama, one of the names of Buddha.

Gauze, a thin, transparent material made of silk combined with cotton, linen, or hemp, and plain or figured. There are also gauzes of flannel, lace, ribbon, and wire.

Gavel, enough grain in the straw to form a sheaf, into which it is converted by binding.

Gavelkind, an old English custom of land tenure obtaining in Kent and a few other places in England, whereby on the death, intestate, of a property owner, his property is divided equally amongst his children and not according to the law of Primogeniture.

Gavial, the crocodile of the Ganges, feeding chiefly on fish, and not infrequently given to attack mankind; it reaches a great length when fully grown, exceeding 30 feet, and has very long thin jaws, sub-cylindrical and dilated at the end.

Gavay, a kind of wild ox about the size of an English bull. A native of western India, and easily domesticated. The Hindus hold it in great reverence, making use of its milk, but not subjecting it to labour.

Gaydang, a junk-like, Annamese vessel, with two or three masts and triangular sails, carrying cargo from Cambodia to the Gulf of Tonkin.

Gazelle, an animal of the antelope family, of small and delicate shape, with large eyes and short cylindrical horns. It is of a fawn colour, a native of North Africa and easily domesticated.

Gecko, the name of a family of lurid-hued lizards, common in the warm tropics. The male is of nocturnal habits and feed on insects, and though by some accounted venomous, they are harmless.

Geez, a Semitic or Arabic dialect, or language-variant, surviving in the ecclesiastical literature and speech of Abyssinia, and still spoken by some of the natives of the province of Tigre, but mostly superseded by the Amharic.

Geissler's Tubes are used for producing light by an electric discharge through rarefied gases. The tube is sealed, and the electric spark is transmitted by means of platinum connections at each end. Geissler, the inventor, was a native of Bonn.

Gelada, the name of an Abyssinian baboon, possessing a large mane and long tufted tail. It is of a dark brown colour, and is closely allied to *Hamadryas*.

Gelasma, an era introduced by and named after Gelal-u-Din, Sultan of Khorrassan, and commencing March 4th, 1099 A.D.

Gelatin, a transparent, tasteless, organic substance obtained from animal membranes, bones, tendons, etc., by boiling in water. It is of various kinds, according to the substances used in making it. Isinglass, the purest form of it, is made from air-bladders and other membranes of fish, while the coarser kind—glue—is made from hoofs, skin, hides, etc. Its constituents are carbon, hydrogen, oxygen, and nitrogen. Gelatine is of great utility, and applied to an immense variety of purposes, from the making of food jellies to substances for photography.

Gelsemium, a wild jasmine grown in the United States and bearing yellow flowers of convolvulus shape. A tincture prepared from the root of this plant is a valuable medicine in small doses, but in over doses produces paralysis of the respiratory muscles.

Gemini, one of the signs of the Zodiac lying east of Taurus and containing numerous stars, only two of which—Castor, the upper and brighter one, and Pollux the lower one—are visible to the naked eye. The stars are named after twin divinities of the classical mythology.

Gemsbok, a large South African antelope, with long straight horns and tufted tail. Light fawn in colour, it has a black streak across its face, and is very fleet of foot.

Gems are precious stones cut and polished for wearing as jewellery.

Gender is a sort of sexual distinction grammarians give to nouns or pronouns. Thus, in English, we have the masculine (male), feminine (female), and neuter (no sex) genders. The French language has only the masculine and feminine genders, rendering gender classification difficult and complicated. In modern Persian there is no gender distinction.

Genealogy, is the science of family descent, treating of ancestors and their descendants in various branches in the natural order of succession. Pedigrees of the principal families in Great Britain are recorded at Herald's College.

General, a military title next in rank to that of Field-Marshal, the highest officer in the army. Ranking below full General are Lieutenant-General, Major-General, and Brigadier-General.

Generation, the average lifetime of persons who live beyond infancy is reckoned at about thirty years. The average of all who are born does not amount to more than seventeen years.

Generation, Spontaneous. (See **Abiogenesis**.)

Genesis, the first book of the Pentateuch, which carries the Scriptural narrative from the Creation to the death of Joseph.

Genet, one of the smaller carnivorous animals about the size of a cat, but with longer tail, and spotted body. It is a native of Southern Europe, North Africa, and Western Asia, and is valued for its fine soft fur, and also for a perfume it produces.

Geneva Convention was a convention signed at the holding of a conference of representatives of the leading European powers in 1864, whereby the neutrality of ambulances, hospitals, sanitary officers, chaplains, and others engaged in succouring the sick and wounded was guaranteed. All persons employed in such service are required to wear a Geneva cross—red cross on a white ground—as a badge of office.

Genii, fabulous beings, regarded by the Arabs as between mankind and the angels, capable of becoming invisible at will, or assuming any shape.

Genite, an ancient sect of Jews spoken of by Purchas in his *Pilgrimage*, as claiming to be of the pure stock of Abraham, by reason of their not having "taken strange wives."

Genoulillares, ancient metal caps for covering the heads of armed men: an example may be seen on the Black Prince's monument in Canterbury Cathedral.

Genre, an art term used to describe a style of painting which deals with subjects of homely life, but also applied in France in connection with other kinds of paintings as *genre du paysage* (landscape painting), *genre historique* (historical painting), etc.

Gens, a group term used by the ancient Romans to designate the kindred or connections of any particular family, but only used in regard to the members of a noble family. The modern word clan most nearly corresponds with *gens*.

Genthite, a silicate of nickel and magnesium, found in stalcite formations in certain parts of Pennsylvania, and named after its discoverer, Dr. Genth.

Gentian, the name for a species of plants of the *Gentiana* genus. Gentian root is of great value in pharmacy, and from it a valuable bitter is made and used as a tonic.

Gentian Root, the dried root of the *Gentiana lutea*, much used in pharmacy as a tonic. The plant bears clusters of mostly blue flowers, and the most valuable species commercially are those of central and southern Europe.

Gentile, a term used in the Scriptures to designate any person who is not a Jew.

Gentleman-at-Arms, one of a company of military esquires forming the sovereign's bodyguard. They number in England some 40 gentlemen and 6 officers, and their duty is to attend the King on all special occasions. The Captain receives £1,500 a year, and each of the "gentlemen" £70 a year.

Genus, a term applied in biology to designate any kind, sort, or class of species.

Geodesy, the art of calculating the configuration and extent of the earth's surface, and determining exact geographical positions and directions, with variations of gravity, etc. In former times the term geodesy was applied to land-surveying in general.

Geogeny, the science of the earth's formation in its relation to the solar system, and of practically the same meaning as cosmogony.

Geography, the science which describes the earth's surface, its physical peculiarities, and the distribution of the various animals and plants upon it. It is usual to divide the subject into two main branches—physical geography, which deals with the composition of the earth's surface and the distribution of its living occupants, animate and inanimate; and political geography, which deals with the tribes, peoples, and governments of the earth.

Geology, the science which deals with the condition and structure of the earth, and the evidences afforded of ancient forms of life. The various periods and sub-periods of geological classification as at present defined are:—Primary, or Palæozoic; Secondary, or Mesozoic; Tertiary, or Cainozoic; and Post-tertiary.

Geometrical Progression is a term used to indicate numbers which increase or decrease at an equal ratio—as 3, 9, 27, or 27, 9, 3.

Geometry is the branch of mathematics which demonstrates the properties of figures, and the distances of points of space from each other by means of deduction. It is a science of reason from fundamental axioms, and was perfected by Euclid about 300 B.C. The books of Euclid contain a full elucidation of the science, though supplemented in modern times by Descartes, Newton, and Carnot.

George-Noble, a gold coin of the value of 6s. 8d., receiving its name from the St. George depicted on its obverse. First issued in the reign of Henry VIII.

German Silver, an alloy of copper, zinc, and nickel, and much used in the manufacture of tableware, such as spoons, forks, etc.

Germ Theory, the biological doctrine which holds that living matter cannot be generated from non-living matter, but must spring from germs or seeds. In medicine it demonstrates that zymotic diseases are due to the presence of bacterial germs.

Gesta Romanorum, a collection of stories published in the Middle Ages, and of unknown origin. It was greatly aided under contribution by our earlier writers, who found many romantic incidents and legends which they were able to turn to good account. The collection circulated over Europe, and is

believed to have been written by a monk, Pierre Bercheur, of the convent of St. Eloi, Paris.

Gestation, the carrying of young in animals during pregnancy, varies considerably in its length. In the case of an elephant, the period is at months; a camel, 20 months; a cat, 8 weeks; a horse, 10 weeks; a dog, 9 weeks; and a pig, 16 weeks. Hens "sit" for 27 days; geese, 30; swans, 42; turkeys, 28. A pigeon only "sits" 14 days.

Gethsemane was at the foot of the Mount of Olives; see *Pears' Dictionary of the World*.

Geysers, hot springs of volcanic origin, and action, are remarkable for the fact that they throw out huge streams of boiling water instead of lava as in the case of a volcano. The most famous geysers are those of Iceland which number over a hundred, the principal one having an opening 70 feet in diameter and discharging a column of water to a height of 200 feet. There are also geysers in the Yellowstone region of America, and some in New Zealand.

Ghat, a river landing-place or stairway, in India, above which there is usually a temple, or pagoda, and sometimes a space set apart for rest; "ghaut," another form of the word, means a mountain pass in the Mahratta tongue.

Ghee, a kind of butter much used in the East Indies and made from coagulated milk. It is a deep sweet for a long time when properly prepared.

Ghetto, the name given to the Jewish quarter in any city or town, but more especially applied to such quarters in Italy.

Ghost-Moth, an interesting nocturnal insect (*Hepialus humuli*), common in England, possessing in the male a white collar and known for its habit of hovering with a pendulum-like action in the twilight over a particular spot where the female is concealed.

Ghurkha, or Gurkha, are a native Indian military force of sturdy fighters, famous, brave and useful force. They are natives of Nepal.

Giambeaux, metal armour for the legs and shins, worn by the warriors of Richard I's reign.

Giants, men of abnormal stature and bulk, have been met with in all ages, but it may be doubted whether ever any actual race of giants has existed, except in mythological fable.

Gibbet, a kind of wooden gallows with a projecting arm, from which in former times criminals were hung in chains and left to decay.

Gibbon, the name of a long-armed ape, inhabiting the East Indian Archipelago mainly. It is without tail, and possesses the power of very rapid movement among the trees of the forests.

Gifford Lectures, on natural Religion, are restricted to the four Scotch Universities, and were established by Lord Gifford with a grant of £30,000 for the lectureships. The lecturers are selected from religious test of any kind.

Gilbertines were members of a religious order of monks and nuns founded by St. Gilbert in the 12th century, but did not spread beyond England. There were 25 Gilbertine monasteries at the time of the suppression of these institutions.

Gimp, a narrow trimming of worsted or silk cord, largely used for edging to gowns, draperies, etc.

Gimp-Machine, a narrow-warped loom designed to catch the wool and form loops or patterns, the gimp-cords of variant sizes being carried by independent needles or shuttles.

GIN, a well-known spirit distilled from malt or barley and flavoured with juniper-berries. The purest gin is that of the Holland variety, produced mainly at Schiedam. English gin is less pure, often containing flavouring substances that detract from the quality of the spirit. Gin is frequently recommended as beneficial in urinary troubles.

Ginger is obtained from a reed-like perennial plant grown in tropical countries. There are two varieties, black ginger and grey ginger. The former is obtained by peeling and drying the root, the latter by scalding and drying. Ginger is largely used as a condiment.

Gingham, an ordinary kind of cotton fabric, dyed, plain, or figured, which received its name from being originally manufactured in Guingamp in Brittany.

Ginseng, a plant whose forked root is greatly valued as a tonic and stimulant by the Chinese. The Manchurian variety is considered the best, and fetches a high price; it is a plant of an allied species grows in America, and its root is exported to China and sold as ginseng. In spite of the almost miraculous virtues ascribed to ginseng by the Chinese, it has really but little medicinal value.

Gipon (or Jupon), a tight-fitting vest or cassock; an old French term.

Gipsies are a nomadic race, supposed to be descended from some East Indian tribe. Their language, Romany, is certainly a Hindu dialect mixed with other tongues. They are spread over many parts of the world but are most common in Europe, having appeared in the Eastern portions of the Continent about the 14th century, finding their way to England at the beginning of the 16th century. They give evidence of their Eastern origin in their dark skins, large black eyes, black hair, and pearly white teeth. They are born wanderers, and pass from place to place following certain small occupations such as tinkering, basket-making, and the like, while some of the men are clever as horse-dealers, and some of the women pose as fortune-tellers. They do not seem to have any religious creed, nor are they regarded as particularly honest. In England gipsies are not very numerous at this day, the enclosure of land and stricter methods of dealing with vagrants having made it more difficult for them to find resting places.

Giraffe, the tallest of existent animals, reaching a height of from 18 to 20 feet when full grown. Its sloping back and elongated neck seem to be the natural evolution of an animal that has to feed on the branches of trees. It is a native of Africa, is of a light fawn colour marked with darker spots, and has a prehensile tongue.

Girandole, a branching chandelier, or swing-armed candelabrum.

Girasol, a mineral of the opal variety. Of a bluish-white colour, with a red reflection under a bright light.

Girondists, one of the prominent parties of the early period of the first French Revolution. They were Moderates, and up to 1792 were a strong party. Their first leaders were from the department of Gironde, hence their name. With the Reign of Terror their influence came to an end, Robespierre and his party overthrew them, most of them being sent to the guillotine.

Girton College, founded at Hitchin in 1859, and removed to Cambridge in 1873, is the leading English training college for women, accommodates about 150 students, whose educational course covers three years. The teaching includes nearly all the higher branches of education. The fees amount to £105 per annum.

Glacial Epoch was the period when northern Europe, including part of Britain, was covered with ice, strong geological testimony of the epoch being found in the many fossil remains which have been discovered, in the Tertiary formation, of animals such as only exist to-day in Arctic regions.

Glaciers form in the higher Alpine ranges, and are immense consolidated masses of snow, which are gradually impelled by their own force down the mountain sides until they reach a point where the temperature causes them to melt, and they run off in streams. From such glaciers the five great rivers, the Rhine, the Po, the Rhone, the Inn, and the Arge have their source. The longest of the Swiss Glaciers is the Gross Aletsch, which sometimes extends over ten miles. Some of the glaciers of the Himalayas are four times as long. The Muir in Alaska is of enormous magnitude, and that of Justeldals Brae in Norway is the largest in Europe.

Glacier-valley, a vale, the essential factor in the formation of which has been glacial-action.

Glacia, a sloping bank of fortification forming a parapet to the covered way, and serving to expose besiegers to the fire of fire.

Glade, an open space in a forest.

Gladiators were professional athletes and combatants in ancient Rome, contesting with each other or with wild beasts. At first they were drawn from

the slave and prisoner classes exclusively, but so much were the successful gladiators held in esteem that men came to make a profession of athletics, and gladiatorial training schools were established. When a gladiator was vanquished without being killed in combat, it was left with the spectators to decide his fate, death being voted by their hands, being held out with the thumb turned inward, and life by putting forth their hands with the thumb extended. Gladiatorial shows were the chief public displays in Rome from the 3rd century B.C. to the 4th century A.D.

Glands are secretory organs whereby certain natural matters, such as urine, milk, bile, saliva, sweat, tears, etc., are drawn from or distributed over the system. Such of the matters as undergo rapid glandular expulsion, as urine, etc., are termed *excretions*, while such as are utilised in promoting the performance of the functions of digestion or milk-production are called *secretions*. Glands are composed of numberless minute secreting cells, arranged in simple or compound vesicles. In man, the chief glands are the liver, the pancreas, kidneys, and salivary glands.

Glasgow University, founded by Pope Nicholas V in 1451, had a new charter granted to it in 1577 by James VI of Scotland, and in 1858 and 1889 was remodelled by the Universities (Scotland) Acts. It has usually over 2,000 students, including women.

Glass, a substance obtained from the fusion of a combination of silica with various bases, and is more or less transparent. There are numerous kinds of glass, but they group themselves under one or other of the following (classifications):—Flint glass or crystal, whose components are potash, silica, and oxide of lead; window glass, made from soda, lime, and silica; Bohemian glass, containing potash, lime, and silica; and bottle glass, composed of soda, lime, alumina, silica, and oxide of iron. Glass was made by the Phœnicians, and was familiar in ancient Egypt. The Egyptians introduced it into Rome. In the Middle Ages Venice was famed for its glass manufactures, but after the 17th century Bohemia acquired pre-eminence in the same style of the industry. Window glass was not used in this country until about the 7th century.

Glass-Snake.—What is so called is really a lizard, with a long, sinuous tail, which has the faculty of regrowth if broken off. It is an inhabitant of the Southern States of America, and attains a length of about a foot, and its main colouring is green, with black and yellow markings.

Glaucus is the curious kind of cray fish often called the Sea Lizard. It is without shell and has a soft body, with horny mouth and four tentacles. It is a native of the South Atlantic, and is not more than 1½ inches in length.

Glee, a musical composition for three or more voices without accompaniment. It is an essentially English composition and was much in vogue during the 18th and the first half of the 19th century. There are still numerous glee clubs, and many of the compositions of this class are of very high merit. The favourite glee writers have been Webbe, Boyce, Callicott, Bishop, Stevens, and Goss.

Glencoe, Massacre of, occurred on the 14th February, 1692, in the wild Glencoe pass at the head of Loch Etive. The victims were the Macdonald clan, who had been required to take the oath of allegiance to William III, but their papers having been treacherously kept, gave the Government agent, Captain Campbell, of Gleniloy, the excuse to kill the Macdonalds. They were torn from their beds in the early morning and murdered in the pass.

Glisson's Capsule, a sheath of areolar tissue surrounding the branches of the portal vein and the hepatic duct and artery; first pointed out in the 17th century by Prof. Frac. Glisson.

Globigerina, an ocean unicellular animalcule with a perforated shell, and occurring in certain parts of the Atlantic in such vast numbers as to form a bed of chalk ooze with their empty shells. The English chalk cliffs are survivals of prehistoric beds of Globigerina ooze.

Gloria in Excelsis ("Glory to God in the highest"), is the opening of the Latin hymn adapted

from Luke ii. 4, and the most prominent hymn of the ecclesiastical rites in the Christian liturgies.

Gloria Patri, the lesser Doxology, with which chants are generally concluded in the English Church service—"Glory be to the Father, and to the Son."

Gloriosa, a genus of gorgeous flowering climbers growing in the Himalayas and Senegambia, lanceolate of leaf, with clinging tendrils and large red or yellow bloom; is of the Tulipaceæ family.

Gloss, an explanatory statement or marginal note, often found in ancient manuscripts, and is sometimes more valuable than the text to which it refers.

Glaucosolite, a milk-white variety of halloysite, found in a siliceous Silurian rock in Georgia; translucent on fracture.

Glossic, the name given to a phonetic system or spelling introduced by Alexander J. Ellis, and based on rules of simple sound. It has not, however, been much used apart from printed material contained in Pictam's phonographic publications.

Glove-Money, an extraordinary reward paid to officers of courts, and fees given to clerks of assize and judges' attendants by a County Sheriff when no offenders were left for execution; the white gloves presented to justices when there is a maiden session are a survival of this old legal usage.

Gloves are coverings for the hand with a separate sheath for each finger, and are made of a great variety of materials. They were not in general use in England before the 13th century, and were not manufactured in this country until the next century. There was a London Glovers' Company in 1464.

Glow-Worm, a kind of beetle, possessing in the female the power of emitting a phosphorescent light underneath the extremity of the body. The male has the same power, but to a very limited extent; and has wings, while the female is wingless. The light of the glow-worm can be given forth by the insect at will.

Glucinum, or Beryllium, is a white metal prepared from beryl, and found also in the emerald and other rare minerals. Most of the salts of this metal have a sweet taste, hence the name.

Glucose is the name given to a group of sugars produced from cane-sugar, dextrose, starch, cellulose, etc., by the action of reagents. It also occurs in many plants, fruits, and honey. For brewing purposes glucose is prepared by the conversion of starch into sugar by sulphuric acid.

Glue, a glutinous substance obtained by boiling and chemically treating hides, hoofs, etc.

Gluten, the insoluble nitrogenous element in flour or wheat and other grains. It is a proteid substance, and is a mixture of gluten casein, gluten fibrin, mucin, and gliadin.

Glutton, or Wolverine, the biggest animal of the weasel order, inhabits the northernmost parts of Europe and America. In build it resembles the bear, and is rather larger than a badger. Its fur is of a brown-black hue, but coarse; the animal has great strength, and is remarkable for its voracity.

Glycerine, occurs in natural fats combined with fatty acids, and is obtained by decomposing those substances with alkalis or by super-heated steam. It is colourless, only and sweet, and is put to a variety of commercial uses, being widely utilised for medicaments, for lubricating purposes, and in the manufacture of nitro-glycerine.

Glyptodon, an extinct species of gigantic armadillo, fossil remains of which have been discovered in South America. It was some a foot long, carried a huge tortoise-like shell, and had fluted teeth.

Gnat, a two-winged insect of the Diptera order. The female possesses the power of biting and stinging. Its eggs are laid upon the surface of water, fastened together in boat form.

Gneiss, a metamorphic rock containing quartz, felspar, and mica, the same constituents as granite.

Gnomes, dwarf supernatural beings, popularly supposed to exercise protective powers over mines and minerals.

Gnosticism was an early Christian sect prominent from the 1st to the 6th century. They held that Christ was of divine origin, but they rejected the

literal interpretation of the Scriptures; contending that God was unknown and beyond man's comprehension, and that knowledge rather than faith was the passport to Heaven.

Gnu, an animal of the antelope family, combining the characteristics of the buffalo in its head and horns, the ass in its neck and mane, and the horse in its long and bushy tail. There are two species, the common and the brindled, and they are about the size of an ass. They abound in Africa and congregate in herds.

Goa Ball, a peculiar and powerful drug, scented with musk, and sold in India in egg-shaped masses. It is a favourite specific in cases of fever and certain skin diseases, but its precise composition is kept secret.

Goat-Moth, a large moth of the Zenzende family, common in Britain, evil-smelling, and very destructive in the larval stage to trees of the poplar and willow genus, into the wood of which the caterpillar bores during its three years' period of development.

Goats are horned ruminant quadrupeds, indigenous to the Eastern Hemisphere, but now domesticated in all parts of the world. Though allied to the sheep, they are a much harder and more active animal. The male has a tuft of hair under the chin. Many species, including those of Cashmere and Angora, are valuable for their hair, which is used for fine textile fabrics. The milk of the goat is nutritive and medicinal, and goat-skins are in good demand for leather for gloves, shoes, etc.

Goatsucker is the popular name of the night-jar, and the bird was so called from the now exploded tradition that it was in the habit of sucking goats. It is a regular summer visitor to this country, and lays its eggs on the ground.

Gobelin Tapestry was originated by a family of dyers named Gobelin in the 15th century in Paris. The Gobelin establishment, which produced this beautiful tapestry, made of silk and wool, or silk and cotton, and used for upholstery purposes, was taken over by the Government in 1662, and since then has been the French National factory for that class of fabric.

Goby, the name of a well-known and widely distributed fish, of many species, some of which are common along the British coasts. The ventral fins of the Black Goby form a hollow disc, whereby the fish can cling to the rocks or other external objects.

God is the term by which the idea of the one Supreme Being is expressed. The conceptions of God vary with different religions and different countries. Theism regards God as a personal being, and the author and ruler of the universe; Pantheism identifies God with the universe and not as a personal being.

Gog and Magog, two legendary British giants, supposed to be the last of the offspring of certain wicked daughters of the Emperor Dacian and a band of demons. Gog and Magog, the story goes, were brought captive to the London palace of Brutus, and there kept in chains. Effigies of these giants existed in the Guildhall prior to, and were destroyed in, the Great Fire. A fresh pair, 14 feet high, now in the Guildhall, were carved by Richard Saunders in 1702, and it was for a long time the custom to carry them round in the Lord Mayor's procession.

Gold, one of the precious metals, found more or less in all parts of the world, though only here and there in such quantities as will pay for its getting. We have evidence of its existence through the whole of the historical record from the days of the Phoenicians down to the present time. It can be traced in the story of the Pharaohs, King of Tyre, laden with the gold of Ophir; in the splendours of the reign of Sardanapalus; in the days of the greatness of Carthage and her hundred tributary cities; through the exploits of Columbus, the barbaric marchings of Cortez, and the conquering magnificence of Pizarro. It has been to man the strongest of all allurements. It was for gold that Alexander the Great despoiled Asia, that Scipio descended upon Carthage and Spain, that Cesar subdued Gaul, that Cortez robbed Mexico, that Pizarro pillaged Peru, and that the Portuguese swept over Brazil and Japan. The most remarkable discovery of gold was in California in 1848. The next in importance was the discovery of the Australian goldfields in 1851.

Victoria alone, in the first year of its gold-mining producing £16,000,000 worth. Among the more recently developed goldfields, are those of Colorado, the Klondyke and South Africa. The largest gold nugget was found in Australia. It weighed over 28 lbs. and was worth when melted about £10,000. In 1892 the value of the gold production of the world amounted to £17,300,000; in 1911 it was £5,738,000, the British Empire yielding considerably more than half the total quantity. For coinage purposes gold requires to be associated with an alloy, usually copper or silver, the fineness of the gold being estimated by the number of carats of gold in 24 carats of the alloy. The gold coinage of England is a mixture of 22 parts of gold and 2 parts of copper.

Gold-Beaters' Skin is the outside membrane of the large intestine of the ox, specially prepared, and used by gold-beaters for placing between the leaves of gold while they beat them. This membrane is of great tenacity, and gets beaten to such extreme thinness that it is used to put on cuts and bruises.

Golden Age of the classical mythology was the age of peace and innocence and patriarchal years.

Golden Bull was the name given to the famous edict issued by the Emperor Charles IV in 1356, proclaiming the order of procedure for the election and crowning of his successors.

Golden Legend, the title of a famous history of the Saints, compiled by Jacobus de Voragine, a Dominican Monk, in the 13th century, translated and published by Caxton in 1480.

Golden Number, the number of any year in the meteoric cycle of 19 years, deriving its name from the fact that in the old calendars it was always printed in gold. It is found by adding 1 to the number of the year A.D. and dividing by 19, the result being the Golden Number; or, if no remainder, the Golden Number is 19. Thus: $1920 \div 19 = 101$. $1921 \div 19 = 101$, with 11 over, the Golden Number. The only use to which the Golden Number is put now is making ecclesiastical calculations for determining movable feasts.

Golden Rose, the Pope's rose of wrought gold blessed and sent from time to time to the church or community his Holiness selects to honour.

Goldsmiths' Company, one of the richest of the London City Companies, dating from 1130, and the official assayers of gold and silver, invested with the power of "hall-marking" the quality of objects made from these metals. Total income, £58,000.

Gondola, the old regulation black boats so common on the canals of Venice, propelled by a gondolier with one oar who stands at the stern, his passengers being accommodated in a covered space in the centre.

Gonfalon, the pennon affixed to a lance, spear, or standard, consisting usually of two or three streamers, and made to turn like a weathercock.

Good Templars, a temperance organization established in England in 1868, but existing some years earlier in America. It has a very extensive membership in this country, and its headquarters are at Birmingham.

Gordon Riots were caused by an anti-popey agitation fomented by Lord George Gordon, who along with a mob of 50,000 persons marched to the House of Commons to present a petition, the people afterwards proceeding to destroy much valuable property. The riots were suppressed by the military.

Gorilla, the largest of the anthropoid apes, found in the forests of Equatorial Africa, and at maturity standing from 4 to 5 feet high.

Goshawk, or *goshawk*, a bird of prey of the falcon family. Being rather slow and weak in flight, it is trained by falconers for catching hares, rabbits, etc. It is only occasionally seen wild in Britain, but is common in Southern Europe and Asia.

Gospels are those portions of the New Testament which deal with the life, death, resurrection, and teachings of Christ. They are the gospels of Matthew, Mark, Luke, and John, and the first three are called the *synoptic gospels* because of their general unity of narrative. That of John is of somewhat wider scope, and gives in addition to the story of the Passion, an account of the ministry in Judea.

Numerous other so-called Gospels were put forward, but they are regarded as apocryphal.

Gothenburg System, a method of controlling the sale of intoxicants originally adopted at Gothenburg, and since tried in Norway, Sweden, and other places with some success. It restricts the sale to houses appointed by the State, appoints companies to manage them at a fixed rate of interest, and applies the surplus profits to public objects.

Goths, a Teutonic people whose descent on Central Europe from Baltic regions and ultimate domination of a great part of the Continent had a widespread historic influence in the 4th and 5th centuries. Under the leadership of Alaric (and then known as the Visigoths) they conquered both Greece and Rome in 476, but by the 8th century they became merged in the Spanish race.

Gowrie Conspiracy was a project for securing the person of, or assassinating, James VI of Scotland, afterwards James I of England, and implicated the Ruthvens and other of the Scottish Protestant nobility. The frustration of the plot gave James the excuse for throwing over the Presbyterians and co-operating with the Bishops.

Grail. (See *Holy Grail*.)

Gramme, the unit of weight in the metric system, being formulated as the 1,000th part of a certain piece of platinum called the "Kilogramme des Archives" preserved in Paris. It is equal to about 15 1/16 grains Troy. The further division of the gramme gives the centigramme (100th part), decigramme (1-10th), decagramme (10 grammes), etc. (See *Metric System*.)

Gramophone, an apparatus on the disc principle for recording and reproducing vocal sounds, invented by E. Berliner, and one of the most popular of the talking machines.

Grampus, a Cetacean of the Dolphin family frequent in temperate waters, and at maturity being over 20 feet long.

Grand Prix, the "French Derby," was established by Napoleon III in 1863. It is the chief French race and is an international competition of three-year-olds.

Graphite, or plumbago, commonly called black-lead, is a carbon substance occurring in foliated masses in limestone, granite, etc. It is soft, will make black marks on paper or other plain surfaces, and is mainly used for lead pencils. The best graphite comes from Siberia.

Graphophone, a disc sound-recording and reproducing machine, different in construction from the phonograph, but producing results of a like kind.

Graphotype, a kind of block for printing from, the drawings for which are made on a chalk surface with a silicious ink. The soft parts are brushed away after the surface is dry, and a block is made from what remains in relief.

Grapple, a modified kind of boat's anchor, with flukes for holding by. Also an arrangement of hooks or clamps for fixing to any holding one ship to another while being boarded in an engagement.

Grass-Cloth, a fabric made from China grass, the fibre of certain plants of the nettle order.

Grasses form the general verdurous covering or herbage of the fields, and include a wide variety of plants. Ordinarily the term is applied to pasture plants on which cattle and other animals feed, but in its broader application also takes in the various cereal plants, such as wheat, barley, oats, rice, etc.

Grasshopper, a well-known insect, whose third or hind pair of legs are constructed to enable it to make progression by leaps. There are many species, most of which are of the locust order. The male grasshopper makes a shrill sound as he leaps.

Gravitation is the natural attraction of bodies of matter to the centre of the earth, the principle having been set forth by Newton in 1687.

Gravity Railway is a railway worked by the power of gravity alone. The road is constructed on inclined planes, usually so arranged that descending cars pull the cars from below to the higher level.

Graying, the ordinary wild gray goose of Europe, and so called from the fact that at one time it did not

migrate with the old wild geese, but lagged behind in the fens and marshes.

Grayling, a fresh-water fish of the salmon family, having a large dorsal fin, and averaging about 1 lb. in weight. It affords good sport to the angler, and feeds mainly on flies.

Grease, animal fat in a soft condition, used partly for lubricating purposes, and as an emollient. It assumes many forms, and is derived from many sources.

Great Circle Sailing is the art of steering a ship in a line with a straight diameter of the earth.

"Great Eastern," the ship built by Scott Russell at Millwall and launched in 1858, and then by far the largest vessel afloat, measuring 601 feet in length and 65 feet in breadth, and of 22,800 tonnage. It was long regarded as practically useless for ordinary ocean traffic, and, after being used for Atlantic cable laying, was ultimately sold to be broken up.

Great Powers, the six European countries to which this term applies are Great Britain, France, Germany, Austria, Russia, and Italy.

Grebe, a diving bird of beautiful plumage, of which there are some 20 species. The two species familiar in this country are the Dalmatian and the Great Crested Grebe, the latter having a feathery tuft on each side of the head. The breast feathers are of a downy softness, and silver lustre.

Greek Church represents the churches in accord with the Greek patriarchal see of Constantinople, and marks the point of separation from the Roman Catholic Church, which occurred in 1554 A.D., when Pope Leo IX. excommunicated the patriarch and the countries comprised in Greek, Greco-Roman, Russian, and certain Oriental groups remained faithful to the Patriarchal cause. The Greek Church accepts the doctrine of transubstantiation, believes in the intercession of the Virgin and saints, and the power of priestly absolution, but rejects purgatory, Papal supremacy, and the worship of images. It also allows its priests to marry. It has over 80,000,000 adherents, nearly two-thirds being Russians.

Greek Fire, a combustible, supposed to have been composed of sulphur, nitre, naphtha and asphalt, used with destructive effect by the Greeks of the Eastern Empire in their wars. The secret of its composition was preserved for hundreds of years, but, when Constantinople was conquered, was discovered by the Mahomedans. The Saracens employed it against the Christians during the Crusades, and it was so powerful that it would burn under water.

Greek Kalends, equivalent to never, as only the Romans, not the Greeks, had kalends.

Greenovite, a kind of titanite found at St. Marcel in Piedmont. It is of a manganian variety, and is rose-red in colour. Its name is derived from its discoverer, Mr. C. B. Greenough, the geologist.

Green Robe, the common name for the robe worn for actors and actresses, behind the stage, so called from the first rooms of the kind being decorated in green.

Gregorian Song, a name applied to the ritual music as established by Pope Gregory I. Gregorian music requires a more rigid harmony than can be given in the modern system, and is peculiarly appropriate for church use.

Grenade, an explosive shell which was thrown by hand or with a shovel. Grenades were made of various materials—wood, glass, gun-metal, bronze, etc.—and were in use in the 17th century. Modern grenades are of spherical shape, and usually cast in cast iron.

Grenadier was originally a picked soldier, employed in throwing hand grenades. The Grenadier Guards regiment perpetuates the now obsolete usage in connection with our own army.

Greyhound, one of the oldest known varieties of dog, bred for the chase, and of great fleetness. It is a large, slenderly built animal, and pursues by sight, not scent, being kept for hare-coursing chiefly. Among its sub-varieties are the Scotch deerhound, the Irish borzoi, and the Russian wolfhound.

Griffin, the name given to a claw-like architectural decoration common in mediæval buildings, and placed at the base of columns.

Griffin, an imaginary monster, half eagle, half lion, a figure familiar in heraldry, legend, and architectural decoration.

Grille, a metal-work covering in the form of decorative bars, used to protect apertures in walls or doors.

Grilse, a young salmon, at that period of its development when the fish makes its first return to fresh water, usually in its second year.

Grimmel, a sub-order of apocarpous mosses; *Grimmia pulvinatum*, the Swan's Neck Bryum, is the typical genus.

Grimm's Law, formulated by Jacob Grimm, an eminent German philologist, lays down a principle of consonantal interchange in the Aryan languages, establishing a mnemonic rule whereby a consistent classification can be applied.

Grindery, the materials employed by shoemakers and other workers in leather in their craft.

Grindstone, a wheel of sandstone, employed in smoothing surfaces, and grinding and sharpening tools; it may be worked by treadle or machinery. The millstones used for grinding corn are also called grindstones.

Grisette, the name given in France to young women who serve in shops and elsewhere, and are not specially bound by domestic ties.

Groat, an old English silver coin of the value of $\frac{1}{4}$ d. It was first issued in the reign of Edward III, but after 1602 only coined as Maundy money. The fourpenny piece was resumed, though not under the old name, in 1836, but in recent years has dropped out of the coinage.

Groats (or grits) are the grain of oats deprived of the husks; and, crushed, become whole meal.

Grog, the beverage served out to sailors, and compounded of spirit and water in prescribed proportions. The name, it is said, was derived from the fact that Admiral Vernon who introduced it into the English navy in 1745, wore Groggman breeches. Now, any sort of mixed drink is called "grog."

Program, a kind of rough fabric made of wool and some other fibre, such as silk, mohair, or cotton, formerly much used for commoner kinds of wearing apparel.

Groschen, a small silver coin introduced into the German currency about the 14th century and still in use. It is a thirtieth of a thaler, or about $\frac{1}{12}$ of a penny, English.

Grotto, a natural or artificial cave. Some grottoes are of great beauty, and are much frequented. The most famous are those of Capri, del Cane, and of Antiparos. The latter is covered with stalactite formations of singular picture-queeness.

Grouse, a kind of game-bird common to the moors of England and Scotland. Of the same family are the ptarmigan of Scotland, the capercaillie, also found in Scotland, the Canada grouse, the American prairie hen, and the common partridge. Grouse shooting begins in Britain on the 1st August.

Grub Street, the London city quarter of hack writers during the Georgian period, and frequently alluded to in the literature of those days. To-day it is called Milton Street.

"Grundy, Mrs." a sort of Mrs. Harris, introduced by Dame Ashfield, a character in Morton's comedy "Speed the Plough." The Dame considers every action from the point of view of Mrs. Grundy (a personification of British respectability), and is continually putting the question, "What will Mrs Grundy say?" Thus the name became proverbial.

Gruyère, a special kind of cheese, first peculiar to the small town of that name in the canton of Freiburg, Switzerland, but now made in other parts of Switzerland and in France. It is of a pale yellow colour, and contains air passages and bubbles which give it a rather honeycombed appearance.

Guanaco, a large species of llama, common to South America, and utilised as a beast of burden.

Guano, the excrement of sea-birds, found in the largest quantities on the rocky islands of the western coasts of South America. It forms a useful fertilising agent, and first came into use in 1821, since which time Peruvian guano has been a recognised article of commerce. Beds of guano of from 50 to 60 feet in

thickness are not uncommon. Fish guano and bat guano from caves in South America and the Bahamas are also of modern fertilisers.

Guardian, one who has the care of the person or property of another, or (as Guardian of the Poor) is one of a body entrusted with the administration of the poor law system.

Guards in the British Army comprise three regiments of cavalry, and four foot regiments. The cavalry regiments are the 1st and 2nd Life Guards, and the Royal Horse Guards; the infantry guards are the Grenadiers, the Coldstreams, the Scots Guards, and the Irish Guards.

Gudgeon, a small fresh-water fish of the carp family, easily caught by reason of its voracity, and much used as bait.

Guelphs, the name of a powerful German family of the Middle Ages, for a long time in conflict with the Ghibellines. The Guelphs were founders of the royal houses of Brunswick and Hanover, and therefore ancestral to the present royal family of England.

Guinea, a large and remarkable African monkey, *Colobus guinea*, with long flowing masses of white hair and tufted tail.

Guildhall, the place of assembly of the members of a guild, and at one time, when guilds were in full strength, was practically the Town Hall. The London Guildhall is to-day the hall of meeting for the City of London Corporation.

Guilds for the fostering and protection of various trades have existed in England since Anglo-Saxon times, and from the 14th to the 18th centuries, during which period they greatly developed, exercised great influence and enjoyed many privileges. There were trades' guilds and craftsmen's guilds, and in all large cities and towns there was a guild hall. Many guilds still exist and enjoy considerable revenues, but they are now but private bodies and have little direct influence upon the course of trade. Their successes in the Middle Ages led to many monopolistic abuses, and in the end it became necessary to free the country from their restrictive power.

Guillemot, a genus of sea-birds of the auk family, common in Northern Europe, two species—the Common Guillemot and the Black Guillemot—being natives of our own sea coasts, nesting and breeding on the cliffs.

Guiltotine, the apparatus used in France for the punishment of death. It consists of an oblique-edged knife, fixed between two grooved posts, and being heavily weighted, falls forcibly on the neck of the victim, severing head from body. The machine, which is a modification of a beheading machine used in various countries in the Middle Ages, was named after Doctor Guillotine, on whose proposition, in the French National Assembly of 1793, such a method of execution was adopted. Dr. Guillotine was not the actual inventor of the machine, nor did he, himself, as is popularly supposed, suffer death by its agency.

Guinea, an English gold coin of the value of twenty-one shillings, current from 1663 to 1817, and deriving its name from the first guinea coinage being struck from gold obtained on the coast of Guinea. Spade guineas, with the royal arms engraved on a spade-like shield, belong to the reign of George III.

Guinea Pig, a small animal of the cavy order, a native of South America, of various colours, and very prolific. It is often kept as a pet, but does not display much intelligence. How it got its popular name is a mystery, since it did not come from Guinea, nor is it a pig.

Guitar, a six-stringed musical instrument of the lute order. Spain seems to have been its country of origin, and it is still popular there, in Italy and France, and has also a certain vogue, and was once much heard in England in song accompaniments. It has a range of from 3 to 4 octaves.

Gulden, a former gold coin of Germany, the Low Countries, and a former silver coin of Austria, worth about 1s. 8d. English. The silver gulden is still current in Holland.

Gules, a heraldic term, denoting a rose or red tincture, indicated by vertical lines drawn or engraved without colour.

Gulf Stream is commonly supposed to have an important influence upon the climate of the British Isles and North Western Europe generally, but in recent years scientific geographers have shown that the belief has no foundation in fact. The Gulf stream cannot be distinguished from the rest of the Atlantic anywhere east of Newfoundland, so that it disappears long before it reaches our shores. The stream is, in fact, only an incidental part of a great system of circulation of the surface waters of the North Atlantic, and the drift of water from North America to Europe is caused entirely by prevailing winds. These most south-westerly winds possibly derive some heat from the great mass of Atlantic water which they keep in circulation, but in the main the warmth is due to the fact that the wind itself comes from warmer regions. If the Gulf stream were diverted at the Straits of Florida we should not experience the slightest change of climate, for the warm wet south-west winds would still ameliorate the temperature of our Islands.

Gulls, a web-footed sea-bird of numerous species, inhabiting the sea coasts of all parts of the world. They are mostly of a soft greyish-white plumage, and are voracious feeders, living on fish, eggs, small birds, worms, etc. Eight or ten species are native to the British Isles.

Gulliver, the hero of Swift's satire, *Gulliver's Travels*, who, in Lilliput and Brobdingnag, passed through a series of adventures which were so contrived as to reflect the humours, follies, and shortcomings of Swift's day. Apart from its satire, it forms one of the best books for boys ever written.

Gums are glutinous compounds obtained from vegetable sources, soluble in cold or hot water, but not in alcohol. There are innumerable varieties. Gum Arabic is exuded from a species of acacia grown in Senegal, the Sudan, Arabia, India and other countries, and is a valuable commercial product, used in dyeing, ink-making, as a mucilage, and in medicine. India-rubber is an elastic gum. Gums are also made from starch, potatoes, wheat, etc., from seeds, bark, roots, and weeds. Many so-called gums are resins.

Gun-Cotton, a powerful explosive manufactured by subjecting a prepared cotton to the prolonged action of a mixture of three parts sulphuric acid and one part of nitric acid. It burns without explosion on ignition, but by percussion explodes with a force five times greater than that of gunpowder.

Gun-Money, the name given to the money coined by James II. as "sinews of war," on his attempts, in 1689 and 1700, to recover his lost kingdom. The coins were mostly made from brass cannon and kitchen utensils, and were of the nominal value of 6d., 1s., 2s. 6d. and 5s. respectively.

Gunny, a coarse cloth made in India from jute and hemp, used chiefly for bags and sacking, though sometimes also for clothing by the very poor. Gunny cloth is largely manufactured in Dundee.

Gunpowder, the oldest of the explosive materials, a compound of saltpetre, sulphur, and charcoal thoroughly amalgamated and reduced to fine powder. The proportion of the ingredients is varied according to the uses for which it is destined. In recent years a smokeless gunpowder has been much used, an oxidising agent being used to prevent the smoke. Cordite is a familiar example.

Gunpowder Plot was the conspiracy entered upon by a desperate band of Roman Catholics, in the reign of James I., to avenge the harsh treatment which the Catholics were subjected to those days. Barrels of gunpowder were secreted in the vaults underneath the Houses of Parliament, and it was proposed to fire these when the King and his Ministers assembled on the 5th November, 1605. A letter of warning to Lord Montague led to the discovery of the plot, and Guy Fawkes and his co-conspirators were arrested, and executed.

Guns comprise muskets, carbines, rifles, cannons, etc., in a never-ending variety. In the 14th century they were simply tubes by means of which stones were thrown at an enemy. Then gunpowder came into use, and a metallic tube which could be carried

in the hand was utilised for firing and directing the shot; and so the development proceeded, improved forms of guns being introduced from time to time, until from small arms the advance was made to cannons, and machines of immense power came to be adopted. Among the leading modern inventors of guns may be mentioned the following: Lord Armstrong, who in 1855 invented the wrought-iron, breech-loading gun of small and large calibre; Major Palliser, who was responsible for the tubed gun, adopted in the British army about 1870; Krupp with his powerful steel guns for the German army; and Whitworth's rifled firearms. Of the machine guns the best known are those of Maxim, Gardner, Gatling, Hotchkiss and Nordenfeli.

Gunter's Chain, a surveyor's chain invented by Edmund Gunter to facilitate the admeasurement of areas. It possesses 100 links, and is 22 yards long, each link representing $7\frac{1}{2}$ inches.

Gurnard, a sea-fish, with large, bony head and diminutive body, of which there are some forty species. They are plentiful in British waters. The flying fish of the Mediterranean is of the gurnard family, but the so-called Armed Gurnard, noted for its spiky coating, is of the Cataphrati family.

Gutta Serena, the tree-juice of an evergreen tree common in the Peninsula and Islands of Malay. It possesses normally and naturally little elasticity, but becomes pliant under a rising temperature and has many commercial uses. Though tough and hard at ordinary temperatures, it gradually softens as it is subjected to heat, but when very hot develops a stickiness rendering it difficult of manipulation. In recent times it has become of considerable value as a covering for electric wires, being a non-conductor, while it is largely employed in making hose, belting, and other flexible goods. Combined with the more elastic caoutchouc it is easily vulcanised.

Guy's Hospital, founded by Thomas Guy in London in 1725 is one of the most important institutions of the kind. It has an income from endowment of £95,000; but its expenses are vastly beyond that, and the hospital relies largely on voluntary subscriptions for its great work.

Gybing, in navigation, means the moving of any boom sail from one side of a mast to the other.

Gymnasium, originally a Greek institution, and forming a part of the general education equipment. It was also adopted by the Romans to some extent, and in modern times, especially in England, has been largely used. In ancient Greece the term Gymnasium came to be specially associated with higher teaching, as is now the case in Germany.

Gymnastics, the general term for athletic diversions when performed not as sports or games, but as disciplinary or health-promoting exercises.

Gynæceum, the nursery or apartments of the females in the interior of a dwelling house; a term in Greek architecture.

Gypsoplaster, a cast taken in white lime or plaster of Paris.

Gypsum, a whitish mineral consisting of sulphate of calcium. Some varieties are of a brown-red tint. Ground to a powder, it forms a manure; heated to 400°, it becomes fired from the water it contains, and resolves itself into the powder called plaster of Paris. The finest grained variety of gypsum is alabaster.

Gymnancy, divination by walking in circles, was one of the ancient superstitions. The person for whose benefit the art was invoked walked round and round in a circle (about which certain signs had previously been placed) until he fell from giddiness. From the manner of his fall in relation to the signs, the interpretation was formulated.

Habeas Corpus, the name given to a writ ordering the body of a person under restraint or imprisonment to be brought in court for full inquiry into the legality of the restraint to be made. The first Habeas Corpus Act was passed in 1679, though nominally such a right had existed from Magna

Charta, but some of the more despotic kings had disregarded it. In times of public peril the privilege of *habeas corpus* is sometimes temporarily suspended, many instances occurring in the recent history of Ireland.

Habendum, the name applied to the special clause of a deed of conveyance which specifically sets forth the estate or interest which the grantee is "to have and to hold."

Habrocoma, a genus of South American rodents, possessing four toes to each fore foot, having large ears, and a fur, soft chinchilla-like fur.

Hacking-Machine, an apparatus employed in removing burrs and other foreign substances from raw flax prior to spinning. It consists of a pair of rollers covered with brushes and hackles.

Haddock, one of the best-known fishes, abounding in northern seas and averaging about 4 lbs in weight. Largely used for curing, and sold as "finnan haddies."

Hade of veins, a mining term indicating the particular inclination that any vein, seam, or strata may have from the perpendicular - thus, in Weardale the veins mainly "hade" to the north.

Hadj, a title given to any Mussulman who has made the pilgrimage to Mecca. A green turban is the distinctive headgear of the Hadj.

Hæmatite, peroxide of iron, one of the principal ores, containing about 70 per cent. of the metal. It is usually found in kidney-shaped masses, and is specular, red or brown, in thin fragments, but greyish in bulk.

Hafiz, besides being the name of a famous Persian poet, is a title conferred upon any Mahomedan who has committed the whole of the Koran to memory.

Hag-fish, a parasite sea-fish about a foot long, of eel-like type, with soft backbone and eel-like form; found within the bodies of other fish, and called sometimes the "borer," or "the glutinous hag-fish."

Hagiarchy, a form of government composed of priests and devoted to sacred things.

Hagiographa, the "Holy Writings" of the Jewish Scriptures, and comprising the Chronicles, the Psalms, Proverbs, Song of Solomon, Ecclesiastes, Job, Ruth, Lamentations, Esther, Daniel, Ezra, and Nehemiah.

Hagiology, a branch of literature that is wholly given to the history of the saints, and the setting forth of the stories and legends associated with their names.

Hail, frozen rain drops or hailstones, are composed of ice and snow, and vary in shape according to the producing conditions, although most commonly conical. It is on record that hailstones weighing over half a pound have occasionally fallen. Hail is often an accompaniment of a thunderstorm. Hailstorms do much damage to vines, fruit, and agricultural produce, and many societies exist on the Continent for hail protection, the method of procedure being to keep up a discharge of artillery at threatening periods, which usually has the effect of dispersing or warding off the hail.

Halesbury College, in Hertfordshire, originally established in 1809 for the education of boys for service under the East India Company. Since 1866 it has been a public school, receiving its charter in 1864.

Hair, a more or less fine capillary covering forming on the skin of animals generally, in many instances covering the entire body, but in human beings having its chief development on the head. Human hair grows longest on the heads of women. Ordinarily, the structure of a hair comprises a root, a stem or shaft, and a point. The root, which is bulbous, is enclosed in a skin follicle, connected with which are sebaceous glands whose secretion feeds and imparts gloss to the hair. Hair bears a colouring pigment, black, brown, flaxen, or red, and when the pigment begins to fail in its supply the hair loses its colour and turns grey. Males have usually a distinctive hair formation, as in man the beard.

Hake, a fish of the cod family, found in large numbers in the seas of Europe, but not in high favour for the table with fastidious feeders.

Halbard, a kind of spear much used as a military weapon in feudal times. Its blade was sharp-edged, and it bore an axe or projecting knife a few inches

from the point. Halberdiers often formed the body-guard of kings and nobles.

Halcyon, a term associated in olden times with the kingfisher and days of soothing calm, "halcyon days" being a frequently used expression. The legend was that the kingfisher laid its eggs on the sea at a time of perfect stillness.

Haldanites, a small religious sect established about a century ago by James and Robert Haldane in many parts of Scotland, but the divergence of doctrine from the orthodox Christian teaching was so small that the Haldanites in time became affiliated with other denominations.

Half-pay, pay allowed to naval or military officers retired from active service, but liable to be called upon for active duties in an emergency.

Halibut, one of the largest of the flat fishes, averaging when full grown from 4 to 6 feet in length, and highly esteemed for the table. Specimens of still larger size occasionally occur. It is plentifully distributed. Its two eyes are on the right side of the head.

Hallidon Hill, the spot upon which Edward III. won the victory over the Scots in 1333, which enabled him to obtain possession of Berwick.

Haliotidæ, a genus of sea shells to which the term ear-shells is commonly applied by reason of their shape; largely used as ornaments and for inlaying. Some species are found on the British coasts, but the best kinds are tropical. The inmates of these shells are edible.

Hallowe'en (October 31st), the eve of All Saints' Day, a time associated, especially in Scotland, with certain pleasing superstitions attractively set forth in Burns's famous poem "Hallowe'en." It is the night when young men and maidens are supposed, by observing certain rites, to have their future wives and husbands disclosed to them.

HALO, a lustrous circle surrounding the sun or moon, and due to the refraction of the light by ice-crystals in the highest atmosphere. Small halos are termed coronæ. Solar halos are rainbow-hued, lunar halos are mostly colourless.

Halogens is a general scientific term applied to the four combinable non-metallic elements, chlorine, bromine, iodine and fluorine. Cyanogen is also a compound halogen.

Malice, a family of flea beetles, which include the turnip flea, the cucumber flea, and the cabbage flea. They are very small but destructive.

Halwa, a Cornish mining term, signifying refuse ore.

Hammock, a hanging bed, net, or canvas for resting or sleeping upon. In tropical countries hammocks are in general use, also in summer time in colder countries, while on shipboard they are very largely resorted to, especially in hot climates.

Hampton Court Conference, called together and presided over at Hampton Court Palace by James I. In 1604, had an important bearing on the religious differences of the time. Prominent representatives of both the Church and the Puritan parties were present, and amongst other things that this Conference brought about was King James's authorised translation of the Bible.

Hamster, a kind of burrowing rodent, about the size of a rat, an inhabitant of Northern Europe and Asia. Remarkable for its cheek pouches, in which it stores food. Its fur is of considerable commercial value.

Hanaper Office, a former Chancery office, deriving its name from the fact that such of its writs as referred to public matters were kept in a hanaper (bag), while those relating to the Crown were kept in a small bag. The custodian was named Clerk of the Hanaper. The office was abolished in 1792.

Hand, a measure of four inches, the average size of the palm; a term used in reckoning height of horses.

Handfasting, an informal marriage custom once prevalent in Scotland, whereby a man and woman bound themselves to cohabit for a year and a day, and at the end of that period either confirmed their contract by a regular marriage or separated.

Hand Grenade, an iron shell charged with gunpowder, fired by means of a fuse, and thrown by hand. In the early days of explosive warfare the hand grenade was greatly used, and even now there

are times when it can be employed with effect. Filled with certain chemicals, the grenade is provided for use in fire-extinguishing.

Handicap, in horse-racing or other contests, is an equalising of the chances of the contestants by putting extra weight on to proved superior horses or men, also by conceding privileges, in shortened distances, or otherwise, to inferiors. The aim is to give all competitors an even chance.

Handkerchiefs of one kind or another have existed since the dawn of civilisation. The Bible has references to them; and even in the earliest literature we find mention of handkerchiefs of special value and ornamentation. Handkerchiefs of silk and gold lace were in use in Queen Elizabeth's days.

Handspike, a lever of wood or metal used on shipboard for raising weights, moving guns, and other heavy work; now to a large extent superseded by more useful labour-saving contrivances.

Hansard, the title formerly given to the official reports of the proceedings of Parliament, so named after Luke Hansard, who printed the reports from 1798. The Hansard firm continued the publication down to 1889.

Hanseatic League was a formidable trading confederation established in 1241 for purposes of mutual protection in carrying on international commerce. The Hanse towns numbered over 200 when the League was at the height of its power, and exercised greater influence, concluding treaties and exercising almost supreme authority within its own limits. The League safeguarded the seas from pirates, the land from robbers, and coerced opposing governments. A branch of the League was established in London, and had its guildhall in Cannon Street for hundreds of years. The League existed down to the middle of the 17th century. Hamburg, Lubeck, and Bremen were to-day the only cities which, as free ports, still by commercial courtesy retain the name of Hanse towns.

Hansom, a two-wheeled one-horse cab, invented by Joseph A. Hansom in 1843. It was, until the recent introduction of the motor-cab, the cab in most ordinary use in London, and many other cities and towns in the United Kingdom. Lord Beaconsfield styled it the "gondola of London." It is constructed to seat two persons, and the driver sits on a "dickey" behind, level with the roof of the cab.

Hara-kiri, the custom of suicide by compulsion, or "happy despatch," once common in Japan, but no longer permitted. The condemned person gave himself the first cut, and if his courage then failed him, the fatal blow was dealt by a friend.

Hare, the leading member of the *Lepus* family, and common in Northern Europe. Noted for having four upper front teeth, one pair behind the other, long ears, short tufted tail, and a cleft upper lip. It is a very swift animal, and intelligent in eluding pursuit, therefore much hunted, greyhounds being used to chase it, the sport being called "coursing." The hare makes a nest of grass, called a "form."

Harem, the portion of a Mahomedan's dwelling set apart for the female members of his family, and forbidden ground to visitors. In India the harem is called the *Zanana*.

Harlaw, Battle of, the famous fight in 1411 between the Highlanders, under Donald, Lord of the Isles, and the Lowlanders, led by the Earl of Mar, when the latter were completely victorious.

Harleian MSS. comprise some thousands or volumes of MSS. and documents collected by the first Earl of Oxford and his son Edward. After the death of the latter, his widow handed the MSS. over to the nation for £10,000, a sum that did not represent a quarter of their value, and they are deposited in the British Museum.

Harlequin, the buffoon of ancient Italian comedy. As adapted to the British stage, however, harlequin is a pantomime character only, in love with Columbine, appearing in parti-coloured garments and carrying a wand, by which he exercises a magic influence in thwarting the fantastic tricks of the clown and pantaloons.

Harmattan, the Arabic name of a warm, dry wind

that from January to March blows across the Sahara to the Gulf of Guinea and gives rise to nose and mouth ailments, though a deterrent to fever.

Harmonics, the science of musical sounds; the term is also specially applied to the class of sounds which can be given on a musical instrument in addition to the primary sounds, and are produced by a certain skilled manipulation that causes the string played upon to emit its higher octaves thirds, fifths, and so on.

Harmonium, a keyed musical wind instrument, invented by Delabian in 1840, the air being supplied from bellows operated by the feet, and driven through metallic reeds. The American organ is an improved variety of harmonium.

Harp, one of the most ancient of stringed instruments, and in its simpler form much used in England and Wales in early times. The modern harp, however, is a greatly improved instrument, the present double-action harp being capable of producing music in any key with very fine effect. It forms a part of most large orchestras, and for song accompaniments is much appreciated.

Harpoon, a kind of barb-headed spear used for attacking whales. These used to be thrown by hand, but the modern harpoon is an instrument of ingenious mechanism, with shaft, slot, and ring, and is fired from a gun.

Harp-seal, the ordinary Greenland seal, with a dark harp-shaped marking on its back, hence its name. It abounds in Newfoundland waters and further northward towards the Arctic.

Harpisichord, the prototype of the pianoforte, was a valued musical instrument from the 16th to the end of the 18th century. Its keyboard was from 4 to 64 octaves, and the notes, which were thin, were produced by a plucking operation, not by striking.

Harpy Eagle, a native of South America, one of the most powerful birds of prey in existence. It is of grey plumage, and has a large crest. It attacks sheep, calves, and deer, and is very destructive.

Harrowian, a bird of prey, the falcon family, three species of which are found in the North of England and Scotland. It has a ruff of fine feathers round its neck. In some parts it is called the blue hawk.

Harrow, an agricultural implement of great antiquity, formerly made wholly of wooden cross-bars, with a series of strong teeth underneath which when pulled over the ground break it up. Iron is now largely used both for teeth and frame.

Varieties are cham and revolving harrows.

Hartebeest, a species of common African antelope, of a grey-brown colour, with knotted horns bending backward and tapering to sharp points; it is gregarious, of large size, and capable of domestication. Its flesh is not unlike beef in flavour.

Hart's Tongue, the common name for ferns of the *Scolopendrium* genus, only one variety of which is found in England in the wild state.

Harvard University, the first American University established in Cambridge, Massachusetts, in 1636, by John Harvard, a settler from Cambridge, England. It has about 3,000 students.

Harvest Bug, a very small insect, of a dark red colour, which appears in large numbers in the fields in autumn, and is peculiarly irritating to animals and man by the tenacity by which it attaches itself to the skin, and burrows underneath.

Harvest Moon, the first moon that occurs nearest to the autumn equinox, in September. The fact that it rises for several nights running about the same time, and yields an unusually brilliant series of moonlight nights, constitutes its striking phenomenon.

Hashish, a narcotic drug prepared from the gum extracted from Indian hemp, and largely used for smoking by the Arabs, and made into a beverage called *bang* in India, in both cases having much the same effect as opium.

Hashtment, in heraldry, is a square board, in vertical diagonal position, placed outside a house or on the tomb at the death of a member of a family, and so arranged that it indicates the sex and condition of the deceased.

Hatchways, places or openings in the centre of a ship's decks, through which goods are lowered to or lifted from the hold.

Hauberk, a name first given to a portion of mail armour worn over the neck and shoulders, but later applied to a coat of mail extending below the knees.

Haussa, an energetic West African people occupying a tract of country between Lake Tchad and the Niger, and reputed to be of an enterprising spirit, with strong trading instincts.

Hawfinch, a well known European bird of the finch family, having a variegated plumage, a sturdy bill, and black and white tail. In England it is seldom found away from the British and Eastern Counties.

Haw-haw, a fesse or ditch sunk between slopes for defensive purposes, and not perceptible until closely approached.

Hawk, a name applied to a diurnal bird of prey of many species; including buzzards, falcons, kites, ospreys, kestrels, etc., but only rightly belonging to the smaller kinds, such as the goshawks and sparrow-hawks, which swoop down on their prey from a height. There are only these two species in England; in America hawks are numerous.

Hawk-moth, the sphinx moth, is a large species, thick of body and strong of wing, and flies with rapid swooping motion, hence its name. There are numerous handsome varieties in Britain.

Haymarket Theatre, "the little theatre in the Haymarket in London," has existed in one form or another since 1702, and has witnessed many memorable histrionic triumphs. It was here that the famous comedy company got together by J. B. Buckstone played for so long, here Charles Mathews, Mrs. Kendal, Amy Sedgwick, Adelaide Neilson, Sir Squire and Lady Bancroft, Mr. Beerholm Tree, and many other "bright particular stars" of the footlights have appeared.

Heart, the fount and centre of the circulation of the blood in human beings and other animals. It is the organ of the reception and distribution of the circulating fluid, dilating, contracting, and pulsating with the regular action of a force-pump. Its position is behind the breast bone, between the two lungs, and its beating is most apparent below the left nipple, between the fifth and sixth ribs. The male heart weighs 10 to 12 ounces, the female 8 to 10 ounces. Its average size is about 5 inches long, 3½ inches wide, and 2 inches in greatest depth.

Heath-money was an impost put upon every hearth or fireplace in the country. Charles II. was responsible for its introduction, in 1662; it existed for over a quarter of a century, and yielded £300,000 a year. William III. abolished it, because of "having been informed" that it was "very grievous to the people."

Heat, according to the modern scientific definition, is not a material substance, but molecular energy. This molecular motion consists, in the case of a liquid, of the irregular movement of its molecules; in a solid the movements are oscillatory; and with gas the motions are rectilinear with swift alterations of velocity and direction as the molecules come near enough to each other. Cessation of motion results only at zero point. As to the transmission of heat, Lord Kelvin lays it down that "in the strictest modern scientific language, the word *heat* is used to denote something communicable from one body or piece of matter to another." The transmission of heat may be effected in three ways: by convection, by conduction or by radiation.

Heath, a plant of the Ericaceae order, very widely distributed over the uncultivated spaces of Europe and Africa. In this country thousands of acres of waste lands yield it, it being especially abundant on the northern moors, and known as heather and ling. Some of the African, or Cape heaths, are very beautiful, and are much cultivated for the florists.

Hebrews. Epistle to the Hebrews, one of the books of the New Testament, to which no direct authorship can be assigned. Its chief mission was to proclaim Christianity as the continuation and fulfilment of the older Jewish faith.

Hecatomb, the name given to the public sacrifice of a hundred oxen in ancient Greece. In later times the word has been used to express any wholesale sacrifice of human beings or animals.

Hedgehog, a common insectivorous animal covered with sharp spines, which it can, when on its defence, project in every direction by rolling itself up into a ball. It is a hibernating animal.

Hegira, an Arab term signifying departure or flight, and used more particularly in reference to Mahomed's departure from Mecca for Medina, A.D. 662, from which date the Mahomedan era is reckoned.

Heliograph, an apparatus used for sun-signalling, consisting of a movable mirror fixed on a tripod, which mirror flashes light reflections to a distant station according to a pre-arranged code, on the dot and dash system, forming an effective means of communication. Heliograph signalling can be carried on at very long distances—up to 50 miles in ordinary weather—without the aid of field glasses.

Heliometer, an astronomical instrument for investigating the parallax of the fixed stars, and consisting of a telescope which has had its objective cut through the optical axis, admitting of both halves being conjointly utilised, one directed on one star while the other brings another into coincidence.

Heliostat, an instrument comprising a mirror (operated by clockwork) which reflects the sun's rays continuously in the same direction.

Heliotrope, a favourite sweet-scented flowering plant, common in tropical and sub-tropical countries; the Peruvian heliotrope is the "cherry pie" of our summer garden borders.

Heliotype, a method of printing from photograph negatives by the use of a chemically treated gelatine surface as from a lithographic stone.

Helium, a gaseous substance discovered in 1895 by Sir William Ramsay in eleven, uranium, and other kindred minerals associated with argon and nitrogen. It is also found in the gas given off by radium.

Hell, according to the teaching of the earlier Christian fathers, is a place of eternal torment, to which the spirits of the wicked are doomed after mortal death. The Inferno, as imagined by Dante, is even now believed in by many, but in the general broadening of philosophic inquiry in modern times, the idea of this material hell has been greatly modified. The most orthodox of teachers in these days would hesitate to proclaim his belief in the hell of burning fires as accepted so generally a few generations ago.

Hellebore, a plant of the Ranunculaceae order. The best known British examples are the green and stinking varieties. There is also a garden kind, which flowers in December. It is called the Christmas Rose. Hellebore yields a bitter substance which forms a drastic purgative, but is now little used.

Hellenism is the pursuit of the Greek ideal of physical and intellectual culture. Matthew Arnold's doctrine of "sweetness and light" had its foundation in Hellenism.

Helmet, originally a soldier's protective head covering, now a term applied to defensive head-gear generally. In medieval times helmets were for the most part of metal, and varied in shape from reign to reign. Roman gladiators wore helmets that covered the face entirely, and the helmets worn at tournaments in the 15th and 16th centuries were so closed in that the wearers could only see through the perforations of the visor. The stiff hats worn by soldiers, policemen, and firemen generally are now styled helmets.

Hellata, bondmen of ancient Sparta upon whom devolved the most menial occupations without other recompense than food and lodging.

Helvetii, an ancient Celtic race who inhabited the part of Switzerland of which the capital was Aventicum.

Helvín, a mineral substance found in Saxony and Virginia, being a silicate of beryllium, manganese, and iron, and containing a small proportion of sulphur, which gives it a yellowish hue.

Hemiptera, an order of insects most of which are known by the general term of "bugs." Their wing structure is in most species incomplete, hence the

term hemiptera. There are supposed to be some half million species, including plant lice, cicadas, etc. They feed on plant juices, insect and animal blood, sap, etc. The order has two main divisions, Heteroptera, indicating true bugs, and Homoptera, the lice classes.

Hemisphere, half of the terrestrial or celestial globe. This, taking the equator as the dividing line, we have the Northern Hemisphere above that line, and the Southern Hemisphere below it. Again, there is the geographical division of the Eastern and Western Hemispheres, the former comprising Europe, Asia, Africa, and their outlying islands; the latter including North and South America.

Hemlock, a plant of the Umbelliferae family, growing in all parts of Britain, and containing a strong alkaline poison. Used medicinally, this alkaline substance is of considerable service, being a powerful sedative. According to Pliny, hemlock was the poison used by the Athenians in putting criminals to death.

Hemp, a plant of the nettle family, growing abundantly in tropical countries, and cultivated for a valuable fibre contained in its bark. This fibre, which is obtained by maceration, is tough and strong, and is largely used for rope making and in manufacturing coarse fabrics. It contains a resinous substance which the husbandry practiced by the Arabs is made. The seed yields a valuable oil, and is also largely used as bird food.

Herbane, a plant common in Britain and other parts of Europe and Northern Asia. It belongs to the Solanaceae order, grows mostly on waste ground, and bears yellow-brown flowers veined with purple. The leaves yield a poisonous alkaloid substance which, medicinally prepared and administered, is of great use. Tincture of herbane is often preferred to laudanum.

Henna, an Egyptian plant bearing small white flowers. Mahomed's "chief of flowers," and the "camphure" mentioned in the Bible. The leaves yield a dye with which it is the practice of Eastern women to stain their nails, eyelids and hair.

Heptameron, a book of stories, written or compiled by Queen Margaret of Navarre in imitation of Boccaccio's *Decameron*, and supposed to have covered seven days in the telling.

Heptarchy, the name applied to the seven kingdoms into which England was divided after the Anglo-Saxon invasion, and lasting, with occasional variations, from 457 to 827—from Hengist to Egbert, the latter assuming the sole sovereignty in 827. The seven kingdoms were Kent; Sussex (including Surrey); Wessex (Hants, Wilts, Somerset, Dorset and Devon); Essex (with Middlesex thrown in); Northumbria (all the country from the Humber to the Forth); East Anglia (Norfolk, Suffolk, and Cambridge); and Mercia, the Midland counties.

Heracleum, a plant of the Umbelliferae order, common in Southern and Central Europe, though only one species, the cow parsnip, grows in England. It has a bitter root, and from the juice of the stem an intoxicating liquor is occasionally prepared.

Herald, an officer of state empowered to make formal proclamations and deliver messages from the sovereign or other high personage whom he served. In the Developments which took place in armorial bearings, the herald was the functionary charged with the duty of their proper depiction.

Heraldry, the art or science of genealogy and armorial bearings, was mainly the outcome of the love of outward distinction which prevailed in medieval times. "Heraldry," says Stubbs, "became a handmaid of chivalry, and the marshalling of badges, crests, coat-armour, pennons, helms and other devices of distinction, grew into an important branch of knowledge." The shield, or *escutcheon* is the ground upon which armorial signs are traced, the colour of the shield being called the *background*, the signs recorded the *charges*. There are seven *tinctures*—or (gold), *argent* (silver), *gules* (red), *azure* (blue), *vert* (green), *purpure* (purple), and *sable* (black). The *charges* are classed as "Honourable" and Sub-ordinate, "ordinaries," comprising lines and geometrical forms: "and" "Common"

ordinaries, which latter includes all representations of natural objects. There is also a system of external signs, such as crowns, coronets, mitres, helmets, mantling, wreaths and crests, each having its distinctive significance. For other distinguishing marks see *Supporters, Hatchments, Ragdes*, etc.

Herald's College, or College of Arms, was incorporated by Richard III., in 1483. Its head is the Earl Marshal (an office hereditary in the family of the Dukes of Norfolk), and there are three Kings-of-Arms, six Heralds, an extra Herald, and four Pursuivants. The business transacted is wholly connected with the tracing of genealogies and the granting of armorial bearings. In Scotland the Heraldic functions are performed by the Lyon King-of-Arms, and in Ireland by the Ulster King-of-Arms.

Herbarium, a systematically classified collection of preserved plants. A special size of herbarium sheet is adopted for mounting the specimens, that of the United States being larger than that used in Europe.

Herbivora, animals, especially mammals, subsisting upon grass, herbs, or other plants.

Herbs, a term used to designate all plants with succulent, non-wood producing stems, whose leaves or flowers die down on the approach of winter, in some instances the root perishing as well.

Heredity, the transmission of physical or mental characteristics from parent to offspring in successive generations. Thus, we have families of musicians, families of financiers, families of artists, families of actors, families of soldiers, and so on, members of which, as a rule, may show the ancestral characteristics in a certain degree, although the striking genus may not appear except at wide intervals.

Hersford Cattle, a breed having a dark-red body, with a white face and breast, and sometimes a long line of white upon the back. They are hardy, good grazing animals, excellent for the butcher, but not useful for dairy purposes.

Heretics, a term applied to those who adopt a religious belief opposed to that of the Christian Church in general, or to that imposed for the time being by a state. Before, and for some time after, the Reformation, heretics were severely dealt with, hundreds being burned at the stake; but opinions which made heretics in one reign were often those that proved the orthodox Christians of another.

Heriot, a fine and acknowledgment of service due to a lord or lord and paid on the decease of the tenant. Its form of tribute is still retained in connection with some copyhold holdings. In feudal times the heriot usually consisted of some portion of military equipment.

Hermaphrodite, a term applied to human beings, animals, or plants, possessing both male and female generative characteristics. True hermaphrodites very rarely occur, so-called hermaphrodites being generally undeveloped as to either sexual distinction.

Hermetic Philosophy, the doctrine or system propounded by Hermes Trismegistus, an Egyptian of the 2nd century, who was supposed to have written forty-two books devoted to religion and the occult sciences, which books were always kept under secret guard, hence the term "hermetically sealed." These Hermetic Books were presumed to be copied from the more ancient sacred books of Egypt, and the "Philosopher's Stone" was one of their chief propositions.

Hermite, one who retires into seclusion for the purpose of religious contemplation, and a desire to live apart from the world. Hermits were regarded with great reverence in medieval times and were free to wander from country to country. It was Peter the Hermit who instigated the first Crusade.

Hermite Crab, a kind of crab having a soft fleshy body, without shell-protection. It possesses itself of the empty shell of some mollusc, into which it backs itself, and this usurped shell it carries about with it thenceforward, or until it has outgrown its dimensions, when it seeks a larger one. The common Hermit Crab of Britain usually resorts to a whelk shell.

Heron, a large wading bird with long curved neck and pointed bill, is a member of the Ardeide family, of which there are many species. Egrets and bitterns

are included as herons. Herons are to be met with in marsh lands and near rivers and lakes, where they feed on fish and frogs. They nest in trees in large numbers, these colonies being called heronries. The common heron is native to England, and other species from the Continent are frequent visitors.

Herring, a common sea-fish abounding in northern seas and always to be found in large numbers round the British coasts. The herring fishing is the most important fish industry in this country, a very numerous fleet being engaged in it. The fishing season proper lasts from May to October, the enormous shoals being followed as they move from place to place. The spawning season is about the end of August. One female herring will yield as many as 70,000 eggs. The annual value of the British herring fishery is between £2,000,000 and £3,000,000, over half a million barrels being cured in Scotland alone every year.

Heterogenesis, a term first used by Huxley to indicate the production of offspring, plant or animal, differing permanently in structure and habit from its parent, and representing to a certain extent spontaneous generation. In instances cited, however, there is a return to the original form after one or two generations.

Heteromys, a species of "spiny pocket" rodents, possessing cheek pouches, belonging to the family Saccomyina, and indigenous to Trinidad.

Hexagon, a figure consisting of six sides and six angles, called a regular hexagon when all the sides and angles are equal.

Hexahedron, a solid body having six sides, particularly exemplified in the cube, or regular hexahedron.

Hexameter, a measure of verse consisting of six feet, the first four of which may be either spondee or dactyl, and while the fifth is normally a dactyl, the sixth must be a spondee.

Hexapla, a 3rd century edition of the Old Testament in Greek, compiled by Origen.

Hexateuch, the title given to the first six books of the Old Testament, comprising the Book of Joshua in addition to the five books of the Pentateuch.

"Hiawatha," the title of one of Longfellow's best-known poems. The hero is a being supposed by the Red Indians to be a spirit sent from realms of space to lead them to a higher existence.

Hibbert Lectures, founded in 1878 by the bequest of John Hibbert, a West Indian merchant, their aim being to allow important matters of theology to be dealt with by eminent authorities.

Hibernation expresses the dormant condition in which numerous animals, reptiles, amphibians, insects, plants, etc., pass the winter. In the case of animals it is a deep sleep that they undergo, and is due probably more to the winter being the period when natural food is unobtainable than to the cold. Before hibernation sets in, the animals fatten themselves up, but in spite of this there is considerable loss of weight sustained. Animals of the torrid regions pass through an analogous period during the hot season, when the sources of food are dried up.

Hickory, an American tree of the walnut family remarkable for its very hard, solid, heavy white wood, and bearing an edible, four-lobed nut.

Hickory-shirt, an American term signifying a shirt made from checked cotton stuff.

Hickites were a small community of American Quakers, who separated themselves from the parent church, under Elias Hicks, in 1827, and held doctrines almost similar to those of the Unitarians.

Hierarchy, a term applied to ecclesiastical or Church government, and involving a graded organisation with a supreme head.

Hieroglyphics are the earliest form of pictured symbolic expression, and are supposed to have been introduced by the ancient Egyptians. They consist of rude depictions of animals, plants, signs, and objects, and in their later examples express, in abbreviated form, ideas and records from which significant historical information has been gleaned. The deciphering of Egyptian hieroglyphics long formed an arduous study, but gradually the key to the riddle was discovered, and most of the ancient records can now be understood.

Hieronymites were hermits of the order of St. Jerome, established in the 14th century, on the Peninsula. The order survives now only in America.

Hindus are the native race of Hindustan, the Brahmans and the Rajputs being regarded as the purest types. They are mostly of Aryan descent, and their religion—Hinduism—is a faith evolved from a combination of Brahminism and Buddhism.

Hippodrome, in ancient Greece, was a building set apart for horse and chariot races, and was often the scene of great spectacular performances.

Hippogriff, a fabulous animal, like a horse in body, but with the head, wings, and front legs and claws of an eagle. The monster frequently appears in the romances of the Middle Ages.

Hippophagi, eaters of horse-flesh, applied specifically to certain nomadic tribes of Scythia and the north of the Caspian.

Hippopotamus, the largest living representative of the hog family, and widely distributed over Africa, where it is known as the "river-horse." It is of immense bulk, attaining a length of from 12 to 14 feet, and stands about 5 feet high. Its skin is hairless and about a inches thick, and it has a pair of tusks often weighing as much as 6 lb. In Britain fossil remains of a larger species, the *hippopotamus* than any now existing have been found.

Hippuric Acid, an acid soluble in warm water and forming into hippurates in association with metals. It is obtained chiefly from the urine of herbivorous animals, and when heated with a powerful acid resolves into benzoic acid and glycolic acid.

Hippuris, a genus of plants growing in marshy places. It has an erect stem, bears polygamous flowers, and has its leaves in whorl form. Its astringent qualities render it of use in medicine. The common Mare's-tail is a well-known variety.

Hyalargite, a hydrous iron silicate found in certain parts of Scandinavia, and named after Hisinger, the Swedish mineralogist.

Histology is that part of anatomical science which deals with those details of the human structure that can only be investigated with the aid of the microscope.

Historiography, the art or avocation of the historian.

Hittites, an ancient race of northern Syria, referred to in the Old Testament, and rendered subject to Solomon, to whom they paid tribute.

Hobby, a bird of the falcon family, and about 12 inches long, seen in England in the summer, and formerly flown at small birds, which are its chief food.

Hobson's Choice, a term meaning the compulsory acceptance of the thing offered, is an English proverbial phrase which had its origin in the circumstance of the letting of horses by a Cambridge innkeeper named Hobson, who compelled each customer to take the horse which stood nearest to the stable door, "that or none."

Hocce, the common name of the curassow and other birds of that family, of which there are twelve species, all natives of South America.

Hochheimer, a Rhine wine of high repute, made from the yield of the vineyards of Hochheim, near Mayence, Germany.

Hog, the common name of animals of the *Sus* family, including the wild boar, pig, and sow. The wild boar, *Sus scrofa*, is the common ancestor. The skin of the hog is covered with bristles, the snout truncated, and each foot has four hooved toes. Hogs are omnivorous feeders and eat almost anything that is given them.

Hogmanay, the Scottish New Year's Eve festival and a national holiday of the country. The custom of demanding Hogmanay bread is still upheld in many parts of Scotland.

Hogshead, a cask of varying capacity, also a specific measure. In the old English measure a hogshead was 54 imperial gallons, or 93 old gallons of wine. Of beer 54 old gallons make a hogshead.

Holland, the name given to a fine kind of cloth made from flax, originally manufactured only in Holland. Brown Holland is the kind not fully bleached.

Hollands, Schiedam, or Schnapps, a kind of gin made mostly in Holland from rye and malt, with a flavouring of juniper berries.

Holly, a hardy evergreen shrub, largely grown in England. Its bright dark green prickly curved leaves and its clusters of red berries are familiar in all parts of the country. Its wood is white and hard, and much valued for carved work, while its bark yields a gummy substance which is converted into birdlime.

Holograph, a letter, manuscript, or document written throughout by its author.

Holothuridae, the class of marine animals commonly called sea-cucumbers, a variety of which—the trepan—is highly prized as a food in China.

Holy Alliance, the league entered into after Waterloo by Russia, Austria, Prussia, and other powers, except England, for mutual protection of their dynasties and the prevention of any member of the Bonaparte family from occupying a European throne. The alliance only existed down to 1890.

Holy Coat of Treves, a garment preserved in the Cathedral of Treves, and said to have been worn by Christ. It was brought from Jerusalem by the Empress Helena in the fourth century.

Holy Grail, the cup from which Christ drank at the Last Supper, and supposed to have been preserved by Joseph of Arimathea. Many poets and romancers have made the "Quest of the Holy Grail" the subject of their imaginings, Tennyson making fine use of it in his "Idylls of the King."

Holy Rood, an annual Roman Catholic festival, on September 14th, to celebrate the recovery by the Emperor Heraclius in 615 of a portion of the original Cross, after it had been lost for nearly 300 years and had fallen into the hands of the Persians. Also included in the Church of England calendar.

Holyrood, the ancient royal palace at Edinburgh, dating from the 15th century, and inhabited by many Scottish sovereigns, notably Mary Stuart, the room occupied by her (including the one in which Rizzio was murdered) being still shown. It has not been used as a royal residence for 300 years.

Holy Water, water blessed by a priest and kept in small fountains at the entrance to Roman Catholic churches, and used by worshippers going in, and out, or by priests in sprinkling.

Holy Week, or Passion Week is the week preceding Easter Sunday, and includes the days of the Sufferings of Christ, ending on Good Friday.

Homage, an act of fealty whereby a person acknowledges his service of inferiority to another.

Home Rule, the term applied to a separate Irish Parliament, which was the object of two Bills introduced by Mr. Gladstone in 1886 and 1893 respectively, both of which were rejected, and led to the establishment of a Liberal Unionist party of seceding Liberals. Mr. Asquith introduced a new Home Rule Bill on February 12, 1912. In September strong counter demonstrations, headed by Sir Edward Carson, took place in Ulster; on January 16, 1913, the Bill was passed through the Commons, by a majority of 110, on the vote of 110, the same month being rejected by the Lords by 265 to 69. It was reintroduced by Mr. Asquith in the new session of 1913, again repassed by the Commons, and again rejected by the Lords. In 1914 the conflict between the opposing parties became more acute, but the Bill passed its third reading in the Commons on May 25 by a majority of 77. Meanwhile, the Ulster Volunteers on the one hand, and a force of Nationalist Volunteers on the other, were organised, and there was much agitation. The King summoned a conference of party leaders to Buckingham Palace and still no decision was reached; but on the outbreak of war party politics was set aside, and ultimately the Bill was allowed to pass and the Royal Assent was given to it, its operation to be delayed until after the war.

Homer, a Hellespontine measure containing ten ephahs.

Homicide (the killing of a human being) has three classifications—*justifiable*, as when the killing is an act of necessity, or performed in the execution of justice; *excusable*, when done in self defence or by misadventure; and *felonious*, when done of deliberate intent, as murder, manslaughter, and suicide.

Homily, something between a discourse and a sermon; not so discursive as the one, or so placidatory as the other.

Homoeopathy, a medical system introduced by Hahnemann, the German physician, early in the last century, and founded on the principle that "like cures like." The homoeopathic theory is that diseased conditions are curable by the administration of such drugs as would, if the conditions were healthy, produce symptoms similar to the disease itself. Homoeopathic medicines are given in infinitesimal doses with the idea that the minute subdivision of a drug adds to its power. Homoeopathy has still many professors and adherents, but it can hardly be said to have realised the expectations of its earlier exponents.

Homoeosians, religionists who, in the 4th century, in the contentions then raging regarding the nature of Christ, maintained that the Son and the Father were the same in essence, as against the Homoiousians, who held that while being similar the natures were not the same. The Homoeosians are sometimes styled Athanasians, from their leader.

Honey, the sweet substance gathered by the honey-bee, and some other insects, from flowers, and deposited by them in honeycombed cells as food storage. It is of a yellow-white colour, and is largely composed of water, dextrose, and levulose. Ferment, when exposed to the air. (See *Bee*.)

Honey Bees, the same given to honey-eaters who receive from the workers the honey they have gathered, swallowing it and storing it in their bodies for the after-use of the workers as required.

Honeydew, a viscid secretion, from plants or plant lice, found on leaves, chiefly in hot weather, and looking like dew.

Honeyeater, an Australian bird (of which there are many species) provided with a long curved bill, and tufted tongue. It lives by sucking the "nectar" from the flowers which abound in rural parts of Australia and New Zealand.

Honours of War, a privilege sometimes conceded to a defeated force of marching out of the place surrendered with colours flying and drums beating.

Hookah, an Oriental pipe or apparatus for tobacco smoking, the smoke being drawn through the water of a glass goblet by means of a long flexible tube.

Hook-money, an old silver currency of Ceylon, consisting not of coinage, but of hooked pieces of actual silver, in use in the 17th century.

Hoopoe, a peculiar bird, with a movable semi-circular crest on the top of its head, and a long, slightly curved bill. It is a native of Africa, and one of the six known species migrates to Europe, occasionally visiting Britain.

Hop, a biennial twining plant largely cultivated in the southern, south-eastern, and south-western counties of England for its female flowers, used mainly for flavouring malt liquors. Hop-plants are trained upon poles, and in the autumn the flowers are picked by hand, an immense number of persons being engaged in the harvesting of them. The Flemings are said to have introduced the hop plant to England, about the time of the Reformation.

Hop-fly, the name of an insect of the Hemiptera order, which preys upon the hop and certain other plants, and sucks the juice from them, acting like a blight when the visitation is numerous.

Hoplia, a genus of beetles, peculiar in having the lowest abdominal segment short and the pygidium vertical. They are found in most parts of the world.

Hoplite, the name given to a heavily armed foot soldier in ancient Greece, carrying shield and javelin, and wearing a helmet and armour.

Horary, a term used of the arc which a celestial body describes in an hour, or the angle which that arc subtends, the eye of the onlooker being supposed to be at the angular point.

Horizon, the limit of vision, the apparent line where sea and sky, or land and sky, meet. This is termed the *sensible* or visible horizon. The astronomical horizon is a plane which, perpendicular to gravity at any point, divides the celestial sphere into two equal portions, upper and lower halves. There is also an artificial horizon, consisting of a surface of mercury or other fluid, whereby the altitude of any particular star can be reckoned.

Horn, a wind musical instrument, usually of brass

and of varying sizes, shapes, and musical power, ranging from the long coaching-horn to the small hunting-horn. The French horn is formed of a continuous twisted tube, and furnished with a movable mouthpiece.

Hornbill, a large bird, remarkable for its having an immense horned upward curved helmet, growing over its downward curved beak. It inhabits tropical regions, and feeds on fruits. When the female has laid her eggs in the hollow of a tree, the male-bird stops up the entrance, and keeps her imprisoned until the hatching is completed and the young ones are able to fly.

Hornblende, a hard common mineral, a silicate of calcium, magnesium, iron and aluminium, of a dark green colour. It is a constituent of numerous rocks, including diorite, syenite, and hornblende schist.

Horn Book, a children's alphabet and primer which had a cover of thin horn; hence its name. It was in use until about a hundred years ago.

Horned Viper, a curious African genus of Viperidae, with a small pointed horn over each eyebrow; a venomous species, found in Egypt, is thought by some to be identical with the "adder" mentioned in Genesis xlix. 17.

Hornets are well-known insects of the wasp family, and live in communities, generally nesting in hollows of trees. The hornet's sting is very painful.

Hornpipe, an old English single-step dance, which used to be executed to the music of an ancient horn-pipe, hence its name.

Hornstone, a dark, flint-like rock, largely used for flint mull in potteries.

Hornywink, a popular name for the lapwing.

Horology, the science of time-measurement, including the construction and management of clocks, watches, etc. Instruments of this kind are not known to have existed before the 13th century, and until the introduction of the pendulum in the 17th century, clocks were ill-regulated and inaccurate. The time-recording mechanism of the present day include (a) the *clock*, which shows the hours and minutes by hands, and strikes the hours, and sometimes quarters; (b) the *timepiece*, which is not generally a fixture and shows the time, but does not strike; (c) the *watch*, which is a pocket time-keeper; and (d) the *chronometer*, which indicates the minutest portions of time.

Horoepope, an astrological term, indicating the reading of the signs of the planetary bodies, according to the methods of the astrologers, at the date of a personal nativity, or other given date. In ancient times there were astrologers attached to the various courts, and their "castings" and predictions had many believers.

Horse, in its domesticated form, one of the most familiar of quadrupeds. How, when, or where its first domestication took place is unknown. The wild horses of the present day can be traced to have descended from domestic breeds which have broken from restraint, such as the wild horses of the South American pampas, and of Tartary. The two leading types are the Arabian, whose strain is apparent in the racehorse and other animals in which speed is the pronounced characteristic, and the powerful Flemish horse which has contributed the elements of strength and endurance to the various breeds of draught horses. The anatomical features of the horse are too well known to need description.

Horse Chestnut, one of the large forest trees, with ample branches and full foliage, and much esteemed for parks and ornamental grounds. The bark and fruit seeds yield substances of commercial value, but the timber is not worth much. The tree came originally from Asia about the 16th century.

Horse Guards, the building in Whitehall which until 1872 was the headquarters of the Commander-in-Chief of the British Army. The archway is still sentinelled by mounted guards.

Horse, Master of the, the Court official having charge of the royal stables. It is a party appointment and carries with it a salary of £2,000 a year.

Hospice, a place of refuge and rest for travellers and pilgrims. The most famous is that of the St. Bernard Pass, where dogs are kept for the succour and help of belated wayfarers.

Hospitaliers, Knights, were of the order of St. John of Jerusalem, at first devoted to the aid of the sick, but afterwards military monks, who became prominent figures in the Crusades of the 12th century, and after successive defeats were dispersed and led an unsettled existence shifting from place to place, until in the 16th century they had the island of Malta given to them, and continued there until dislodged by Napoleon in 1802. In recent times there has been some attempt to revive the order on a firmer basis, and the modern English institution of Knights of St. John serves to commemorate the old name and to continue something of the original service.

Hôtel des Invalides, the famous military hospital and soldiers' home in Paris, founded in 1670, and one of the attractions of the city in later years, from the fact of its containing the tomb of Napoleon.

Hottentots, an African native race of considerable intelligence, mostly following the pursuits of herdsmen and hunters, and numbering some 200,000.

Hounds are dogs that were originally bred and trained for hunting, such as the greyhound, foxhound, bloodhound, wolfhound, deerhound, beagle, harrier, etc., but now often kept also as domestic dogs. The greyhound, deerhound, and wolfhounds hunt by sight, the others, with the bloodhound first in order, track by scent.

Hour-glass, a glass instrument tapering to the middle to a narrow office, through which a sufficient quantity of fine sand gravitates to mark an hour of time. When the sand has run through from one end, it can be reversed and made to count the hour in the opposite direction. The same kind of glass, with smaller supplies of sand will indicate shorter periods, as an egg-glass which runs its course in three minutes—time to boil an egg by.

Hours, according to the Koran, are beautiful nymphs of paradise set apart to attend upon the "faithful" Mohammedans as they enter the celestial abode.

House-boat, a boat fitted up with living, sleeping, and cooking apartments, and serving for temporary occupation by families or pleasure parties in making river excursions. In England such boats are mainly confined to the Upper Thames. In Eastern countries house-boats that are permanent habitations are common on the big rivers.

Household Brigade, a body of soldiers retained for the special service of guarding the king and garrisoning the capital; consisting of the three cavalry regiments of the Royal Horse Guards and the 1st and 2nd Life Guards, and four foot regiments—the Grenadier, the Scots Fusilier, the Coldstream, and the Irish Guards, comprising in all some 6,000 men.

House Flies abound in all countries, and are exceedingly prolific. Their eggs are hatched within 24 hours of being deposited, and full maturity is attained in a month. They feed mainly on decayed animal and vegetable matter.

Hovas, the dominant tribe in Madagascar until the French took possession of the island in 1895.

Hovite, the name of a white earthy mineral of somewhat uncertain composition, but generally described as a hydrous carbonate of aluminum and calcium. It derives its name from being found at Hove.

Howdah, a raised, canopied seat fitted on to the back of an elephant for conveying people in. The name is also given to a somewhat similar contrivance for the backs of camels.

Howitzer, a cannon, short and light in proportion to its bore, used for throwing shells and case-shot, and requiring a comparatively small charge.

Howling Monkey species of South American monkey noted for a laryngeal conformation which enables it to emit a loud reverberant noise something between a yell and a howl; hence its name. The peculiarity is developed most strongly in the males, which are the largest American species.

Hoy, a small sloop-rigged vessel usually engaged in light traffic, such as conveying passengers and goods from the shore to steamers, or *vice versa*.

Huango-bark, a medicinal bark, brought from the Peruvian town of that name, and derived from the *Cinchona micrantha* tree.

Huckaback, a kind of strong linen cloth, with one side rough; generally used for towelling.

Huguenots, a name applied to the French Protestant communities of the 16th and 17th centuries. Under Francis I. and later monarchs they were subjected to many persecutions, and at times were in active conflict with the Catholics. Henry of Navarre, by the Edict of Nantes in 1598, granted them religious freedom, but more than a quarter of a century before—August 24th, 1572—70,000 of them had been put to death in the Massacre of St. Bartholomew. In 1685 they were further persecuted by the revocation of the Edict of Nantes by Louis XIV., when hundreds of thousands left the country never to return, a large proportion of them taking refuge in England, where they greatly helped in the development of many industries.

Hulsean Lectures, a series of from four to six lectures delivered annually by a selected preacher before the University of Cambridge on scriptural subjects, under the provision of the will of John Hulse, who died in 1700. There is also a Hulsean professorship of divinity at the same university, established in 1860 in substitution for the office of "Christian Advocate" originally founded by Hulse.

Humane Society, Royal, dates from 1774, gives rewards and medals for the saving of life or attempts to save life to the number of many hundreds annually, expending nearly £2,000 a year in that object. It provides boatsmen to watch over the swimmers at the chief bathing-places round the coast.

Humanitarian, one who holds the belief that Christ was only human, that the whole duty of man is summed up in the performance of good deeds, and that Divine aid is not necessary to a perfect existence.

Humble-bee, the common name of the insects of the genus *Bombus*, of the Hymenoptera order. They live in small communities comprising males, females, and neuters, their habitations being underground. They do not have one queen bee only like the hive bee, but several females occupy the same nest, and these alone live through the winter, breeding and forming new colonies in the spring.

Humite, a mineral of the Chondrodite variety, crystalline and translucent, brownish-yellow to white in colour, composed of magnesia, silica, fluorine, and protoxide of iron.

Humming Birds are so called because of the humming noise made by the vibration of their wings in flying. They are of radiant plumage, bright crimson mingling with lustrous green, with other iridescent colours flaring and shining, and in size they are among the smallest of birds. There are from four to five hundred species, and they are confined wholly to North and South America, being most numerous in the tropical latitudes.

Hummum, the original name for what is now called the Turkish Bath in this country. One of the first of these baths to be established in London was the Hummums in Covent Garden.

Hundred, the ancient divisional name given to a portion of a county for administration or military purposes. The origin of the name is somewhat obscure. By some it is supposed to imply the territory occupied by a hundred families; by others the space of a hundred hides of land, or the capacity of providing 100 soldiers. Each hundred had its hundred court, with powers similar to those of a manor court.

Hundred Days, the period that derives this title from the fact that it covers the time within which Napoleon I. escaped from Elba and was finally overthrown at Waterloo, March to June, 1815.

Hundredweight in Great Britain is 112 lb. avoirdupois; in the United States it is an even 100 lb. The English cwt. is divided into four quarters of 28 lb. each.

Hundred Years' War, a term applied to the almost incessant contest between England and France, lasting from 1337 to 1453, including such famous battles as Crecy, Poitiers, and Agincourt, and engaging successively Edward III., Henry V., and Henry VI., among English kings.

Huns, a fierce Asiatic race which swept over Eastern Europe in the 4th century, and took possession of the

country between the Volga and the Don, Attila being their formidable leader. They defeated the Goths and forced the Romans to pay tribute. When they lost their chief, however, in 454, they were soon driven back, and it is doubtful whether any of the present races of Eastern Europe are their direct descendants.

Hunterian Museum, a celebrated collection of anatomical specimens originated by John Hunter, the distinguished surgeon and physiologist, towards the end of the 18th century in London, and now in the possession of the Royal College of Surgeons. Dr. William Hunter, the brother of the great anatomist, also founded a Hunterian Museum at the University of Glasgow.

Hurdy-Gurdy, an Italian rustic so-called musical stringed instrument of the lute order, the sounds of which are produced by the action of a rosined wheel turned by the left hand, the notes being made by the fingering of the right hand.

Hureaulite, a transparent, almost colourless mineral, found in granite measures at Limoges, near Hureau.

Hurricane, a tempest or violent storm, such as prevails with frequency in the China seas and the East and West Indies, often occasioning great havoc.

Hussars are represented in the British Army by twelve regiments. The distinguishing portion of the uniform consists of a fur busby with a cloth ornamentation hanging over the right side. They are armed with carbine and sabre.

Hussites, followers of John Huss, the Bohemian reformer, who was burned at the stake in 1415. After their leader's death, the Hussites became a formidable body, and took up arms on behalf of their faith, their religion being strongly imbued with political feeling. They were subdued in 1434, and later were absorbed by other Protestant sects.

Hyæna, a carnivorous quadruped of which there are three species: the striped, or laughing hyæna, common to North Africa, India, Syria, and Persia, and noted for the peculiar cry from which its name is derived; the brown hyæna, with long shaggy hair, a native of Southern Africa; and the spotted hyæna, also confined to Africa. They have all great jaw-power, live on carrion, and are of nocturnal habits.

Hyalograph, an instrument designed for tracing upon transparent surfaces.

Hybrid, an animal or plant produced by the union of two distinct species.

Hydra, a peculiar aquatic animal of simple structure, whose body is in the form of a cylindrical tube, with a disc-shaped base by which it attaches itself to any shifting substance. Its mouth is surrounded by tentacles by which it catches its food. The Hydra has the power of regenerating lost parts.

Hydrates, are compounds formed by the combination of metallic oxides with water, or the union of water with salts. The most ordinary forms of hydrates are caustic soda, caustic potash, and slaked lime.

Hydraulic Press, perfected by Joseph Bramah, the inventor, in 1796, is a useful apparatus, the pressing power of which is obtained by the action of water. Two plates, the upper one movable and attached to a large piston, the lower one fixed, are contained within two uprights. The movable piston works in a cylinder of water in connection with a small force-pump, and the pressure is applied by moving a lever which brings a well-known hydrostatic law into operation, and presses the material between the two plates to the required degree. The hydraulic press is largely used for compressing articles for packing, and for extracting purposes.

Hydraulic Ram, a form of automatic pump, used to raise water to a height by the action of its own falling velocity.

Hydraulics, the science of applied hydrodynamics, or water-machinery engineering, ranging from pumps to marine engines.

Hydrocarbons are compounds of carbon and hydrogen, forming one of the principal groups of compounds and with their derivatives, constituting the main concern and source of organic chemistry.

They are classed as gaseous, liquid, and solid, according to the proportions of hydrogen or carbon they contain.

Hydrochloric Acid, a colourless gas, consisting of hydrogen and chlorine, and resulting in considerable quantities as a bye-product of the soda-ash or salt-cake manufacture. Its solution forms the common hydrochloric or muriatic acid of commerce, and is largely utilised in dyeing, calico-printing, bleaching, and in the production of chlorine. It has a suffocating odour, and is one of the elements of digestion.

Hydrocyanic Acid, cyanide of hydrogen or prussic acid; very poisonous, and of the odour of bitter almonds. Discovered by Scheele in 1782.

Hydrodynamics, the science of the application of the laws of dynamics to fluids, and covering both fluids in rest and fluids in motion.

Hydrofluoric Acid is obtained from a distillation of fluorspar with sulphuric acid, and is a compound of fluorine and hydrogen. Its action is highly corrosive, it is a valuable agent in etching on glass, and is a rapid decomposer of animal matter.

Hydrogen, a colourless elementary matter and the lightest of all substances, on that account being accepted as the standard unit of the specific gravity of gases. It is 14½ times as light as air, and is found in a free state in volcanic regions, and in the emanations of oil wells. It can be obtained by the action of acids on metals, or metals on water, and when burned out the air combines with oxygen to form water. It is a necessary element of life.

Hydrography, the science of water measurement, as applied to seas, rivers, lakes, currents, rocks, reefs, etc., and embracing the whole art of navigation.

Hydrometer, an instrument for measuring the specific gravity of water and fluids generally, and especially for ascertaining the strength of spirituous liquors and solutions. It is usually in the form of a glass bulb, to the lower end of which a smaller bulb, containing mercury, is attached, which forces the instrument to sink into the liquid which it is to test. The larger bulb has a scale fixed to it and the indication on this scale of the sinking point shows the specific gravity. There are many varieties: Twaddell's—a pear-shaped bulb containing mercury; Beaumé's, of similar construction, but applicable to liquids both heavier and lighter than water; Sykes's largely employed for determining the strength of alcohol; and Nicholson's, used for taking the specific gravities of both solids and liquids.

Hydropathy, the science of water treatment of diseases, which has been practised more or less from the earliest times. In modern days this science has been greatly systematised, and hydropathic establishments of an extensive kind have been set up in many healthy resorts. As to the medical value of the cold-water cure there is little doubt that the general conditions brought about by hydropathic treatment—such as baths (sulphur, electric, mustard, medicated, etc.), packs, fomentations, etc., together with the accompanying advantages of pure air, exercise, and rigid dietary—have in most cases a salutary effect. In the later developments of hydropathy a prominent part has been played by Mr R. Metcalf, one of the very earliest and most successful of its professors, at the well-known "hydro" at Richmond, Surrey, where moderate charges and efficiency of treatment rule.

Hydrophilus, the largest genus of water beetles, including the giant water beetle, which is of a shiny black and measures 1½ inches in length, and is common in N. America. There is also a European species (*H. piceus*), which is not quite so large.

Hydrophobia, rabies resulting usually from the bite of a mad dog; a dreadful contagious disease the result of a specific poison, for which it is claimed Pasteur's method of inoculation is an antidote.

Hydrostatics, the science of the pressure and equilibrium of liquids that are non-elastic.

Hydroses are, zoologically, a low order of water animals of the *Coelenterata* sub-kingdom, and in structure similar to the hydra. There is a sac with a mouth at one end, and at the other a disc by which the animal fixes itself to some other body. The

body comprises an outer and inner membrane, with stomach cavity, and prehensile tentacles. **pit** is a widely distributed and endlessly varied genus.

Hydrus, a constellation of the southern celestial hemisphere introduced by Bayer, in the 16th century, comprising three stars of the third magnitude, and situated to the south of Eridanus; commonly called the Southern Snake.

Hygiene, the science of health in its broad significance, the study of sanitary conditions, and the application of the laws of health generally. The progress made in hygienic science during the last hundred years has been highly important, and has led to many legislative enactments and preventive measures which have resulted in a great improvement in the general standard of public health.

Hygrometer, an instrument for measuring the moisture of the atmosphere. That of Daniell is the best known, and consists of a bent glass tube, with two bulbous ends, one of which is enclosed in a muslin covering, while the other is of black glass, with a thermometer and a quantity of ether inside. By the dropping of ether on the muslin bulb a connecting evaporation is set up which enables the measurement to be taken. A very simple kind of hygrometer is composed of a wet and dry bulb each supported by a thermometer affixed to a frame on which a scale drawing appears. The two mercury columns act upon a movable index point which indicates the degree of humidity.

Hymanoptera, the order of insects of which bees, wasps, hornets, ants, and sand-flies are the most familiar examples. They are notable for having four wings, the hind pair smaller than the front pair, to which they are attached. They have mouths and tongues which enable them to bite and suck, and the females possess an ovipositor, used both for depositing eggs and stinging. Nearly a quarter of all known insects are of this order.

Hypopotamus, the name given by Sir Richard Owen to a genus of fossil animals of the hypopotamus order, remains of which have been found in England and other parts of Europe in the Tertiary strata.

Hyperbole, a rhetorical term implying extreme exaggeration for the sake of effect, and often indulged in by emotional orators, as well as in ordinary speech.

Hyperboreans, a fabled people which the ancients believed existed beyond the region of the north wind, and later the term has been applied to the actual people of remote Northern lands.

Hypersthene, a crystalline mineral of a grey-green colour, found foliated and massed in igneous and metamorphic rocks. It was at one time regarded as hornblende, and was called Labrador hornblende. It is a silicate of iron and magnesium, and has been met with in Cornwall, Northern Europe, the Tyrol, and North America.

Hypnotism, a somnambulistic condition of the body, induced by mesmeric influence, and involving temporary loss of taste, touch, sight, and feeling. The operator controls the will of the hypnotic subject to a large extent, but the power of producing the hypnotic state, as well as the peculiar nervous condition necessary to its being induced, is not common. Hypnotism, however, has been surrounded by so much exaggeration and imposture that it is still far from being accurately defined or understood. There have been instances of surgical operations performed while patients have been hypnotised, and many cases of hypnotic power being exercised for evil ends have been cited, but in these matters there is generally more mystery than reality.

Hypocaust, an arched fire vault or chamber through which heat is distributed to rooms above. Used in the baths of ancient Rome.

Hypostyle, an architectural term, designating a colonnade or pillared hall, such as in the famous hall of Karnak.

Hyposulphite, the "hypo" of the photographer, is a salt of hyposulphurous acid; hyposulphite of sodium is largely used in medicine.

Hypothec, a Scottish legal term implying a landlord's lien on his tenant's cattle, sheep, and produce

for rent. No right of hypothec has existed since 1880, where the land exceeds 5 acres.

Hypothenuse, the name given in geometry to that side of a right-angled triangle which is opposite to, or subtends, the right angle.

Hypothesis, an imaginary theory set forth in such a manner as to illustrate by parallel the force of some other theory which it is sought to demonstrate.

Hyrax, a peculiar animal of the Hyraccidae family possessing a cleft upper lip like the hare, molar teeth shaped similar to those of the rhinoceros, and in other respects showing ordinary rodent characteristics. It has a brown fur, and is confined to Africa, Syria, and Arabia.

Hyssop, a labiate plant, with blue flowers, growing wild in Southern Europe, and yielding a kind of camphor; at one time largely used medicinally as an anti-spasmodic and carminative.

I

Iambic Verse dates from the time of the classic poets, and has been a favourite form of verse of succeeding times and many countries. Its characteristic is alternate short and long syllables. It is the ordinary heroic measure when it rhymes in couplets, and unrhymed is blank verse; of a line must consist of five feet, a foot being a short and long syllable.

Ibex, a wild goat found in the mountain regions of Europe, Asia, and Africa. It is of a reddish-brown colour, and has exceedingly large curved ridged horns.

Ibis, an Egyptian bird found mostly in lakes and swamps. It has white and black curved plumage and a long curved beak. One species is the sacred Ibis of Egypt, which is held in great veneration by the people. There are 20 species in all.

Ibycter, a South American Gallinaceous eagle, mostly black in plumage, and belonging to the Falconidae family, genus Aquilinae. Its head is almost bare of feathers, and it has circular nostrils.

Ice is water frozen to a solid condition, but lighter than water. It is brittle and transparent, and has a specific gravity of nearly 0.92. Ordinarily ice is produced naturally in cold seasons, freezing beginning at 32 deg. F., but it is also obtained in enormous quantities artificially by means of ice machines for domestic and commercial purposes.

Icebergs are detached masses of a glacier which subside into the sea and float as wind or current may take them. The North Atlantic is the chief home of icebergs, which reach the ocean from the ice-clad plateaux of Greenland. Some of these floating masses of ice are of enormous proportions, and constitute in the spring and early summer seasons a great menace to the safety of ships, as was disastrously shown in the *Titanic* catastrophe of 1912.

Iceboat, a boat used either for breaking a passage through ice, in which case it is usually steam propelled; or a boat with masts and sails and mounted on runners for sailing on the surface of the ice.

Ice-breakers are heavy bow-poled boats used for breaking up ice on navigable waters, and, on the Baltic and on the St. Lawrence in Canada especially, have the effect of considerably shortening the ice-bound period each winter.

Ice-floe, a small ice-field or sheet of floating ice, liable to be frozen to other ice-floes, imprisoning any ship enveloped.

Iceland Dog, a kind of white shaggy dog which was in former times a great domestic favourite, but is now little seen in this country.

Icelandic Literature, the Old Norse, which includes numerous works of poetry, mythology, and history of considerable interest and importance.

Iceland Moss, a kind of lichen growing in great quantities in the mountain regions of Iceland and other Northern countries. It possesses certain nutritive qualities and is of some value in medicine.

Iceland Spar, a colourless form of calc spar, frequently found in association with metallic ores; it is called also double-refracting spar, and its prisms are used for the polarisation of light.

Icen, an ancient British race who in early times lived

in Norfolk and other parts of Eastern England. Their most famous ruler was Queen Boadicea, who led her people against the Romans.

Ice Plant, also called "dew plant" and "diamond plant," is a native of Greece, the Canaries and some parts of Africa. It derives its name from the fact that it is covered with watery pustules that look like ice.

Ice-sheet, a term designating an extended glacier, occupying large territories, such as the Antarctic Continent of Greenland. Ice-sheets are of immense power and in their onward course assume a mighty force. The term also refers to the geological glacial formation of a former period.

Ishabod, signifying "the glory is departed," was the name of the son of Phineas, born after the latter was killed in fighting against the Philistines.

Ichneumon, a carnivorous animal of the civet family, abounding in Egypt, where it is popularly known as "Pharaoh's Kat," and is of great use in checking the multiplication of reptiles. It is frequently domesticated, and performs useful service in keeping down pests.

Ichneumon Fly, a numerous order of hymenopterous insects abounding in many lands, and all having the one peculiarity of depositing their eggs in the bodies of other insects. It destroys swarms of caterpillars, who become the unwilling hosts of its progeny.

Ichthyography, the art of drawing plans of everything connected with the ground floor of a building or site.

Ichthyol, a liquid used for rubbing on the skin in certain diseases, and obtained by distillation of a mineral in which fossil fish is found.

Ichthyology, the department of zoological science which concerns itself with the structure and variation of fishes, their habits and distribution.

Ichthyornis, a fossil bird discovered in the cretaceous strata of Kansas, and supposed to afford evidence of the evolution of birds from vertebrates, having had teeth though otherwise of bird form.

Ichthyosaurus was a gigantic lizard of the mesozoic age. The fossils are mostly found in the lias formation. Some were not less than 30 feet in length, and are shown to have been amphibian.

Iconoclasts were originally an Eastern sect of the 8th and 9th centuries, whose object was to prevent the worship of, and to destroy, images used in religious rites. The term has been applied in modern times to enemies of religious beliefs; generally Charles Bradlaugh was for a long time known as "Iconoclast."

Idea, in its platonic significance, had reference to what a thing seemed rather than the actuality, but in later philosophies an idea is, as Locke expresses it, "whatsoever the mind perceives in itself."

Idealism is the theory, according to Kant and other philosophers, that "objects are not there till they are thought." Idealism, however, takes many shapes—the transcendental, as with Kant, the subjective, as with Fichte, and the absolute, as set forth by Hegel.

Idea were distinctive periods in the ancient Roman Calendar being the eighth day after the nones in each month.

Idioelectric, substances, which manifest electricity in their natural state.

Idiograph, a mark, signature, or flourish peculiar to any individual; a trade mark is an idiograph.

Idiom, an expression characteristic of a country, district, dialect or language, which usually gives strength and force to a phrase or sentence. The idioms of a language are its distinctive marks and the best writers are the most idiomatic.

Idiothalamum, a tribe of lichens, having shields first closed, then open, with the nucleus made up of gelatinous naked spores.

Idolatry, the worship of idols, images, inanimate objects, animals or symbols. A kind of idolatry existed in all primitive modes of existence, and instances are known in the earliest records. Idolatry, however, as we now understand the word, is mainly applied to the worship of idols among the Indian, Chinese and other races where ancient super-

stitions and practices survive. In their more symbolised form images have a considerable part in the rites of the Roman Catholic Church.

Idols are images or effigies which are made objects of worship and are usually of wood or stone, but sometimes of ivory or more precious materials, and attain their symbolic significance after being put in the places destined to receive them, when they are made objects of veneration by some religious dedication. It does not detract evidently from the superstitious potency of an idol that it may have been manufactured in Birmingham.

Idris, a famous giant belonging to the myths of Wales, commemorated by a chair of rock on the top of the Cader Idris mountain.

Idyll, a poem or story of a simple or pastoral character dealing with rural characters and events for the most part, but sometimes used in a broader sense, notably in Tennyson's "Idylls of the King," which are of a distinctly imaginative form.

Ignatian Epistles bear the name of St. Ignatius, and in their several forms exercised great influence in mediæval times, but fierce controversy raged around them in the 17th century, because of their strong support of episcopacy, and a good deal of doubt was thrown upon their genuineness.

Igneous Rocks are such as have been caused by the action of great heat, or volcanic disturbance, and include two main groups—volcanic or eruptive and plutonic or intrusive.

Ignis Fatuus, or "will-o'-the-wisp," a phosphorescent light which may often be seen on summer and autumn evenings hovering over marshy ground. Its nature is hardly understood, though it is generally believed to be the result of the spontaneous combustion of decomposed matter. In olden times when marshy grounds were more common than now, this "dancing light" was very frequently visible and was regarded with superstition.

Ignorantines, a Roman Catholic Order founded in 1575 by the Abbé de la Salle, Canon of Rheims, and intended for special ministrations among the children of the poor. The name "Ignorantine" was given to them because of their being prohibited from learning or teaching Latin.

Iguana, a large South American lizard of very peculiar structure, with a long tail, a scaly back and head, a thick fleshy tongue and a prominent dewlap in the throat. It averages from four to five feet in length, lives mostly in trees, and its flesh is good eating.

Iguanodon, an animal of the iguana family long extinct, whose fossils are found in the cretaceous rocks. It must have been an ungulate creature. A skeleton unearthed in Belgium stands 14 feet high and is 28 feet long. They are supposed to have walked on their hind legs.

Ilex, an evergreen oak that flourishes best in Italy, though thriving well in England and other countries.

Iliad, the great epic poem of ancient Greece, supposed to have been written by Homer, though, according to some modern critics, the poem represents the conjoint work of many authors. The story it deals with is that of the "Siege of Troy," which had its origin in the attempt to re-capture Helen, who had been carried off from Sparta by Paris. It is a wonderful gallery of portraits of heroes and warriors and gods and goddesses, and maintains the true epic level throughout.

Illuminated MSS. of great value and beauty of decoration exist in most public museums and in many private collections, some of them hung of great antiquity, especially those of ancient Egypt executed on papyrus. Greek and Latin specimens are also numerous, and the British Museum contains fine examples of all these kinds, and also an extensive collection of mediæval English MSS.

Illuminati, the name by which certain religionists of the 16th, 17th and 18th centuries were known. They claimed the possession of superlative knowledge in everything pertaining to religious doctrines, rites and ceremonies, but were not at any time a very numerous body. An Order of the Illuminati was formed at Ingolstadt which was a secret society, and professed to free religion and politics from super-

stitution and despotism. It had some similarity to Freemasonry.

Illusion may take the form of a mental image of something non-existent, or be produced by a juggler's handling of objects so as to deceive the eye.

"Illustrated London News," the first of the weekly pictorial papers to be published in England. It was originated by Mr. Herbert Ingram, a Boston printer and newsagent, in 1842, and was a pronounced success from its foundation. The idea occurred to Mr. Ingram after he had noticed what an immense "run" there had been on a few crude pictures which one of the ordinary weekly papers had given of incidents connected with the Gretna murder.

Ilvaite, a mineral substance found in the island of Elba and other places on the Mediterranean in black prismatic crystals, being a silicate of iron and calcium, sometimes called "heavite."

Ilyanthides, a family classed in zoology as *Zoantharia malacodermata*, having polypes single and free, with a rounded or tapering base, and destitute of corallum.

Ilybius, a water beetle of which there are many species in Europe and America. The peculiarity of this genus is a convex form of body and a labial palp whose penultimate joint equals the last joint in length.

Idols, in the form of carved, sculptured, or painted objects, have been regarded as aids to worship, not only by primitive races, but in various Christian churches from early times, but since the Reformation have been prohibited in the Church of England.

Imagination is the creative power and faculty enabling the mind to picture to itself scenes, events, and persons of which a person may hear or read, and in its more intense form constitutes the genius by which the poet, the novelist, the historian, the painter, and the musician attain their idealisations.

Imaum, a Mahometan religious title borne only by princes or leaders of the faith; the Sultan of Turkey, in his ecclesiastical capacity, bears this title, and by virtue thereof may conduct the service in the mosque.

Immaculate Conception, the dogma that the Virgin Mary was absolutely pure and sinless from the womb, after being a fierce subject of controversy for many centuries, was on December 8th, 1854, expressly proclaimed by Pope Pius IX. to be an established doctrine of the Roman Catholic Church. The 8th December is the festival day of the Immaculate Conception in the Roman Church, and the 9th December in the Greek Church.

Immolation, the act of sacrificing a living object or objects for the propitiation of the Almighty, or, in classic days, the gods.

Immortality, the theory of the eternal existence of the human soul.

Immortelles are wreaths, crosses, or other designs made from what are called everlasting flowers, which are obtained from certain plants of the Composite order, and retain their colour and compactness for a long time. Immortelles are largely used as emblems for decorating graves, especially in France.

Impact, the impingement of two bodies one against the other, a subject generally considered in relation to the resulting after-motion, which comes under the cognizance of Kinetics. Direct impact is the opposition of objects moving in the same direction, oblique impact is the collision of bodies moving in opposite directions.

Impeachment, a special arrangement, usually before Parliament or other high tribunal, of a person charged with some offence against the State. The custom in England is for the impeachment to be made in the House of Commons, and the trial to be before the House of Lords. Bacon, Warren Hastings, and Lord Melville are conspicuous instances of men impeached in this country.

Impennes, the scientific name of a family of swimming birds, of which the penguin is the leading representative. They are all short-winged and unable to fly. The divers and the auks belong to the tribe.

Imperial Federation was inaugurated as a public movement in 1884 by the formation of an Imperial Federation League under the presidency of the late

Right Hon. W. E. Forster, and after preparing a practical scheme for promoting its objects, dissolved itself at the end of 1893, leaving to other organisations the carrying forward of the idea. Among these are the United Empire Trade League, the British Empire League, and the Federal Union Committee, all having offices in London, with branches in the Colonies and the provinces.

Imperial Institute, founded in 1887 as a memorial of Queen Victoria's Jubilee, and formally opened by her Majesty in 1893. Its object is to bring together into one permanent exhibition the products of the various British Colonies and dependencies, and generally to collect material, statistics, and general information relating to the condition of the various places. Since 1902 it has been under the control of the Board of Trade. The University of London occupies part of the building.

Impluvium, a basin or tank in the hall or atrium of an ancient Roman house, serving the purpose of receiving the rain that dropped through the open space in the roof.

Impressionist, an artist or author who attempts in his work to convey by broad effects of colour or treatment the impressions which a subject has stamped on his own imagination, apart from detail or form. (See **Post Impressionism**.)

Impressment, the forced service of persons for service on board British war-ships, sanctioned by laws still unrepealed, but not resorted to in this country since the Napoleonic wars.

Imprimatur, originally an official licence to print, and an important formula in the early days of printing. The term is now used in the wider significance of authority, stamp, or endorsement.

Impromptu, a speech, writing, or musical composition produced on the spur of the moment, without study or preparation. The word covers a wide field, however, and especially in musical works includes much that is intricate and elaborate.

Impropration, a legal term signifying the surrender of a benefice and its revenues into the hands of a layman or lay corporation, carrying with it the obligation to provide for the continuance of the ecclesiastical duties.

Incandescent, glowing white with intense heat.

Incandescent Light is produced in electric lighting lamps by a thin metal filament, which, acted upon by the electric current, attains an intense white illuminating force; in gas-lighting the incandescent illumination is obtained by a cone-like "mantle," made of incombustible earthy substances, which is placed over the part where the flame plays.

Incarnation, in theology, designates the doctrine that the Divine Spirit, incarnated in human form in the person of Jesus Christ, has had actual existence on earth, subject to human limitations, yet without losing the Divine essence.

Incas, the title borne by the ancient rulers and princes of Peru.

Incense, an aromatic resinous substance which, under combustion, exhales a pungent odour, and is used, mixed with certain fragrant perfumes, in the celebration of Mass in Roman Catholic Churches. Olibanum or frankincense is ordinarily the leading ingredient. It is not permitted in the orthodox service of the English Church, and when used by the more pronounced Ritualists is in defiance of ecclesiastical law.

Incognito, the dropping of name, identity, or distinctive mark, so as to pass unknown. A term generally used in cases of persons of rank who conventionally take an assumed name or inferior title in order to escape ceremony and formality.

Increment, Unearned, the term applied to the increase which arises in the value of land or buildings from causes other than the efforts or exertions of the owners, and in the Lloyd George Budget of 1909 first brought within the range of taxation.

Incubation, ordinarily the artificial hatching of eggs by means of an apparatus called an incubator (see **Incubator** article in *Pears' Dictionary of Poultry and Cage Birds*); a term also applied to conditions of heating and feeding by which children

prematurely born or exceptionally feeble are nurtured and brought forward.

Index Expurgatorius is an index, prepared under the authority of the Roman Catholic Church, of such books as may not be read by the faithful at all, and such as can only be read in part; that is, with what are considered objectionable passages expunged. The first Expurgatorial List was issued by Pope Paul IV. in 1557, and all later lists have been under direct papal authority.

India Office Library (see **Library of the India Office**).

India Rubber, or Caoutchouc, is made from the juice extracted from certain tropical plants, and is the most elastic substance known. It is treated and undergoes coagulation in moulds, after which it is dried and sent to market. Its commercial utility is considerable, being presented in many different forms, as eboules or vulcanite, and for waterproofings. The use of rubber for motor tyres has greatly increased the demand for this article. The consumption has been increased more than tenfold within the last few years. The uses to which rubber is put is being extended year by year; meanwhile plantations of rubber-yielding trees are being started in all regions favourable to their growth. There are large rubber estates in Ceylon, Java, and the Straits Settlements, but the native forests of South America still yield the largest quantities of the raw material.

Indian Corn, the American name for maize (*Zea mays*).

Indian Cross, the genus *Tropeolum*, an ornamental climbing or creeping garden and greenhouse plant.

Indian File, marching forward in single formation, as Indians progress through the woods.

Indian Ink, a pigment made from lampblack and gum or glue, originally prepared in China and Japan. It is dried and is marketed in small sticks. It is used mainly by artists for shading and lettering.

Indian Mutiny. This turning-point in the history of modern India occurred in 1857-8. The ostensible cause was the serving out to the native troops of cartridges greased with animal fat, contact with which was forbidden both by the Hindu and by the Mohammedan faith; but underlying this a rebellious feeling had long been secretly developing, fanned by Nana Sahib and others, and when the Sepoys at Meerut, in May, 1857, not only refused to obey the English officers but overpowered and put them to death, the Mutiny spread like wildfire, the rebels took Delhi and Lucknow, and during a period of many months the most terrible massacres and atrocities were committed, men, women and children being slain in thousands. The English General heroes of the Mutiny were Sir Colin Campbell, Sir John Lawrence, and Sir Henry Havelock, but heroism was shown by British soldiers and civilians everywhere during that terrible time. Order was re-established in the autumn of 1858, when the governing power was transferred from the East India Company to the Crown.

Indictment, a formal document of accusation setting forth the criminal charge or charges upon which a person has to be tried before a proper tribunal. It represents the "indict" of the grand jury, and is framed on the "true bill" returned by that body.

Indigo, the substance obtained from certain plants of the *Indigofera* order, inhabitants of the tropical regions of Asia, Africa, and America, India being the chief producer of the country. The colouring matter is the result of the decomposition and fermentation of a glucoside contained in the plant. This is afterwards dried and becomes the caked indigo of commerce. There are numerous varieties of indigo formed by the admixture of other colouring substances. The discovery of *Indigotin*, obtained from coal tar, has in late years largely superseded the use of vegetable indigo in dyeing and is more uniform in strength.

Individualism, a principle of government diametrically opposed to Socialism, and favouring freedom of action on the part of individuals without the interference of the State.

Indium, a scarce lead-coloured metal found in zinc

blende in Saxony, and remarkable for presenting a blue line in the spectrum.

Indo-European, a term used to designate the Aryan family of languages, which embraces Indian, Iranian, Celtic, Greek, Italic, Slavonic, and Teutonic.

Indra, an ancient Hindu God, personifying the sky; the supreme object of worship in Vedic times.

Induction, in Logic, is an argumentative inference in regard to an entire class of facts, based on actual demonstration as to individual facts comprised in that class. In Natural Philosophy it is a term applied to the action or effect produced by an electrical or magnetic body upon a non-electrical substance near to it but not in actual contact.

Induction Coil, a machine for producing electric currents by induction. It consists of a soft iron cylinder, or a mass of straight iron wires, around which is wound a primary coil of silk-covered copper-wire, whose ends are attached to a galvanic cell, while around the primary coil, still another, the secondary coil, of finer copper wire and of considerably greater length, is coiled. One coil is carefully insulated from the other, and the different parts of the secondary coil are also insulated from each other. The current is generated in the secondary coil by induction every time the current starts or stops in the primary. A rapid series of alternating currents is thus set up of a very high tension. Sparks many inches long and of great brilliance are obtained by large induction coils.

Indulgence, a remission of penances or punishment for sins, formerly granted by the Pope in return for contributions in aid of religious purposes. The indiscriminate sale of Indulgences by Tetzel and other Papal agents in the 16th century was one of the grievances which led to the Reformation.

Indulgence, Declaration of, was the proclamation by which James II. suspended the penal laws against Roman Catholics and Dissenters. It was first issued in 1687 and again in 1688, but the clergy as a body refused to obey and the prosecution of the Seven Bishops followed, as did James's abdication.

Induline, a general name for a class of coal tar dyes used for various fabrics, all giving forth dark blue shades.

Industrialism, the pursuit and practice of the industrial arts and a devotion to them in their broader aspects, as a leading cause of progress.

Inertia, a matter, mass, or body which has not within itself the power of motion, or which moves only with uniform action in a rectilinear line. Force only can transform inertia into energy.

Inescutcheon, a small "cutcheon borne heraldically within the shield of ordinary dimensions.

Infallibility, the Roman Catholic doctrine that accords the Pope divine immunity from error, in the execution of all that pertains to his pontifical functions. It was first proclaimed as the dogma of the Church by the Vatican Council in 1870.

Infante, the title of any son but the eldest of the king or queen of Spain or Portugal. *Infanta* is similarly the title of any daughter except one that might be heiress to the throne.

Infantry, the portion of an army which consists of foot soldiers equipped with "small arms."

Infection, the change or deviation experienced by light as it moves over the edges of an opaque body, causing the scattering of coloured rays.

Influence, the arrangement of flowers upon a branch or stem; it may be terminal or axillary.

Infula, a sacred fillet, of woollen material, worn on the head by priests, and by magistrates and rulers on solemn occasions, also by persons fleeing for protection to sanctuary. The infula later became a pendant to the mitre of bishops.

Infusoria, a class of infinitesimal animalcule of aquatic habits, possessing a mouth and some sort of digestive organism, but for the most part only observable under the microscope. They are the most highly developed form of Protozoa.

Ingoldsby Legends, a series of ingenious fantastical stories, mostly in racy verse, written by the Rev. R. H. Barham, and first published in *Bentley's Miscellany* about the middle of the 19th century.

Ink, a liquid pigment ordinarily made from an infusion of nut-galls, coppers, and gum arabic. Spumac is substituted for nut-galls for inferior inks. An acid is sometimes added to prevent oxidation, and for the blue-black inks a small quantity of solution of indigo serves for colouring. Copying ink contains glycerine or sugar, which keeps the ink moist. Lampblack is the leading ingredient in printer's ink. Marking ink is composed of a solution of nitrate of silver, gum, ammonia, and carbonate of soda. For red, blue, and other coloured inks, colouring solutions are used.

Inlaying is the introduction of one class of substance into another in some artistic or other design, such as silver set into zinc, copper, or lead, and called *Bidri*; the insertion of gold and silver into iron or steel, which is *Damascening*; the mingling of brass with tortoiseshell—*Buhl work*; the inlaying of woods, *marquetry*; of stones—*pietra dura*; and of the arrangement of small pieces of stone, for floors, walls, etc.—*mosaic*.

Innocent's Day, a festival day in Roman, Greek, and Anglican churches in commemoration of the killing of the children of Bethlehem by Herod, December 28th.

Inns of Court, certain legal corporations in London enjoying the privilege of calling candidates to the bar after they have studied for a certain number of terms and passed certain examinations. The Inns are four in number—the Inner Temple, the Middle Temple, Lincoln's Inn, and Gray's Inn.

Inquisition, a Roman Catholic ecclesiastical court which became a formidable weapon of the Church in the 13th century under Pope Innocent III. in dealing with charges of heresy. It was effectively set up in the various Catholic countries of the Continent, obtaining its fullest and most sweeping organisation in Spain in the days of Ferdinand and Isabella, when Torquemada was made Grand Inquisitor, and used its powers with terrible severity. (See *Auto-da-fé*.) In the 18th century its influence began to wane, and although the Congregation of the Holy Office still exists at Rome, its jurisdiction is limited to the suppression of heretical literature. Not less than 30,000 persons are supposed to have suffered death in Spain alone in pursuance of the sentences of the Inquisition. The institution ceased to exist in France in 1772, in Portugal in 1820, and in Spain in 1834.

Insectivora are animals which live almost exclusively on insects and worms, and comprise hedgehogs, moles, shrews, etc.

Insectivorous Plants are of various orders, and are found in all parts of the world, the *Common Sundew* and the *Common Butterwort* being the best known British species. These plants are provided with a leaf (or flower) arrangement by which insects are attracted. A gummy secretion spreads over the surface, and when an insect gets entangled the glandular hairs close over the victim, and escape is difficult; whereupon the plants absorb the life-essence of the captured insects by a process of digestion.

Insects, a term applied to an extensive class of invertebrate creatures abounding in all parts of the world. Their bodies are usually segmented, they possess wings, and have commonly four or more legs, in addition to a pair of antennae and a pair of mandibles. Flies of all kinds, fleas, bugs, butterflies, moths, bees, wasps, grasshoppers, crickets, beetles, lice, and thousands of other species make up this wonderful order.

Insectores, a bird classification which included all perching and climbing birds, but which are now included in the *Passeres* and *Picarie* orders, comprising some two-thirds of all existing bird species.

Insignia, marks or badges of office or honour, such as stars, ribbons, crosses, medallions or other designating objects, worn by members of special Orders or holders of prominent offices.

Insolvency, the condition which marks a man's or a firm's inability to meet their full monetary obligations. When a person is in this strait, he can either call his creditors together and endeavour to come to some private arrangement with them, according to the nature of his assets, or he can place himself in the hands of the Bankruptcy Court, which will administer

the estate and distribute the assets for the benefit of the creditors.

Inspector General, a chief army officer who in the present British Army system fills the place formerly occupied by the Commander-in-Chief, a title abolished in 1904.

Inspiration, in *theology*, means the direct influence of the Supreme Being in the writing of the Scriptures, and, like all other matters of religion, has been subjected to many definitions. Thus, we find endless discussion regarding *verbal inspiration*; as to *plenary*, all in all, inspiration; the *moral inspiration*; the *dynamical* inspiration, meaning in its action on the natural faculties; and *mechanical*, which only regards human agency as an instrument.

Instinct, a mental quality possessed by all organised beings in a more or less degree, but more especially revealed in the lower animals, and consisting of an intuitive prompting which induces the adoption of certain actions which conduce both to individual and racial preservation.

Institute of France was formed in 1795, and after various modifications was in 1820 organised on its present basis. Its five divisions are—French Language and Literature, Belles Lettres, Science, Fine Arts, Ethics and Politics. It is restricted to 40 members.

Insulation, the condition in which an electrified body is prevented from communicating electricity to contiguous bodies, by the interposition of a non-conducting material. Glass, shellac, ebonite, and gutta serena are all non-conductors, and wires obtain insulation by wrappings of cotton or silk.

Insurance Act. The provisions of this Act are set forth in the *Office Compensum* section, see *see*.

Insurrection, a rising against constituted authority by a body of persons aiming at the removal of a grievance or the upsetting of Civil power. Less serious than a rebellion, it is more widespread than a mutiny and often develops into revolt or revolution.

Intaglio, engraving or carving on a sunken ground, a method frequently adopted in the ornamentation of stones and rings.

Interdict, a Roman Catholic ecclesiastical prohibition, directed either against a country, community or church, or against persons. It is a weapon that is now rarely used, but in former times was often exercised with great power and severity.

Interest, in its commercial sense, is payment made for the loan or use of money, and is calculated according to a specified rate. Interest is either *simple* or *compound*. When simple interest is paid the principal sum remains the same; in the case of compound interest, each year's interest is added to the principal, and succeeding interest calculations are on the increased amounts.

Interlude, any short stage piece, or brief musical composition, for performance between more important pieces. In the strict musical sense an interlude is an *instrumental* composition played between the acts.

Interval in Music indicates the distance between two sounds, and may be *unlike*, as when sounded successively, or *harmonic*, when sounded together.

Intensification, an ultra-republican party whose chief members were very active and aggressive in France, Italy, and Spain, thirty or forty years ago. Henri Rochefort was a leading representative.

Introit, the processional psalm or hymn formerly sung as the clergy entered the church to commence divine service.

Invention of the Cross, a Roman Catholic festival, held on May 2nd to celebrate the finding of the Cross at Jerusalem by Heraclius in 615. Also included in the Church of England calendar. (See *Holy Rood*.)

Inventions in Demand. Among the simple inventions that are awaiting evolution, and any one of which would bring a fortune to its inventor, the following may be considered worth noting:—A bottle which cannot be re-filled; a nut for bolts which will not shake loose; a substitute for indiarubber; a non-leaky tap; a smoke-consuming appliance; a cigarette lighter, usable in wind; a simple rangefinder; a non-explosive lamp for low-flash oil; a good pencil.

sharpener; artificial sponge; an efficient stopper or easy means of drawing corks; a means of driving away flies.

Invertebrata, the zoological term used to designate all such animals as are without backbone or other internal bony framework.

Investiture, the ceremony of conferring honour, office, or possession—the investment of the recipient with badge, token, or public recognition.

Invitation, a form of magic or witchcraft that prevailed in olden times, consisting of pricking a wax or clay image of a person whose death was desired, invoking simultaneously the aid of evil spirits, the belief being that the spell would have a fatal effect.

Iodine, a substance formerly exclusively obtained from the extracted ash of seaweed. After the salts have been removed by crystallisation, there is left in solution iodide and bromide of sodium, potassium, and magnesium, and these heated with chemical agents yield iodine. Nearly all iodine now in use is derived from Chili saltpetre (sodium nitrate). Many combinations are effected with iodine, some of which are of considerable commercial value and of use in medicine.

Ionio Order of architecture is one of the five classic orders, its leading characteristics being the volute of its capital, which has on each side distinctive curved or scrolled ends.

IOU, an informal written and signed acknowledgment of indebtedness, requiring no stamp, and, though not a promissory note, can be sued upon. The letters stand for "I owe you."

Ipeacuanha, a flowering plant of the Cinchonaceae order, a native of the Brazilian forests. Its root is of great utility in medicine.

Irade, a decree promulgated by the Sultan of Turkey.

Irestone, a general name for any hard rock.

Iridesence, a glittering, rapidly changing glow of colours, showing different hues in different lights, and having the constantly shifting sheen and lustre of shot silk. Glass, metals, and fabrics are rendered iridescent by chemical treatment.

Iridium, one of the heaviest known metals, found in alliance with platinum. It is silver-white in colour, is of considerable commercial value as an alloy, and is in general use for the making of standard weights on account of its durability.

Iris, the typical genus of the botanical order Iridaceae; an order of herbs or under-shrubs of the Endogene family, with tuberous or fibrous roots and flag-like leaves, many of the family having beautiful flowers.

Irish Elk, an extinct species of deer, of large size and enormous antlers, fossil remains of which have been found in the Irish bogs, also in the Isle of Man.

Irish Moss, a kind of seaweed found on certain parts of the Irish coast, and collected, dried, and bleached for use as cattle food or for making a nutritious jelly.

Irish Parliaments of a non-elective character existed in Tudor times and earlier, but they had no independent power until 1782, when Grattan succeeded in securing some measure of freedom from English parliamentary control. But no Roman Catholics were allowed to sit, the King refusing to assent to an Act for admitting them, and, finally, after the rebellion of 1798, and the winning over of the Irish members by money and otherwise, the Act of Union of 1801 abolished the Irish Parliament. It is to secure to repeal of this Act and obtain enlarged powers that the Home Rule agitation is directed.

Iron, the most abundant as well as the most important of the world's metals, but occurring in a free state only in meteorites and some lavitic lava found in Greenland. Iron is extracted by smelting from different ores, hematite, magnetic iron, and spathic iron, coal or coke being now universally used for smelting purposes. The kinds of iron produced are: cast iron, wrought iron, and steel. The total amount of pig iron produced throughout the world in 1911 amounted to about 65,000,000 tons, contributed chiefly by the United States, Germany, and Great Britain, about 8 per cent. of the total being the product of these three countries. (See **Steel**, **Furnace**, **Bessemer**, etc.).

Iron Age, the period when primitive man made and used weapons and implements made from iron. It came between the Bronze and the Stone Ages.

Ironclad, ships of war cased in iron or steel plates of sufficient thickness to resist projectiles. They were first introduced (1859) in the French Navy, and in 1860 the first British ironclad, the *Warrior*, was launched. (See **Navy**.)

Iron Crown, the crown of the ancient kings of Lombardy and emperors of Germany, and noted for its iron band, said to have been forged from one of the nails of Christ's cross. Napoleon I insisted on being crowned with this famous crown, which is now preserved in the cathedral of Monza.

Ironides were Cromwell's special troopers, so-called because of their solidity and firmness in battle.

Ironwood, the intensely hard and heavy timber of certain kinds of trees, natives of the warmer regions of Asia and Africa, and mostly of the Sapotaceae order.

Irony, a sarcastic form of speech or writing by which blame appears in the guise of praise, and generally where the real meaning is contradictory to the expression.

Iroquois, the name of one of the tribes of North American Indians formerly constituting the Five Nations.

Irridentists, a political party organised in Italy in 1876 with the object of bringing under one government the various islands and places racially and geographically connected with Italy.

Irrigation, an artificial method of providing water for the growth of plants on lands where the natural supply of water is deficient. The science has made immense progress during the last fifty years, and has been the means of bringing into profitable cultivation vast tracts of territory in India and Western America which had previously been arid and wastes. The systems are various and are utilised according to the special conditions of the land to be irrigated, but the success which has attended these experiments has been very gratifying. In fact, irrigated lands are often more productive than lands which receive a fair amount of moisture from the elements; the irrigation supply can be distributed and regulated exactly according to requirements.

Iringlass, a gelatinous substance manufactured from the stomachs or air bladders of certain fish, the best kinds coming from Russia and Brazil. Some of the coarser sorts of iringlass are made from hides.

Islam, the Mohammedan religion, the word signifying devotion to God.

Isoamylene, a colourless, mobile oil, of peculiar odour, obtained by distilling isoamyl alcohol with zinc chloride.

Isobaric Lines are the lines on maps which link together places of equal barometric pressure.

Isomerism, a chemical term indicating a similarity of elements with differing physical or chemical qualities, and arises from the difference of the molecular atoms.

Isothermal Lines are lines appearing on maps showing the points on the earth's surface possessing an equal mean temperature.

Isthmian Games were held in alternate years by the ancient Greeks on the Isthmus of Corinth, in honour of Neptune, and were of the same class as the Olympian Games. Wreaths were the only prizes.

Itale, a kind of fibre yielded by the *Bromelia ciliaris*, a Mexican tree that grows immense leaves, from which the fibrous material is obtained. For carpets, cordage, sacking, belting, nets, etc. this fibre is very extensively used.

Itaka-wood, often called tiger-wood because of its markings, is a hard and beautiful wood furnished by the *Alseodendron Schomburgkii* of British Guiana. For ornamental cabinet work it is highly prized.

Itch-Mite, a minute insect which burrows beneath the skin and produces the itch. It is covered with short hairs, and two pairs of its four pairs of legs are provided with suckers at the ends. It belongs to the spider family, and is named *Sarcoptes scabiei*.

Iulus, the name of a group of animals of the centipede family with cylindrical bodies and two pairs of legs to each segment, the latter being 40 to 50 in number.

In South America specimens 5 or 6 inches long are frequent, but those found in England are very small.

Ivory, the dentine substance of which the tusks of the elephant, hippopotamus, walrus, etc., are composed. The tusks of the African elephant sometimes weigh as much as 100 lb., and reach a length of 8 or 9 feet.

Ivory-Black, a species of bone-black, made by the calcination of ivory scraps and turnings, used as a pigment in the manufacture of printers' ink, paint, etc.

Ivory-Gull, a small, beautifully-shaped, entirely white gull confined exclusively to the Arctic regions.

Ivy, the well-known climbing shrub, chiefly evergreen; furnishing a sudorific, the berries having also emetic properties.

Ixia, a genus of Cape Iridaceæ, with beautiful flowers produced in considerable variety of colouration under culture.

Izaz, a fixed star in the constellation Bootes.

J

Jaal Goat, the Abyssinian ibex, found also in Upper Egypt and in parts of Persia.

Jabiru, a wading bird of the stork family, white of plumage, but having a black neck and head, with a red band round the bottom part of the neck. Is a native of the tropical regions of South America, and almost equals the adjutant, which it resembles, in size.

Jaborandi, a Brazilian plant, the leaves and bark of which yield a powerful sudorific drug, and an alkaloid called jaborine; the South American Indians make great use of a decoction of the leaves in fever cases.

Jabutí, a Brazilian plant (*Psidium album*), furnishing an excellent dessert fruit.

Jacamar, a South American bird with long bill and brilliant plumage, of arboreal habits and similar in its general characteristics to the kingfisher.

Jacana, a tropical bird (the water-hen of Brazil and the warner parts of America) of wide range, beautiful of plumage, with slim body and narrow wings, and long pointed beak. It feeds on seeds and insects, inhabits marshy lands, and is of the crane and coot family.

Jack, a small schooner-rigged vessel, used in the Newfoundland fisheries; a pike; an oscillating lever; an apparatus for roasting meat.

Jackal, a kind of wild dog or wolf, plentiful in warm countries, of nocturnal habits, a carrion feeder, and of strong odour. Jackals hunt in packs, and make the night hideous with their discordant yells.

Jackboot, a kind of leathern boot reaching above the knee; in common use during the 17th and 18th centuries, but in modern days surviving only as foot and leg gear for fishermen, ostlers, etc.

Jackdaw, a small, blue-black plumaged kind of crow, common in all parts of Europe, and nesting frequently in steeples, old ruins, and hollows of trees. It makes an amusing peep, can be taught to utter words, and is famed for its mischievous propensities.

Jack Ketch, a by-name for the common hangman, and said to have been the real name of the public executioner of the time of James II.

Jack-tree, a familiar tree of the Indian archipelago, yielding a fruit called jack-fruit, much larger than the bread-fruit, but coarser.

Jacobins, a French revolutionary club or party, formed in 1789, and accustomed to meet at a Jacobin convent, hence the name. It became a controlling force in the Revolution, especially in the movement which led to the Terror, Robespierre being its chief spokesman.

Jacobites, adherents of the Stuart cause after the abdication of James II. First James himself, then his son (the Old Pretender), and later his grandson (the Young Pretender) tried to fan the flame of rebellion, in Scotland and Ireland, but after the defeat at Culloden in 1746 the cause was lost.

Jaconet, a kind of muslin at one time much in vogue as dress material, light, pliant and soft textured.

Jacquerie, a band of French peasants who in 1358 rose against the tyranny of the French nobles. Much desperate fighting occurred before the insurrection was put down.

Jade, a hard, transparent mineral found in China, America, and New Zealand, and used for making vases, bracelets, and other ornamental articles. There are many varieties, and there is evidence that the stone was in common use in prehistoric times for weapons and utensils.

Jagernaut, or **Juggernaut**, the name of the great Indian idol at Puri, which once a year is brought forth from its temple, placed on an enormous car, and conveyed at the head of a mighty procession through the streets. Multitudes of pilgrims assemble on these occasions, and it used to be the practice for many fanatics to throw themselves beneath the wheels of the car and allow themselves to be crushed to death.

Jaguar, an American carnivorous animal of the leopard family, but much larger and more powerful. It is the most formidable beast of prey on the American continent, and haunts the shores of the large rivers and lakes of Central and South America.

Jail, or **Goal**, a place of confinement for persons charged with or convicted of criminal offences.

Jalap, a drug made from the roots of certain herbaceous plants of the Mexican Andes, growing at an elevation of from 6,000 to 8,000 feet. The drug is one of the swiftest of known purgatives.

Jalpaite, a cupiferous Mexican sulphide of silver, malacca, blackish-grey, with isometric cleavage.

Jam, the popular name for boiled, sweetened, and preserved fruit, in which during the last half-century there has sprung up an important industry in London and different parts of the country.

Jamb, the upright sides of a door, window, fire-place, or other aperture, supporting the lintel, entablature or mantel and shelf.

Jangada, a rude sort of boat or catamaran, carrying a large sail, used off the coasts of South America.

Janis, an Indian religious sect, dating from 700 B.C., who reject the Vedas and live in many points in accord with the Buddhists. They are fairly numerous body, and are as renowned for their austere morality as for their wealth.

Janissaries, a former band of Turkish foot soldiers who acted as the Sultan's body guard, and were noted for their turbulence and cruelty. They existed from the 14th century to 1826, when they were finally disbanded after the people had risen against them and massacred many thousands.

Jansenists were followers of Jansen, Bishop of Ypres, who denied "the freedom of the will and the possibility of resisting Divine grace." They did not exist as an organised body after 1740.

Janthina, the "Ocean snail," is common to the Atlantic, and of peculiar formation. It has a violet shell, and possesses a sort of foot which it uses for propulsion.

Jantu, a water-raising trough contrivance, balanced on a bar. It is of considerable antiquity, and used yet in India and the East in irrigation operations.

January, the first month of the year, named after Janus, the two-faced god of the Romans. It was the *Wolf month* and *After Yule* of the Saxons.

Japanese Art is one of the many characteristic developments of a wonderful people. It is original, distinctive, of marked decorative sense, and shows a freedom and delicacy of handling almost beyond praise. Although in certain technical details it falls short of the best European standards, it has in its general realisations had a decided influence upon the decorative art of the world at large.

Japanning, the process of coating metal, wood, and other surfaces, with the varnish called Japan, which produces a lacquered effect and is capable of receiving a high polish.

Jarrah Wood, the wood of the mahogany gum tree of Western Australia (*Eucalyptus rostrata*), one of the hardest of all woods.

Jasmine, a graceful climber, with odoriferous blossom, originally a Persian plant, but now acclimatised in many varieties in almost all parts of the world.

Jasper, a precious stone of the quartz variety, opaque, and coloured red, brown, yellow and sometimes green. It was greatly esteemed by the ancients, the Bible having numerous allusions to it.

Jaunting Car, a two-wheeled vehicle peculiar to Ireland, containing a lengthwise seat on each side and a seat in front for the driver.

Javelin, a kind of spear which was thrown by hand and was one of the common weapons of war from the days of ancient Rome to the Middle Ages. A rude form of javelin is still used by many savage tribes.

Jay, a well-known bird of the crow family, of many species, and having a wide distribution, ranging from Europe, where there are six species, to South and North America, where the varieties are numerous. The Common Jay is the only British species. The Blue Jay of North America is a much handsomer bird, though smaller.

Jasarine, an antique military or protective jacket, strengthened by small overlapping pieces of steel or other metal internally, worn generally by the Italian nobility and those of neighbouring nations during the Middle Ages.

"Jaumes," a name brought into familiar use by Thackeray in his "Yellowish Papers," and since largely adopted in referring to footmen and flunkys.

Jeau, a stout kind of twilled cotton cloth much worn in olden times, and resembling fustian. Among modern varieties of Jean there is a satin Jean of a shiny surface, also "jeannette" used for linings.

Jebusites, are often referred to in the Old Testament. They were a Canaanite nation, who held Mount Zion, and were in frequent conflict with the Israelites, until finally defeated by David.

Jehovah, one of the Hebrew names of the Deity, the etymology of which is obscure. The English translators of the Old Testament rendered it "the Lord." The Jews, however, regard the word as too sacred for speech, and use the equivalents *Adonai* or *Elohim* instead of it.

Jelly-fish, the common name for a wide variety of fishes of gelatinous structure, such as aculephs, sea-bubblers, medusae, etc.

Jemadar, a native Indian officer of the British Army, or head servant of a large house in the Orient.

Jenny, the name given by James Hargreaves to the spinning frame invented by him in 1769, which greatly improved and extended cotton spinning operations.

Jeofail, a law term referring to the correction of some error in legal process.

Jerboa, an interesting rodent known sometimes as the "leaping hare," and sometimes as the "jumping mouse." It has very long hind legs and a long tufted tail. It is a native of the desert regions of Africa and lives in communities in underground passages. Its jumping power is extraordinary.

Jered, a wooden javelin, used in Turkey and Persia in tournaments and marksmanship competitions. It is about five feet long, and great skill may be attained in flinging it at a moving object or fixed target.

Jeremiad, any utterance or writing in which sorrow or complaint is the chief characteristic, so named as recalling the style of the "Lamentations of Jeremiah," one of the Old Testament books.

Jerkin, a short upper garment or jacket, made of leather or cloth, in common wear by men in the 16th and 17th centuries.

Jersey, the name given to a close-fitting garment of fine woollen yarn worn by both men and women, and a common garment of athletes, cricketers, etc.

Jerusalem Chamber, a room in Westminster Abbey, deriving its name from the circumstance of its having originally been decorated with a view of Jerusalem. Henry IV died in this chamber, and the Committee for the Revision of the Bible met there in 1870 and later.

Jesuits, members of the famous Roman Catholic order founded by Ignatius Loyola in 1534, have borne an influential part in the working out of the religious policy with which they have been identified. They were long regarded as "the power behind the Papal Chair," and in spite of their piety, devotion, and learning, the suspicion has rested upon them of having put their religious aims before their religious practices. They have been described as having no scruples, and as employing every possible art, device, or deception to attain their objects. The members of the society are composed of two classes,

laymen and priests, and a long and vigorous course of study is prescribed before they are admitted into the privileges of full membership. They are required to take the vows of voluntary poverty, perfect chastity, perfect obedience, and complete submission to the Pope. For their supposed political intriguing they have been several times expelled from France, Spain, Russia, Holland, and other countries, but the order still survives in most countries, its being estimated that it has still over 10,000 devoted members.

Jet, a deep black fossil substance admitting of a high polish and much used for jewellery, ornaments, and trimming. The substance belongs to the Tertiary and Secondary rocks, the most important deposit being found near Whitby, where jet manufacture has been an established industry for a long period. In recent years, however, an imported imitation jet has somewhat interfered with the English jet trade.

Jetsam, a term in navigation law, signifying cargo thrown into the sea and sunk. Such goods belong to the Crown in default of other claimants. (See *Flotsam*.)

Jetton, a kind of metal counter formerly used in card-playing. Monarchs, nobles, and abbots had their distinctive jettons, which were often as carefully devised and inscribed as if they had been pieces of gold. Examples survive in many museums.

Jetty, a construction of wood, masonry, or ironwork, projecting into the sea, and serving as a wharf for shipping and merchandise, or as a mole for harbour protection.

Jeunesse dorée, gilded youth, a term applied to young men "about town" remarkable for their luxurious habits. The name was originally given to a fashionable political party of the French Revolution.

Jewish fish, a large fish of the Serranidae family, plentiful round the coast of America.

Jewish Calendar is supposed to date from the Creation which is reckoned to have been anterior to the Christian era by 3 760 years and 3 months. The Jewish year 5670 began on September 10th, 1909.

Jews, descendants of the ancient Hebrews or Israelites, exist to the number of considerably more than twelve millions in all parts of the world. There are about 750,000 in London alone, and in other parts of the United Kingdom upwards of 100,000 more. In Europe there are nearly 6,000,000, more than half the number living within the boundaries of the Russian Empire, despite recent persecutions and migrations. Austria-Hungary contains over 2,000,000; Germany has over half a million; Turkey, 1,050,000; Roumania, 215,000; Holland, 103,000; France, 101,000; Italy 44,000; Switzerland, 12,000. In the *Jewish Year Book* it is estimated that in North and South America there are some two million and a half Jews; in Asia, 450,745; in Africa, 354,500; and in Australia, 17,000. A movement is on foot for restoring poor Jews to Palestine, where to-day some 80,000 are living on the soil. The Zionist movement, which has for its object the founding of Jewish colonies in favourable countries, has also been warmly taken up. In this country the Jews have been practically freed from all disabilities, but in many lands they continue to be oppressed.

Jew's Ear, a fungus that grows in the shape of an ear and is common in England. At one time it was accounted of medicinal value, and in China is esteemed both as a medicine and as an article of diet.

Jew's Harp, a small musical instrument, the sound from which are produced by the vibrations of a metal tongue which extends through its centre. The harp is pressed against the teeth of the performer, who twangs the metallic tongue with his finger, simultaneously breathing the required vibrations of tone upon it. Handled by an expert player, it is capable of producing very pleasing music.

Jewstone, a pale grey egg-shaped fossil stone that was once highly prized.

Jhoom, the name of a method of cultivation adopted in the jungle parts of India, but only followed for a year or two after the forest growth has been cleared by burning.

Jib, the front triangular sail of a ship, resting on a stay, and in large vessels projecting from the end of the jib-boom. There is also a flying jib outside this.

Jig, a rapid dance for one or more persons, much indulged in in Ireland and the English and Scotch provinces, a survival of old English days.

Jigger, a kind of flea or mite common in the West Indies and some of the warmer parts of the United States. It pierces the skin like a mosquito and causes great irritation.

Jihad, a holy war, proclaimed by the Mussulmans against Christians. Fanatics attempted to set one on foot in India in 1877, and simultaneously another was proclaimed at Constantinople against the Russians, but it came to naught.

Jingal, the name of a swivel-musket largely used by the Chinese for shooting water fowl and other birds.

Jingos, an English political term which came into vogue in the "seventies" and "eighties," when Russia seemed to be threatening an advance on Constantinople. A music-hall song of the day, sung by Macdormott, the refrain of which was "We don't want to fight, but by *Jingo* if we do," etc., emphasised the feeling of the party and gave the cue for their being called "Jingos."

Jinn are supposed to be spirits of evil, assuming various shapes, human and animal, and exercising good or evil influence, according to their origin or mission. In the *Arabian Nights* and other Eastern literature jinns or genii are numerous.

Jinrikisha, a hooded, two-wheeled vehicle drawn by one or two men, and used in Japan, India, and other Eastern countries.

Joachimites were adherents of the Italian religionist, Joachim, who was abbot of Floris at the beginning of the 13th century, and maintained that three reigns would complete the history of the earth; the first was the reign of the Father, from the Creation to the birth of Christ; the second that of the Son, from the birth of Christ to 1260; and the third that of the Holy Spirit, from 1260 to the end of the world.

Joannites were followers of St. John Chrysostom, Archbishop of Constantinople, in the 4th and 5th centuries, and were noted for their austerity.

Jeckey Club, the governing body that, although possessing no legal status, frames rules and laws by which horse-racing and turf matters generally are regulated. The club-house is at Newmarket.

Johannes, a Portuguese gold coin of the 17th and 18th centuries, worth nearly 2s English.

Johannisberger, a famous white wine produced from grapes grown in the Rheingau district near Wiesbaden.

Johannite, a green mineral, scientifically described as "a hydrous sulphate of the protoxide of uranium."

John Bull, the typical figure of an Englishman, bluff, big, and burly. Arbuthnot's *History of John Bull* is supposed to have originated the character.

John Company, a familiar appellation of the East India Company, in the days before the Mutiny.

John Dory, a well-known sea-fish of which there are six species. It is of a golden yellow colour (*jaune doré*), has a high dorsal fin with long filaments projecting from the spines, and is much valued as a table fish. It is sometimes found in British waters, but the Mediterranean is its chief habitat.

John O'Groats's House, inhabited by a farmer of that name and his brothers in the 15th century, stood on Duncairn Head, the northernmost point of Scotland. The site is marked and an inn was erected near it in 1876.

Joiner, a workman whose occupation is to construct articles in house-building by joining woodwork with framings, glue, screws, nails, etc.; a specific branch of the craft of carpentry.

Joist, a horizontal timber employed in the support of floors and ceilings in house-building; latterly iron joists have also been called into requisition in the construction of many important edifices.

Jongleurs were originally minstrels and jesters who wandered from town to town singing songs and giving entertainments. In Norman days they were popular both in France and England and were

favoured by the kings. In latter times they degenerated into conjurers, and so gave rise to the term jugglers.

Jordanite, the name given to a native sulphide of arsenic and lead found in orthorhombic crystals in the dolomite of the Binnenthal, in Switzerland.

Joss, the popular name of a Chinese idol, the place where it is kept being called a joss-house.

Joug, an ancient Scottish instrument of punishment, in the form of an iron collar, which was fitted to the neck and held to the wall or to a tree by a chain; a variety of pillory of a barbarous character, employed in the repression of female recalcitrants at times.

Joule, the electrical unit adopted by Siemens and representing the work accomplished in one second, "in maintaining a current of one ampere against a resistance of one ohm." The name commemorates that of Prof. J. P. Joule, the eminent scientist.

Jousts were military tilings in which the contestants strove against each other on horseback with blunted lances, and were in the nature of tournaments. Jousts were the sport of nobles in feudal times.

Jove, a classical name for Jupiter, the chief of the Roman divinities.

Jovinianite, a sect founded in the 4th century by a Milanese monk named Jovinian, who contended for the equality of sins, rewards, and punishments, and denounced celibacy and other prevalent features of Church doctrine.

Jowler, a Cornish and West of England term for a fish-hawker who plies his trade on horseback.

Jube, in church architecture, the roof-loft over the entrance to the choir from the chancel.

Jubilee, fiftieth-year celebrations, first introduced by the Roman Catholic Church, when special indulgences were granted and there was much rejoicing. In recent times the word Jubilee has been applied to any kind of fiftieth-year celebration; the most prominent of these in England having been the two Jubilees of Queen Victoria—that of the fiftieth year of her reign in 1887, and her Diamond Jubilee in 1897.

Judge Advocate General, a Crown Minister, entrusted with the duty of advising on subjects connected with military law, and attached to the Privy Council. It is necessary he should be a member of the House of Commons.

Julian Calendar, named after Julius Caesar, who was the first to adopt the calculation of time by the solar year, the average length being fixed at 365 days. There was still an overplus of a few minutes every year, however, and this was rectified by the Gregorian Calendar, introduced in Italy in 1582 and adopted in England in 1752, from which date what is called the "New Style" begins.

Julianists, a sect of Gnosts who believed the body of Christ to be incorruptible, in contravention of the doctrine of the Severians.

Julio, an old Italian coin worth about 6d. English.

July, the seventh month of the year, named after Julius Caesar. It was the *Maed month* (moed-month) of the Saxons.

July Revolution, the French revolution of 1830 whereby Charles X was deposed and Louis Philippe made Citizen King, the latter being himself deprived of Kingship by the revolution of 1848.

Jumart, a fabulous monster which often cropped up in early English literature, supposed to be the offspring of a bull and a mare, or of a horse and a cow.

Jumpers, religious sects or bodies who make jumping or dancing a part of their ceremony of worship. Certain Methodists of Wales, some Irvingites, the Shakers of America, and a Russian sect have adopted the practice more or less.

Junco, the name given to a genus of snowbirds, confined to the American continent.

June, the sixth month of the year, containing 30 days and deriving its name from Juno. It was the *Sear* (Dry) month of the Saxons.

Juniper, the Indian name for a forest or dense tract of juniper.

Jungle-fowl, a gallinaceous bird of the pheasant family, having four varieties. It abounds in the forest regions of India, Ceylon, and Java; and there

is an Australian bird of the megapod order to which the term Jungle Fowl is applied. They are all birds of brilliant plumage.

Juniper, the Nova Scotian name of the American larch; also all the trees of the *Juniperus* genus from the unripe fruit of some species of which is distilled the stimulant and diuretic oil of juniper.

"Junius," the signature under which a remarkably able and vigorous series of political letters were published in 1769 in the *Public Advertiser*, and now generally attributed to Sir Philip Francis, though the evidence is by no means conclusive.

Junk, a flat-bottomed Chinese sea-going boat, carrying large masts, and employed on the coasts and seas of China and Japan.

Junkers, a German political party name, referring to a class of young nobles of military spirit, who, prior to the Franco-Prussian War, supported Bismarck.

Junket, a sort of sweetmeat, consisting sometimes (as in Devonshire) of curds and cream, sweetened and flavoured with will.

Junta, a Spanish word designating a legislative or other distinguished assembly entrusted with the passing of laws or the deciding of policy. A grand council of state.

Jupiter, the largest body of the planetary system except the sun, from which orb it is distant 48,000,000 miles. Its mass is over 300 times as heavy as the earth, while in bulk it is 1,300 times as large. It has five satellites. Also the supreme deity of the Romans, identified with the Greek Zeus.

Jurassic Formation, a series of rocks (the evidences of which are most marked in the Jura Mountains) coming between the Cretaceous and Triassic groups and including the Oolite and the Lias. It is a formation rich in fauna, and extends through a great part of Europe and to America.

Jury, a body of men chosen and sworn to hear and pass verdict upon evidence brought forward at a trial, inquest or inquiry. Its origin is obscure, but it was in existence in the 13th century. There are three classes of juries; the Grand Jury of 23 freeholders summoned for criminal courts; upon whom devolves the duty of deciding whether there is a *prima facie* case against a person accused; Common Jury, consisting of 12 members, who have to pronounce their verdict upon the evidence; and the Special Jury, which simply a jury of men of higher social standing or specific experience. There are also certain other juries called together for particular purposes, such as the *Coroner's Jury*, the *Jury of Matrons*, and so on.

Jurymast, a word of doubtful origin, the application of the term "jury" being difficult in this connection to define, but indicating an improvised mast put up in place of one lost or broken down.

Justices, is defined as "a written or prescribed law, to which one is bound to conform and make it the rule of one's decisions."

Jute, the name given to the fibre of a plant largely grown in India and used for the manufacture of coarse cloths, cordage, etc. Dundee is the chief centre of this industry.

Jutes, a Low German race who in the 5th century invaded the South-eastern part of England, establishing themselves in Kent and making Canterbury their capital.

Juvenalia, games of young people instituted in Rome's imperial days by Nero.

Jussak, a heavy description of rifle used by the Afghans.

K

Kaaba, the inner shrine of the Great Mosque at Mecca, only thrown open to the faithful three times a year. It contains in its south-eastern corner the famous sacred "black stone," said to have fallen from heaven with Adam.

Kaffirs, a native race of South Africans, which includes the Zulus and other of the more powerful tribes. They were originally called Kaffirs (meaning "infidels") because of their refusal to adopt the Mahomedan religion.

Kaganalkia, a genus of the Roseworts, confined naturally to Chili; a tall growing ornamental tree, white flowered, and propagated successfully under glass in this country.

Kago, a rude Japanese palanquin suspended from a pole borne on the shoulders of two carriers, the person carried resting in a sort of bamboo hammock.

Kagu, a grey crested bird, the only member of the *Rhinocetina* family, and an inhabitant of New Caledonia. In its general characteristics it has some resemblance to the heron, though it is, properly speaking, a crane.

Kaha, the Dyak name for the Proboscis monkey of Borneo (*Semnopithecus nasalis*).

"Kalligard School," a term—meaning "cabbage garden"—applied to a recent school of novelists who have in the main taken homely Scottish rural life for the subjects of their stories.

Kain, a tribute or duty, formerly taken—in kind, as poultry, etc.—by landlords in Scotland and elsewhere as part of the rents due to them from their tenants.

Kainite, a mineral found in the Stassfurt salt mines, Magdeburg, Prussia, forming a source of potassium compounds, and consisting of magnesium sulphate and potassium chloride.

Kaiser, the German form of the word *Cæsar*, emperor, borne at the present time by the sovereigns of Germany and Austria. Charlemagne was the first prince to assume the title of Kaiser.

Kakapo, the New Zealand owl-parrot, a peculiar and interesting species, possessing wings but not able to use them for flight, of brown mottled plumage, nocturnal in its habits, and nesting in burrows. The bird is rapidly becoming extinct.

Kalan, a local name for the sea-otter which is only found in the seas of Kamchatka and North-West America. It is larger than the beaver, and weighs from 70 to 80 lbs. Its proper zoological name is *Enhydra lutris*.

Kalanchoe, the genus of Crassulaceæ, the leaves of varieties of which are applied to medicinal uses in China, India, and South America.

Kale, strictly a kind of cabbage with curly leaves; but also applied to cabbages in general; also the name of a broth made from kale and other ingredients.

Kalidoscope, an optical instrument, the invention of Sir David Brewster, and consisting of a cylindrical tube containing two mirrors inclined to each other at an angle, which produce a symmetrical reflection of any transparent coloured substances placed between. An endless variety of beautiful patterns is obtained by turning the toy round.

Kalends. (See *Calends*.)

Kalmucks, a branch of the Tartar or Mongol race who, in the 17th century, were expelled from Tibet and China and settled on the banks of the Volga, but many of whom returned to China in 1911. Since then they have wandered over many lands. They are skilled in metal working and their religion is a modified Buddhism.

Kalpis, an ancient three-handled Grecian water vase of large size, decorated with classical figures in red on a dark ground.

Kalsomine, a mixture of Paris white, clear glue, and water, forming a serviceable whitewash.

Kami, a Japanese title applied to gods and celestials and their descendants, the emperor and members of the imperial family, and daimios and governors.

Kamila, a dye substance, giving a deep orange colour, obtained from the pods of the *Millettia Philippensis*, a tropical and sub-tropical tree.

Kamptuloon, a floor covering composed of a mixture of indiarubber gutta-percha, and cork. It was invented by Elijah Galloway in 1843, and though at first only made in grey shades, is now produced in a variety of bright coloured patterns.

Kangaroo, a large marsupial or pouch-bearing animal confined entirely to Australasia. Captain Cook was the first European to observe the animal in 1770. There are 55 species. A male kangaroo stands from 6 to 7 feet high; the female, which carries her young in her abdominal pouch, is considerably less. These animals can move at an

exceedingly rapid pace, progressing by tremendous leaps of from 10 to 20 feet.

Kantianism, the philosophical principles propounded by Immanuel Kant, the German metaphysician, which sought to restrict human knowledge to objects of possible experience, while admitting religious ideas as modifying influences.

Kao-lin, a fine clay much used in the manufacture of Oriental, Sèvres, and other high-class pottery. It results from the decomposition of felspar, and is found in China, Japan, Devon, Cornwall, at Limoges, and in certain parts of the United States.

Karaites, a Jewish sect founded in the 8th century by Ananias David, who adhered strictly to the Scriptural word and rejected the Rabbinical traditions and the Talmud. Remnants of the sect still exist in parts of Eastern Europe.

Karma, the Buddhist theory that a man's actions control his destiny after death, as the natural effect of a natural cause. The idea of successive existences is bound up with the doctrine, and forms an interesting subject of ethical speculation.

Katydid, a large green-winged insect of arboreal habits, common in the central and eastern portions of the United States, and noted for its shrill note, which sounds like its name, and is produced by stridulation.

Kauri Pine, the tree which yields Kauri gum so largely used in varnish making, and exclusive to New Zealand. It exists in a fossil found in the sites of ancient Kauri woods.

Keble College, an Oxford college founded and endowed in 1870 in memory of the Rev. John Keble, author of *The Christian Year*.

Keep, the central tower or chief stronghold of an ancient castle, sometimes called the donjon.

"Keepsake," Khe, a form of gift-book issued annually in the early part of the last century; much patronised by society for the sake of its contributions by titled and other personages, and for its pictures, but of small literary or artistic value.

Kelp, the ash of burned seaweed, which yields carbonate of soda and sulphates and chlorides of soda, as well as small proportions of iodine and bromine in conjunction with sodium and magnesium. Formerly used in the manufacture of soap and glass extensively, but superseded largely for such purposes by barilla and other substances.

Kelpie, a water-sprite of Scottish fairy-lore, whose appearance assumed various forms, and was supposed to forebode drowning to the person who saw it.

Kentish Fire, a noisy long-continued kind of cheering and clapping of hands which originated in Kent at the Protestant meetings held in 1828-9 to oppose the Roman Catholic Relief Bill.

Kentish Rag, a kind of fossiliferous clayey limestone of the Upper Neocomian formation found in Kent. Used largely in building, for rubble and other walls, generally dressed roughly, if at all.

Kermes, a crimson dyestuff, less brilliant than cochineal, but more lasting. It is made from the bodies of the females of a small oak-inhabiting insect (*Coccus*) found in immense numbers on the coasts of the Mediterranean. It was discovered before cochineal.

Kermesite, a somewhat scarce mineral, being a combination of oxide and sulphide of antimony, and of a red colour. Often called red antimony.

Kern-haby, an image dressed up with corn, and formerly carried before the reapers in the processions attendant upon the rustic festivities of "Harvest home."

Kerosene, an illuminating oil distilled from petroleum and shale, and practically the same as paraffin.

Kersanite, a micaceous description of dolomite found at Visembach in the Vosges, consisting mainly of oligoclase.

Kersey, a coarse kind of woollen cloth, originally made at Kersey, in Suffolk, and much used in the middle ages, for ordinary men's clothing.

Kerseymere, a fine twilled all-wool cloth greatly in vogue in the last century as a dress fabric. The word is a corruption of Cashmere.

Kestrel, a rather small kind of falcon of vari-coloured plumage, common in most parts of Europe, and also found in Africa and Asia. It feeds on mice, small birds, beetles, etc. The Common Kestrel is the most familiar of British hawks.

Ketch, a sailing vessel formerly in considerable vogue, with two tall masts fore and aft, and clear amidships.

Kew Gardens are amongst the most celebrated botanical gardens in the world. They were established in 1760 by order of George III., and it was here that the valuable collections of Captain Cook and Sir Joseph Banks were accommodated. Since 1840 the gardens have been open to the public, and form one of the most attractive resorts near London. The Kew Observatory stands at the south end of the gardens.

Kex, the old English name for hemlock; so-called because of the hollow stems of the plant.

Key, a musical term indicating the central dominating note that gives the melodic order in which the tones of a tune or composition are arranged. It is the starting point, and different starting points demand different scales. The Natural Key of C, for instance, requires no flats or sharps; all other keys require the use of sharps or flats to bring the notes of their scales into proper relation.

Keys, House of, is the Manx representative assembly—the local House of Commons—and consists of 24 members, elected by popular vote since 1866. Prior to that date the members elected each other. The Governor presides at their deliberations.

Keyser's Pill, a medicine of which the active principle is acetate of mercury.

Keystone, the stone which occupies the centre and highest point of an arch and is usually the last to be inserted.

Khal tree, a small prickly tree of the Acacia family, bearing white flower, on long axillary spikes, and common in Western India.

Khaki, a clay-coloured cloth largely adopted for uniforms in the British Army in the time of the war with the Boers. First used by Indian regiments.

Khan, a title formerly of importance in Eastern countries, and given to princes and governors of states, but now of too common use to be much more than a mere courtesy designation. Also the name of a caravan-serai.

Khedive, the title borne by the Viceroys of Egypt since 1879, after Ismail. Pasha's arrangements with the Sultan establishing hereditary succession in his family.

Khelat, a dress or robe conferred as a mark of distinction by the Hindoos and Arabs.

Khonds, a race of aboriginal East Indians occupying the jungles and lower regions of Orissa, and formerly noted for their frequent human sacrifices, which, however, have been prohibited since 1826.

Khyber, a light Khyber passenger vehicle, mounted on two wheels in summer, but used sledge-wise on long runners in snowy weather.

Kilderkin, once a common liquid measure in England, representing 18 gallons.

Kilt, a short plumed plaid skirt-like garment forming part of the Highland costume, and reaching from the waist to the knees. In olden times it was simply the lower part of the belted plaid.

Kilting, a dress-making term denoting an arrangement of flat single pleats, placed side by side.

Kimmeridge Shale, the name given to a peculiar geological formation most prominent at Kimmeridge in Dorsetshire, abounding in saurian fossils, and forming the base of the Portland oolite group. Much of the shale is bituminous and is burned as fuel, though very impure.

Kindergarten, a system of children's schools ("garden of children"), introduced by Friedrich Froebel about the middle of the last century, and intended to inculcate instruction by means of toys, games, and singing—things in which children take delight naturally. The system is now well established in nearly all countries, having been developed on very successful lines in connection with the primary schools of England.

Kindred Table was compiled in 1863, and is printed in the *Book of Common Prayer* of the Established Church.

Kinematics, the science of pure motion, admitting conceptions of velocity and time, but not of force. All the properties of a curve may be deduced from the kinematics of a point.

Kinematograph, an adaptation of the magic lantern, consisting of a rapid succession of photographs of a moving scene, which when thrown on to a screen exhibit a picture with all the figures in actual motion. The photographs are attached to a ribbon and as this unrolls panorama-like the scene is depicted in detailed movement. A later development of the idea is the kinemacolor, which shows natural colours. Edison

was the first inventor of this kinematograph principle.

King Crab, a remarkable crustacean inhabiting the sea coasts of America and the Moluccas, carrying a shield-shaped shell, and having a long pointed spine projecting from its posterior. The body comprises three separate sections articulated together. These crabs—in America known commonly as the horseshoe crab because of their shape—are from 18 inches to 2 feet in length.

Kingfisher, a well-known and widely distributed family of brilliant-plumaged birds, comprising 20 genera and some 120 species. The larger species are fish eaters, the smaller insect eaters. The British kingfisher, *Alcedo cyanea*, haunts the rivers and streams, and is one of the most beautiful of native birds. All kingfishers have long bills. In the Malay archipelago, New Guinea, the Moluccas, and Australia the varieties are very numerous, but Europe and North America have each only two species. The quaint *Laughing Jackass* of Australia is the largest of the kingfisher family.

King-of-Arms, the names of the chief officials of the Herald's College. There are several in England—the principal being those of the Garter, Norroy, and Clarenceux. (See *Herald's College*.)

King Solomon's Mines.—Mr. K. N. Hall, F.R.G.S., as the result of several years' excavations at Zimbabwe, in Rhodesia, came to the conclusion that here were the mines whence Solomon obtained gold for the Temple. The ancient monument of Rhodesia contain the oldest and most extensive gold mines known to the world, and from these, it is believed, gold to the value of some £75,000,000 sterling was extracted during the time covering the Ughur period of the Scriptures. The older portions of Zimbabwe ruins, it is assumed, represent the monuments of a colony of the ancient empire of Sheba in South Arabia. The discoveries of Zimbabwe are in two divisions, one a temple in the valley, and the other a fortress on the hill. The masonry throughout is of granite without mortar or cement, though cement was known to the builders, for there are large platforms and floors made of that material. The date has been fixed at about 1,200 B.C.

King's Speech is the speech prepared by the Premier or other responsible Ministers in consultation with the King, and delivered by his Majesty in person, or by the Lord Chancellor in his absence, at the opening or closing of a Parliamentary session. The first King's speech was delivered by Henry I. in 1107.

Kinkajou, a carnivorous animal of the raccoon family, having a brown fur. It is common in the forests of Central and South America, lives mostly in the trees, feeding on birds, fruit, insects, etc.

Kino, a gum extracted from several tropical trees, and of considerable value as a drug because of its astringent properties. It contains a large proportion of tannic acid. It is used for dyeing purposes in India, yielding the colour called nankeen.

Kiosk, a small open pavilion of light construction much used in Eastern countries as places of shade and rest. Similar structures are common in the streets of Paris as news and advertisement stands, and in London as telephone offices.

Kirkman, one of the two Japanese imperial crests, comprising the design of the flowers, leaves and stems of three pawlownia plants. The *Aikamon* is the other imperial crest.

Kirk, the Church of Scotland. Kirk-Session is a "court" of the Presbyterian churches, consisting of the ministers and elders.

Kirk's Lamb, a regiment commanded by Captain Kirk, and of ill repute for their cruelties in hunting down persons suspected of sympathy with Macdonald in the rebellion of 1685. The paschal lamb was the emblem borne on their flag.

Kirschwasser, a spirituous beverage distilled from the wild cherry, made chiefly in the Voges and Black Forest.

Kirtle, the name given in the 16th and 17th centuries to a woman's garment, but not always to the same kind of garment. At one time it was an undergarment or petticoat, at another a gown or a cloak, and sometimes referred to men's garments. More generally a kirtle was a woman's outer skirt.

Kirwanite, a hydrated silicate of alumina, protoxide of iron and lime, occurring in the basalt of County Antrim.

Kish, the impurities which float to the surface of molten lead in smelting.

Kismet, a word signifying fate, destiny, or doom, frequently employed (or its equivalent) in most Oriental countries, and also in considerable use in European literature and speech.

Kit-Cat Club, a famous club formed in the early part of the 18th century, and having among its members many notable people, including Addison and Steele. It derived its name from the pastry cook who served it with pies—Christopher Cat—and has had its existence commemorated in a special size of portrait called a "Kit-Cat," because of the fact that the portraits of the members of the club were all done (by Sir Godfrey Kneller) to this size—36 inches long, by 24 inches wide. Its summer meetings were held in the Upper Flask Inn, Hampstead.

Kitchen, an apartment mainly appropriated to culinary uses.

Kitchen Middens, the name designating certain geological evidences, consisting of large mounds, presumably the sites of prehistoric villages, distinctive features of which are stone-hearths. These mounds contain large quantities of fossil remains of edible molluscs, bones of birds, animals, and fishes, fragments of implements, etc. They exist in the largest numbers on the east coast of Britain, and here and there on the coasts of Scotland, Ireland, and England, and belong, it is supposed, to the early Neolithic Age.

Kite, a bird of prey once very common but now scarce in Britain. It is one of the *Falconidae* family, of a dark brown colour, and feeds on rabbits, frogs, moles, and fish. In Eastern countries where kites are numerous they are valuable scavengers. There are several known species in America.

Kittiwake, a beautiful white and pearl-blue gull inhabiting the rocky coasts of the North Atlantic. It has a yellow bill with a downward curved point.

"Kladderadatsch." the title of the leading German humorous journal—often called the German *Punch*—founded by Albert Hoffmann.

Kleptomania, a species of moral insanity, manifesting itself in an irresistible impulse to theft.

Klipspringer, a small South African antelope standing little more than two feet high. It has long bristly hair, and short slight horns. Its habitat is the rocky regions of the Cape.

Klappanite, a hydrated silicate of manganese and iron, compact and dull, dark-hued, and akin to rhodonite in an impure state.

Knapsack, a bag containing necessary articles which a soldier carries strapped to his shoulder. Formerly its contents consisted of food, but in recent times it has been utilized mainly as the receptacle of articles of clothing. Tourists' knapsacks are a convenient adaptation of the idea.

Knighthood is a degree of honour or title common in Europe since the Middle Ages, and was at first exclusively a military order. In Great Britain the four main orders of knighthood are those of the Garter, the Bath, the Thistle, and St. Patrick; in addition to which there are several other orders such as the Order of St. Michael and St. George, the

Star of India, etc. There are also Knights Bachelors, such as are not associated with any special order. The title is not hereditary, and therefore ranks below that of a baronet, though both are entitled to the prefix "Sir."

Knobstick, a term of opprobrium much in use among the working-classes in England in the middle part of the last century, and applied to workmen who dissociate themselves from the majority, and either accept work while others are on strike, or otherwise decline to abide by the rules of trades unions or associations.

Knot, a nautical mile equal to about $\frac{1}{2}$ of a statute mile, and measured by a log-line, which is divided by knots at equal distances— $\frac{1}{12}$ of a geographical mile. The number of knots travelled by the ship in half a minute correspond to the number of nautical miles it travels per hour.

Knout, a Russian instrument of punishment, consisting of a whip of many thongs, used upon Russian criminals since the 15th century, and so severe in its effect that a large number of its victims died from its infliction. A hundred and twenty strokes were considered equivalent to a sentence of death; half that number sufficing to kill in many instances. Czar Nicholas I. however, changed the form of the knout, which is now a much milder instrument.

"Know-nothing," a member of a secret political society in the United States of America, organised for the purpose of obtaining a repeal of the Nationalisation Law; it lasted for two or three years only from 1853 onward.

Knurr and Spell. See Pears' Dictionary of Sports and Pastimes.

Knuckle-duster, a formidable apparatus contrived for the purpose of protecting the knuckles and to add force to their use; frequently employed by gaudier and other lawless ruffians.

Koala, an Australian arboreal marsupial mammal, with ashy-grey fur, bushy ears, and rudimentary tail. It feeds on leaves and roots, and is not more than 2 ft. in length.

Koh-i-Noor (see Diamonds).

Kohl-rabi, the turnip-rooted cabbage, the edible protuberance upon the stem of which, just above the ground line, is its most esteemed part.

Kohel, a powder, scraped from antimony or burnt almond shells, and in common use by the women of the East for darkening the eyelids.

Kongsbergite, an amalgam of mercury and silver, occurring in crystals in the mines of Kongsberg, in Norway.

Koodoo, a beautiful African antelope, the males being noted for spiral horns which when full grown are 4 ft. long. The animal is about 5 ft. high at the shoulder, and its grey-brown coat is ornamented with white stripes. It affords good sport to the hunter, being one of the fleetest animals on the African continent.

Kopah, a Polynesian aroid, cultivated by the natives of the South Sea Islands for its large edible yam-like roots.

Koran, the Bible of the Mahomedans, written by Mahomed in the 7th century, and supposed to be a transcript of a series of messages delivered to the prophet by the Angel Gabriel during a period of 23 years. It constitutes the law of life, civil, military, religious, and legal, to Mahomedans. It recognises Christ and Moses as prophets of God, but gives the chief place to Mahomed. It was not until 1734 that an English translation of the Koran appeared, by George Sale.

Korashid, an ancient Arab tribe whose members kept guard over the sacred stone of Mecca before the rise of Mahomed. When he appeared on the scene they opposed his claim, but were ultimately defeated by him and his followers.

Kos, a Jewish measure of capacity, equivalent to about four cubic inches.

Koto, a musical instrument in general use in Japan, consisting of a series of 13 silken strings stretched across a curved wooden surface, and played with the fingers. Each string is 5 feet long, and has a separate bridge so fixed as to give the vibration necessary for

the note it has to produce. It is a sort of horizontal harp, and in the hands of an expert player is capable of giving forth excellent music.

Koutama, a beverage made from mare's milk fermented, and often served up with cooked grain; a common refreshment of the Arabs of Africa and some of the tribes of Asia, particularly the Tartars.

Kraal, a hut or collection of huts in an African village.

Kraken, a fabled Scandinavian sea monster, around which many legends and superstitions have been formed in Norway. It is generally described as a sort of sea-serpent, and was so large and weird of form as to be mistaken, so the tradition runs, by fishermen for an island.

Kremlin, a large fortified citadel in Moscow, containing the cathedral in which the Czars are crowned, an imperial palace, and important garrisons and arsenals. At the foot of the Ivan Tower rests, in a cracked condition, the famous great Ivan bell, weighing 200 tons.

Kreutzer, an ancient German, and a modern Austrian, coin, the hundredth part of a florin or something like the equivalent of our farthing. It derives its name from the cross stamped upon it.

Krishna, one of the Hindu deities, and a chief character in the Mahabharata epic.

Krone, a Scandinavian and Austrian silver coin (Krona in Sweden), the Scandinavian coin being of the value in English of 15. 1/4d, the Austrian about 10d. There are also gold coins of 10 and 20 kroner.

Krypton, an atmospheric gas belonging to the helium group and of a greater density than nitrogen. It was discovered by Prof. Ramsay in 1898, and exists only in very minute quantities.

Kusang, a peculiar tailless Javanese lemur, remarkable for its habitual inactivity, ungainly structure, and slow motion; better known as the Slow-paced lor.

Ku-Klux-Klan, the title of a secret American association whose members were sworn to continue active sympathy with the secession principle after the conclusion of the Civil War in 1865. The organisation was wholly confined to the Southern States, but gave rise to many cruel outrages on Southerners and others who had been supporters of the North.

Kullin, a Brahmin of high sacerdotal position, to whom the privilege of plurality of wives is permitted, with whom he gets liberal dowries, while each wife is maintained in the parental home.

Kummel, a Russian cordial, flavoured with cummin, caraway seeds, or fennel.

Kunkir-seed, the gum of the artichoke root, used by the Arabs as an emetic.

Kunzite is a recently discovered gem which is peach-pink in colour, highly dieloric in quality, and possessing wonderful fluorescence. Upon exposure to the action of the X-rays or radium bromide, the gem-stone becomes phosphorescent, and remains so for some appreciable time after removal. After exposure to the X-rays it will, if placed in the dark, photograph itself upon a piece of sensitive paper. In respect to this phenomenon of fluorescence, Kunzite is unique among gem-stones. It was discovered by Professor George F. Kunz, President of the New York Mineralogical Club, and has been given the name of its sponsor. So far it is found only in San Diego, California.

Kurds, a native race inhabiting Kurdistan, a wandering, predatory people professing the Mahomedan faith and speaking an Iranic dialect.

Kussler, a Turkish musical instrument consisting of five strings stretched over a sort of kettledrum.

Kusti, a woollen band of 72 threads—the number of the chapters of the Izashue—and two branches, each branch containing six knots, together standing for the 12 months of the year.

Kutch, the packet of vellum leaves in which gold is placed for the first beating; the gold-beaters' skin packet into which the leaf is placed for the second beating is known as the "shoder."

Kutia, a special Russian dish eaten after a funeral ceremony at a church or cemetery, and composed of boiled rice or other cereal mixed with honey and raisins, the ingredients being supposed to possess some symbolical significance.

Kuttar, a form of Indian dagger with a handle of parallel bars and cross-piece.

Kuwawaku, the title given to the Japanese court nobles, *kuge* and *daijins*.

Kwas, a common Russian fermented beverage made from an infusion of flour or meal or dough of rye, wheat or malt. A superior kind is made from fruits.

Kylix, the name given in ancient Greece to a graceful double-handled drinking cup, in general shape something like a modern champagne glass.

Kymograph, an instrument for measuring fluids, especially the blood in living beings, and consisting of a revolving cylinder containing a smoked paper on which the pressure is recorded.

Kyrie Eleison, "Lord have mercy," the name of a common form of prayer in the Roman Catholic and Greek Churches; also applied to the English church responses after the recital of the commandments.

Kyriolaxy, a term indicating the use of literal as contradistinguished from figurative expressions.

Kyrie Society, named after Pope's "Man of Ross," John Kyrie, founded by Miss Miranda and Miss Octavia Hill in 1875, and having for its object the decoration of workmen's clubs, hospitals, etc., and the promotion among the poor of a taste for literature, music, and out-door recreation.

Kyrosite, an impure form of marcasite, known to the Germans since 1725 as white copper ore.

Kyate, a chest or coffin for the burial of the dead.

L

Labadists were a sect of Christian communists instituted by Jean de Labadie in France in the 17th century. They did not distinguish Sunday from other days, holding that life is all Sabbath.

Labarum, the standard of Constantine the Great, adopted after his conversion to Christianity, marked with his seal, and represented upon the coinage.

Laboratory, a department or room, fitted with apparatus for prosecuting scientific investigations.

Labour Exchanges, established in 1900, collect and supply information as to employers wanting workpeople, and workpeople requiring employment. The country is divided into ten divisions, each with a divisional clearing-house and chief, and all co-ordinated with a central clearing-house in London. The number of exchanges open in Dec. 1912 was 414, at which time a daily average of over 3,000 vacancies were being filled through this agency.

Labourers' Statute of, was passed in 1350, and again in 1357, with the object of compelling labourers to accept a certain rate of wages and not leave their employers' service, the Plague having rendered labourers so scarce that they were in great demand and had been insisting on higher pay. These enactments were bitterly opposed and led to the "Peasants' Revolt," headed by Wat Tyler.

Labour Party, has a total membership of nearly 200,000. Affiliated with the party are 135 Trade Unions; 83 Trades Councils; 66 Local Labour parties; 26,000 of the Independent Labour party; and 2,327 members of the Fabian Society. In 1914 there were 39 members of the Labour party in Parliament, with J. Ramsay MacDonald as chairman. In the 1900 Parliament the party had only 6 members.

Labradorite, a mineral of a pearly lustre on cleavage, found in masses in igneous rocks, the best samples of which come from Labrador.

Labrax, a genus of fish, embracing the ancient Greek labrax and the ancient Roman lupus, and typically represented to-day by the common bass.

Labyrinth, or **maze**, a combination of roads and passages so constructed as to render it difficult for anyone ignorant of the clue to trace the way to the central part. The Egyptian labyrinth on Lake Meris had 3,000 rooms, half of them subterranean, and the remainder above ground. The Cretan labyrinth of the mythology was said to have been constructed by Daedalus. There was one at Lemnos, renowned for its stelaetic columns; and another at Clusium constructed by Porsenna, King of Etruria, about 520 B.C. The labyrinth in which Fair Rosamond was concealed was at Woodstock. Hampton Court maze dates from the 16th century.

Labyrinthodon, a gigantic fossil amphibian, which gets its name from the curious labyrinthine structure of its teeth. It occurs in the Red Sandstone formation, and remains have been found in Britain and other parts of Europe. Its head was several feet long, and its footprints by which it was discovered, closely resemble the prints of the human hand.

Lac, a resinous matter deposited on the branches of a number of tropical trees by the females of the lac-insect, the exudation including eggs and a viscous covering. At the gathering time the twigs are broken off and dried in the sun, when the insects die, and the lac that remains is termed *suck-lac*. From this, by the removal of extraneous accretions and dissolving, *seed-lac* is produced. *Shell-lac* is seed-lac after it has been melted and otherwise prepared, and this is the best known of the lacs, being used in the manufacture of varnishes, and sealing-wax, and for other commercial purposes.

Lao (or **Lakh**), a Sanscrit word, meaning a mark, used in India to indicate a lac (or 100,000) rupees.

Lace, a delicate fabric of linen, silk, or cotton threads, made by hand or machinery, and worked in various ornamental designs. The kinds of lace are many, deriving their distinctive names either from the method employed in production or from the place where any special variety was originally made. The best known makes are pillow or bobbin-lace, woven and plaited by hand; needle-point lace, worked by the needle over a traced design; and machine lace, which practically dates from Heathcote's invention of the early part of the 19th century. Some of the most famed laces are the following:—*Alençon*, a needle-point lace; *Brussels*, a very fine kind, with needle-point sprigs and flowers; *Chantilly*, a silk variety with flowers and openwork; *Cluny*, a net-lace with darned stitch; *Honiton*, a delicate kind with dainty sprigs and figures; *Mechlin*, generally made in one piece and very varied in design; and *Valenciennes*, or bobbin lace of great durability, the pattern and ground of which are made at the same time, being one of the best and most costly of laces, now manufactured mainly in Belgium.

Lacerta, the name of a group of long-tailed lizards inhabiting the warmer parts of Europe and Asia. Also the name of a constellation, lying south of Cepheus, its most important star being only of the fourth magnitude.

Lachesis, a genus of venomous snakes of the rattlesnake family, confined to tropical countries, and including the "dudley bushmaster," of Surinam, and several Crotalide pit-vipers of Guiana and Brazil.

Lacquer, a varnish made from shellac and certain colouring matters, and utilised for imparting lustre to various surfaces of metal or wood. In China and Japan the production of lacquer ware of a decorative character has long been an important industry, bringing into use gold, coral, vermilion, sprinkled, and other lacquers, with pleasing effect.

Lacrimoso, a musical term denoting a mournful method of playing; sadly, with feeling.

Lacrosse, a ball game largely played in Canada, but of Indian origin. See Pears' *Dictionary of Sports and Pastimes*.

Lacrmatory, tube-like vessels of glass found in graves of the ancients of the urn-burial period, and supposed by some to have been the receptacles of the consecrated tears of lamenting friends, but really used for holding ointments or perfumes.

Lacs-d'Amour, a cord of running knots worn on the arm at one time by widows and unmarried women to denote their condition.

Lactic Acid is revealed in its commonest form in sour milk, but is found also in the fermentation of certain vegetable juices and putrefying animal matters.

Lactic Ethers, three different ethers, containing the same monatomic radical derivable from lactic acid, viz. ethylic lactate, diethylic lactate, and monoethylic lactate.

Lactometer, a tube or instrument for ascertaining the proportion of cream in a quantity of milk. Called also a galactometer.

Lacustrine Deposits, a geological term referring to the strata deposits at the bottom of lakes which by the regularity of their occurrence afford favourable opportunities for scientific study.

Ladder, a framework of portable steps, made of wood or metal. There are innumerable varieties, according to their uses. Thus, the standing-ladder, the step-ladder, scaling ladder, companion ladder, collapsible ladder, etc.

Ladybird, the common name of a numerous class of beetles—the Coccinella. The insect is usually of a red or yellow colour with small black spots. It can fly easily, but as it crawls over leaves or walls its progress is but slow. Ladybirds are of good service to the gardener by reason of their destruction of plant lice, amongst which they lay their eggs; and as the larva come to life they feed on the lice.

Lady-Day, the day of the festival of the Annunciation of the Virgin Mary, March 25th. One of the four English quarter days.

Lagoon, a stretch of shallow water opening out upon the sea. The most familiar example is that of Venice, which is built on lagoons.

Lake Dwellings, the name given to certain prehistoric habitations originally built above the waters of lakes or rivers, evidences of which have been found in Switzerland, Britain, and other parts of the old and new world. They were erected on platforms supported by piles, the stumps of many of which still remain. The most valuable evidences in this connection, however, are the recovered fragments of pottery, bone, flint, bronze and iron implements, as well as some few human skeletons, affording interesting testimony to the primitive existence led by the lake dwellers.

Lakes are bodies of water collected in depressions of the earth's surface. The most notable lakes are the Great Lake series of North America, including Lakes Superior, Michigan, Huron, Erie, and Ontario, all discharging into the St. Lawrence River. Africa has an enormous area of lakes, including the Albert Nyanza and the Victoria Nyanza, forming the sources of the White Nile, lakes Tanganyika, Nyassa, Tchad, etc. Smaller lakes are numerous in other countries—Switzerland, Germany, Italy, England, Ireland, Scotland, all having their lake regions, where the scenery is invariably beautiful and romantic.

Lake School, the name given, at first in ridicule, to a distinguished trio of poets—Wordsworth, Coleridge and Southey—who made their homes in the English Lake District. The term means little, however, in point of literary classification, as there was little real affinity of thought between the three poets named.

Lalo, the leaves of the Kholab, dried and powdered; a favourite food of certain African tribes.

Lama, the high priest of the Tibetan Buddhists, usually styled the Grand Lama, and supposed to be the incarnation of Adibuddha, lives in a palace at Lhasa. A British mission, sent out to compel the removal of certain trade restrictions, took possession of Lhasa in 1904, from which the Lama had previously fled. The result was the election of a new Lama and the signing of a better trading treaty. In 1910, Chinese action compelled the Dalai Lama to seek refuge in India, when he was deposed by the Chinese government; but in 1912 he returned to Tibet, and, although he was still opposed by China, British intervention prevailed and he was allowed to remain.

Lamaleim, the form of Buddhism prevalent in Tibet, with a very exclusive sacerdotal organisation, of which the Grand Lama is the head.

Lamelibranchiata, a class of molluscs, apparently headless, with lamellicorn gills. The body is enclosed in a pair of lateral valves divided across the back and held together by a hinge.

Lamellicornia, a class of insects of the Coleoptera order, remarkable for their lamellicorn antennae with club-like terminations. They are herbivorous and number several thousand species, the best-known representatives being the stag-beetles and cockchafer.

Lamination, a geological term designating a class of rocks with thin cleavages, such as slate or shale.

Lammas Day is one of the oldest of the Church festivals, probably derived from the loaf-mass (Hilf-messe) of the Anglo-Saxons. It occurs on August 1. In the olden times it was the day when loaves were given in place of first-fruits offerings.

Lammerfleur, the bear's paw, a variety of Alpine regions, and the largest of European birds of prey. It has a white head with black tufts at the base of the bill, and its general plumage is dark brown, nearly black. It mainly inhabits the mountain ranges of Southern Europe and Northern Africa, and extends to China.

Lampblack, a carboniferous pigment obtained from flame-smoke, and now produced in specially constructed furnaces in which bodies rich in carbon, such as tar, resin, petroleum, etc., are burned. The smoke or soot resulting is collected from the sides of the furnace, and forms lampblack, which is largely used in ink and paint manufacture.

Lamprey, an eel-like fish found in the rivers and on the sea-coasts of Britain and other temperate regions. It has a circular suckorial mouth and teeth, and lives on other fishes. There are three British species, the River Lamprey, the Small Lamprey, and the Sea Lamprey, which attains a length of 3 feet. Some lampreys spawn in the higher reaches of rivers.

Lamps are vessels for holding an illuminating agent, and in modern times are of many kinds. In Anglo-Saxon times they were made of horn. The first public street lamps were oil lamps, London being lighted in this manner in 1681. Gas lamps were introduced in 1814. A great advance was made in domestic lamp illumination by Argand, a Frenchman, in 1789, a lamp invented by him having a circular burner or wick, and by the admission of a current of air oxygenised the flame. This procedure, together with the enclosing glass tube adopted, greatly increased the brilliancy of the light. Among the more distinctive lamps of later times are the various electric lamps, the incandescent gas lamps, the paraffin oil and naphtha spirit lamps, the kerosene lamp for burning under water, and the Davy safety lamp for colliery use.

Lance, a military weapon carried by cavalry regiments, and consisting of a long spear for hurling at or charging an enemy with. The war-lance of the Middle Ages was about 16 feet long, the present-day lance rarely exceeds 11 feet.

Lancelot, a sea-fish of slight development, without skull or brain and having for backbone a gelatinous rod devoid of ribs. It is not uncommon around the British coasts, living mostly in the sand.

Lancers, light cavalry soldiers armed with lances. Most European armies contain regiments of Lancers the Russian Cossacks, the German Uhlans, etc.,—but there were no regiments of Lancers in England before 1816.

"Lancet," the name of the chief English medical journal, established in 1843 by Dr. Wakley.

Lancewood, a hard, durable, and elastic kind of wood obtained from certain trees of the order of the *Anonaceae* order, and much used in coach-building; in Guiana, the wood is called Yari Yari.

Land is the earth's surface, or, more strictly, that portion of it which is unsubmerged. The total land area of Great Britain is 55,201,000 acres. In 1851 the land and houses of the United Kingdom yielded an aggregate rental of £395,000. In 1882 there were nearly a million land-owners in England and Wales (exclusive of the metropolis), 723,000 of whom owned less than one acre. It is estimated that more than half of the land of the kingdom is now possessed by about 7,000 persons.

Landauf, a kind of carriage, originally made at Landauf in Germany, its distinguishing feature being that the covered top is in two parts and can be let down or put up as required.

Land Crab, a family of crabs which live mainly on land, though as a rule migrate to the sea to deposit their eggs. When their offspring attain full development in the water, the old crabs return to their inland quarters, taking their young ones with them.

Land League, an association formed in 1879 by Parnell and others for compelling a reduction in the

rents of land in Ireland, and in case of non-compliance refusing to pay rent. For a time this League exercised great political influence and was an important aid to the Home Rule agitation.

Landrill, popularly known as the Comcrake, is a regular summer visitor to Britain, and is well known by its harsh and piercing note, so familiar in com-lands in the night-time.

Landslip, a breakage of a mass of soil or rock away from a mountain, hill, or cliff, due to a variety of natural causes, such as the saturation of the earth by water or the decay or slipping of portions of rock. Many serious landslips have occurred from time to time. In 1678, an earthfall happened at Plurs, on Lake Como, involving the destruction of many buildings and the loss of numerous lives. In 1806 a portion of Rossberg mountain in Switzerland slipped from its position, and falling into the valley below buried many villages and hamlets and over 8,000 people. A chalk cliff from 200 to 150 feet high and three-quarters of a mile long fell at Lyme Regis, in Dorsetshire, in 1830, doing terrible damage. Over 200 people were killed by a landslip in Nynee Tal, in India, in 1880; and at Quebec, in 1889, a rocky eminence called Cape Diamond gave way, many buildings being destroyed and lives lost.

Language, words by which thoughts are uttered or expressed, is divisible into many groups. There were thirteen principal European languages: Greek, Latin, German, Slavonian, Welsh, Breckan, Irish, Albanian, Tartarian, Illyrian, Jazygian, Chaucian, and Finnic. Italian, French, Spanish, and Portuguese are offshoots of the Latin tongue. The Teutonic is the foundation of the present German, Danish, Swedish, Norwegian and English languages. Turkish is a Tartarian dialect. There are 3,000 languages or dialects spoken throughout the world.

Langue d'Oc, an ancient French dialect—the language of the Troubadours—confined to the country south of the Loire. It derived its name from the fact that it used *oc* instead of *oui* for the affirmative.

Langue d'Oul, the old northern French dialect, distinguished by the use of *oui* for the affirmative, in contradiction to the *langue d'oc*, just noticed.

Languria, a beautiful kind of small arboreal beetles of metallic sheen, inhabiting moist parts of the world, and peculiar because of their short antennae. The *Langurina* sub-family includes the "Ladybirds."

Laniidae, constitute the hawk family of birds, of which there are about 200 widely distributed species.

Lanner, the name of a distinguished member of the falcon family, chiefly inhabiting the countries around the Mediterranean.

Lantern, a case for enclosing, holding, or carrying a light. In its earliest form it was made of horn, and called a lantern, but the name now covers a variety of forms, from the large stationary lantern of a light-house to a Chinese collapsible paper lantern. See **Magic Lantern**, etc.

Lantern Fly, the name of a class of insects of the *Psyllora* genus, with muzzle-shaped heads which are said to emit a light like that given forth by fireflies in the dark. They occur in China, Brazil, and other hot countries, but recent naturalists dispute the actual luminosity of the insect.

"**Lantern of England**."—Bath Abbey possesses so many windows that it is called sometimes the "Lantern of England." It was a "Popish service" held at Bath Abbey by James II, that induced Bishop Ken to sign the invitation to William of Orange, though he afterwards repented and became a Non-Juror. Among numerous interesting monuments Bath Abbey contains that of Malthus, whose *Essay on Population* gave the first inspiration to Darwin.

Lanthanum, a scarce metal discovered by Mosander in 1831, found in association with didymium in the oxide of cerium.

Lapidary, a cutter of, or dealer in, precious stones; also used in adjective form in regard to the working, engraving, or setting of stones.

Lapis Lazuli, an azure blue mineral found in limestone and granite, from which the ultramarine pigment is obtained. The best comes from China and Persia.

Lapwing, or Plover, is a familiar bird on the moors and marshy places of Britain. It is often called the "peewit," from its cry. Its back and wings show green, violet and purple tints, and the under parts are white. It carries a black crest. Plovers' eggs are a table luxury much esteemed.

Leeward, is the old nautical term indicating the left-hand side of a ship, now more commonly called the port side.

Larch, a family coniferous tree in the mountain region of northern Europe, and though not native to Britain, the Common Larch is successfully cultivated in various parts of the kingdom. It is one of the best of all turpentine yielding trees, and the bark is valued for tanning.

Larceny in its broad significance means the fraudulent taking away and appropriation of the personal goods of another. Larceny is of two kinds: *simple larceny* which is theft apart from accompanying aggravation; and *compound larceny*, that which is rendered more serious by being combined with assault, or forced entrance into an enclosed place, such as a house or shop.

Lard is the clarified fat of swine. Originally it was almost exclusively used in cooking, but now it is also utilised for a variety of commercial purposes, such as the making of lubricating oil, the manufacture of candles, etc.

Lares were tutelary deities of the ancient Romans, and of two classes, *Lares domestici*, the household gods, and *Lares publici*, the gods of public places. Both classes were represented by images or statues.

Laridae, a family of web-footed swimming gulls, white and pearly blue in colour, very widely distributed over the sea coasts of the world and feeding mainly on fish.

Lark, a family of birds (Alaudidae) of which there are about 100 species, some of which—notably the skylark—are famed for their marvellous singing and soaring qualities. They build their nests on the ground in the open country. Britain has six species, of which the skylark and the woodlark are the best known. Africa has the greatest number of larks; America has only one species, the horned lark, but it is not a true Alaudid.

Larkspur, the common name of the genus *Delphinium*, a favourite flower introduced into British gardens from Switzerland in 1573.

Larva, the undeveloped form of any animal which, before maturity, undergoes metamorphosis. The term was formerly used only to designate insects in the caterpillar stage, but now takes in the larval forms of the frog (the tadpole) and numerous other early stages of animal existence.

Lascar, commonly an East Indian sailor engaged in British or foreign service. The name is also given to East Indian camp followers and regimental servants.

Lastage, a shipping term referring to the lading of a ship, and also formerly a duty for the right of conveying goods by a ship.

Lattice, a triangular sail affixed to a tapering yard, much used on light cargo vessels of the Mediterranean.

Latent Heat is a term expressing a condition in which, when a solid is converted into a liquid, or a liquid into a gas, a certain amount of heat is absorbed, and, having no effect on the thermometer, is described as latent.

Lateran Councils were the eleven religious conventions held in the Lateran basilica at Rome for deciding important questions of Church doctrine. The first was held in 449 to deal with the Monothelites; three were held in the 12th century, one in the 13th, and the rest in the 16th. That of 1179 formulated the laws for the election of Popes; and that of 1215 pronounced in favour of the Crusade.

Laterite, a peculiar ferruginous kind of rock, extensive beds of which are found in India and Ceylon. Much of it belongs to the Tertiary period.

Lateral flexion, a scientific and pathological term signifying "a bending aside."

Latesa, a genus of fishes of the perch family. There are only three species, two of which are found in the Nile and in Queensland, while the third is confined

to Australian rivers only. It attains the length of from 2 to 3 feet.

Latitude is the extent of the earth or the heavens reckoned from the equator to the pole, and was first determined by Hipparchus, of Nice, about 162 B.C.

Latitudinarians, a body of theologians whose object was to enlarge the scope of the Anglican Church so as to bring the Nonconformists within its fold, and included such eminent 17th century divines as Burnet, Tillotson, Hales, and Chillingworth. At the present day the term is applied generally to such as are opposed to doctrines and forms of any kind.

Laughing Gas is nitrous oxide, and received its name from the fact that on being inhaled its first effect was to produce exultation. It was one of the earliest anæsthetics, and is much used in dentistry and for minor surgical operations.

Laughing Jackass. (See **Kingfisher**.)

Laughing-stock, a butt for ridicule, a person or an object provoking scornful hilarity.

Laughter, a convulsive action of the respiratory muscles, accompanied by a succession of short vocal sounds, induced by sudden joy or mirth.

Launce, a family of eel-like sea fishes found in large numbers on the coasts of North America and Europe. There are two species common to British waters. These fishes are of a bright silvery hue, and live much in the sand underneath the water. They are much prized as bait.

Laundry, any room or building in which the work of washing and ironing of clothes is carried on. Steam laundries have become common in recent times, and in many ways—the introduction of improved washing soaps, and of labour-saving contrivances generally—laundry operations have been greatly simplified.

Laureate. (See **Poet Laureate**.)

Laurentian System refers to a group of rocks in the region of the Upper Lakes of Canada, representing at some points a thickness of 30,000 feet. No fossils are found in this group, and the inference is that it is the most ancient known.

Laurel Seed, a monobasic acid obtained from the oleaginous principle of pichunum beans, and from butter, coconut oil, etc.

Lava, the molten fluid rock which is ejected from a volcano while in eruption.

Laver, the popular name of certain varieties of seaweed, *Paphys*, which attach themselves to rocks and are used as food or condiment.

Lawn, very fine sun-bleached linen, in olden times called "cloth of Rheims."

Lead, a soft malleable metal, occurring in numerous ores, which are easily smelted. It is found in its native form in small quantities in Sweden. Lead is largely used in the making of service pipes on account of its pliability; and as an alloy element it combines in the formation of type metal, stereo metal, shot metal, pewter, and many other compounds. Lead mining is carried on in several of the northern counties of England and in Wales. Our chief imports are from Spain. The lead output of the world now averages over 1,000,000 tons per annum, of which about one-fourth is raised within the British Empire, Australia being the chief British lead-producing region.

Leaf-insect, a peculiar class of insect which in colour and form so closely resembles a leaf that it is difficult to distinguish the one from the other. The genus is entomologically styled *Phyllium*, and one variety is familiarly known as the "walking leaf."

Leagues, or combinations of kings, countries, or communities, have been frequent since the kings of Canaan united against the Israelites. Among the most famous leagues may be mentioned the Holy League which prevented the accession of Henry IV of France until he became a Roman Catholic; the Solemn League and Covenant of Scotland in 1638; and the League of Augsburg against France in 1686.

Leap Year (or **Bissextile**) was fixed by Julius Cæsar, 45 B.C. as an addition of one day in every four years bringing the measure of the calendar year even with the astronomical year, with three minutes per year over; this again is levelled up by dropping leap

year at stated intervals. Thus 1700, 1800, and 1900 were not leap years, but it will be some centuries now before another rectification will be required.

Leather was made in ancient Egypt, Greece, and Rome, and has through succeeding centuries played an important part in the service of man. It consists of the dressed hides or skins of animals, after the process of tanning has been gone through. Untanned skins are known as pelts. Leather is classed either according to the skins from which it is made or the system of preparation employed. The best-known kinds are morocco, kid, Russia, chamois, Cordovan, grained, patent, russet, tan, calf, Hungarian, etc.

Leaven, a mixture of flour and sour milk, formerly used in fermenting large quantities of fresh dough, a preparation now superseded by yeast.

Leech, an aquatic blood-sucking worm, mostly found in fresh-water ponds. Each end of the body is provided with a sucker, but that at the head end has jaws and teeth. The medicinal leech has three jaws. The leech attaches itself with avidity to animal bodies and sucks until glutted. This medicinal leech is common in the South of Europe; the dark-hued Horse Leech is the most common species in Britain.

Leeward, a nautical term, meaning in the direction of the wind.

Legal Tender of Gold is good in this country to any amount; of Bank of England notes for any sum above £5, except in certain circumstances by the bank itself; silver is legal tender up to 40s., bronze up to 1s., farthings up to 6d.

Legend, a story in which the marvellous, supernatural or mythical is a leading feature. The earliest forms of legends were the stories of the lives of the saints.

Legerdemain, sleight of hand, conjuring, juggling, a kind of performance in which trick and dexterity of hand deceive the eye and give the impression of feats that are naturally impossible.

Legion, a body of Roman troops, varying in numbers at different periods. Under Marius a legion consisted of 6,000 soldiers, besides 700 horse. Augustus, when a army was composed of 45 legions, with the addition of 25,000 horse and 37,000 light armed troops. A legion was divided into 10 cohorts, and every cohort into three companies, each containing two centurions. Three legions composed the Roman army of occupation in Britain.

Legion of Honour, the French order for distinguished services, military or civil, was instituted by Napoleon I. in 1802, and confirmed and modified under later rulers. There are five grades—Grands Croix, Grands Officiers, Commandeurs, Officiers, and Chevaliers.

Legitimists, supporters of the claim; of the elder branch of the Bourbon family to the throne of France. The death of the Comte de Chambord in 1883 childless transferred the right of claim to the Comte de Paris, head of the younger Bourbon branch.

Legumin, a nitrogenous proteid substance obtained from peas, beans, and similar plants. It is also called "vegetable casein."

Leipsoa, a kind of pleasant native to Australia, nesting in mounds. It has a crested head and dark plumage.

Lema, the North American potato beetle, a voracious little insect, with yellow head and body marked with three longitudinal deep black stripes. The famous Colorado potato beetle belongs to the *Phytophaga* tribe, as does also the "Turnip-jack," the larvæ of which are the plague of the British farmer.

Leemming, a small light brown rodent with dark spots, abounding in Scandinavian countries and in Siberia. There is an American species found in the Hudson Bay region. The leemming is about 5 inches long, with a short stump of a tail.

Lemur, a group of mammals nearly allied to monkeys, noted for having strong plant toes enabling them to use their feet as hands, and also well-developed thumbs on the hands. They have long squirrel-like tails and fox-shaped heads, and are distributed over the tropical parts of the old world.

Lenses are, broadly speaking, either *convex*, having the thickest part in the centre and magnifying objects, or *concave*, with the thinnest part in the centre and reducing the objects. Each kind has

several varieties, peculiar from their proportions, arrangement, and specific effects.

Lent, the 40 days period of fasting that precedes Easter.

Leo, one of the 12 signs of the Zodiac, bounded on the west by Cancer, and on the east by the Virgin. The constellation consists of 75 stars, one of which is Regulus.

Leopard, a well-known carnivorous spotted mammal, an inhabitant of Africa and Asia. Its skin has a light tawny ground, which is covered with dark brown spots.

Lepidodendron, a fossil plant of gigantic height (nearly 100 feet) bearing a cone-like fruit, frequently met with in the coal strata.

Lepidoganoidea, the second sub-order of the ganoid fishes in Owen's classification, their bodies being covered with scales of moderate size.

Lepidoptera, an order of insects embracing the various species of butterflies and moths.

Lepidostreus, a genus of ganoid fishes, whose sole surviving representative is the Mud-fish, confined almost exclusively to the Amazon.

Leporidae, the scientific name of all animals of the hare and rabbit family.

Lepus, the constellation of the Hare, situated under the Orion group, and one of the constellations with which the ancients were familiar.

Lerrama, a parasitic crustacean which is more fully developed in its young than in its adult existence. After entering upon its parasitic stage it has no use for external organs and loses them. Its presence is believed injuriously to affect the vision of the fishes upon which it is parasitic.

Lettres de Cachet, sealed letters which the kings of France issued to their agents to secure the imprisonment of distrusted or disliked persons without trial. Abolished in 1789.

Leucellin, a crystalline, pulverulent substance produced by the decomposition of nitrogenous matter, otherwise known as amido-caproic acid, and called leucine because of its whiteness.

Leuciscus, a genus of fishes of the Carp family, distributed over the waters of all temperate regions, and comprising some 90 species. The roach, chub, and dace are of this family, also the white mullet and the minnow.

Lèveé, a State reception by the king attended only by gentlemen.

Lewellers, an English military-political party prominent about 1649 in the Parliamentary army, and advocated the levelling of social distinctions.

Lever, a rod-like bar of metal or wood used for raising heavy bodies, and worked by means of a support called the fulcrum placed at a given distance underneath the lever.

Lewis, a contrivance of stone-lifting, the principle of which was known to the ancient Romans; it consists of two dovetail tenons of iron or other metal, expanded by an intervening key in a dovetail-shaped mortice in the stone, and slackened by a ringed bolt to the hoisting chain.

Leyden Jar, an apparatus for accumulating electricity, invented by Cuneus of Leyden in 1746, and consisting of a jar coated inside and out with tinfoil for about two-thirds of its height, and having its inner coating connected with the top by a brass knob and chain. Thus an electric charge is set up, and a number of jars will constitute a battery.

Li, a Chinese distance measure, about the third of an English mile. Also a Chinese weight, the thousandth part of an ounce, or liang.

Lias, a geological term referring to the lower section of the Jurassic group, and mainly comprising shales and limestones.

Libel, any writing, printed matter, picture or illustration put forth with malicious intent for the purpose of bringing a person into public ridicule and contempt. An aggrieved person may proceed either by civil action or criminal indictment. A good defence is that the words complained of are true and to the public advantage to be made known. Since 1861 no newspaper proprietor can be criminally prosecuted for libel without the fiat of the Public Prosecutor. A spoken libel is *slander*.

Libra, the Scales, one of the twelve Signs of the Zodiac, lying east of the Scorpion.

Liberals, a political party name that came into vogue about 1828 to designate the advanced Reformers.

Liberal Unionists, the portion of the Liberal party which separated from Mr. Gladstone on the Home Rule question in 1886, and afterwards became allied with the Conservatives. On the introduction of Mr. Chamberlain's Tariff Reform policy many Liberal Unionists withdrew from the alliance, and continued to support Free Trade. Apart from this, Liberal Unionists have acted with the Conservatives, and now the term Unionists covers all sections of the Conservative party.

Libraries, before the invention of printing, were few and only got together at enormous cost. A Nineteenth century library, consisting of tablets of baked clay, have been discovered. A public library existed in Athens in 540 B.C. The library at Alexandria, destroyed when Julius Caesar set fire to the city, 47 B.C., contained 400,000 valuable MS. books. Among the great libraries of later times may be mentioned the Vatican Library at Rome, founded in 1588; the Royal Library at Paris (1790), now containing over 2,000,000 vols.; the Astor Library, New York; and in England, the Bodleian Library, Oxford, and the invaluable British Museum Library at Bloomsbury, the latter containing over 2,000,000 vols. Since 1859, Free Libraries have been established in all the chief cities and towns of the kingdom, and Mr. Andrew Carnegie has devoted several millions sterling to the building and endowment of such institutions in America and the United Kingdom.

Library of the India Office. This interesting library contains some 12,000 manuscripts, including over a thousand volumes of Arabic documents in a general collection, and nearly 3,000 taken from the Mogul archives upon the fall of Delhi, when some 2,600 Persian manuscripts were also taken. There are 3,000 Persian manuscripts in a general collection. The library also comprises Pali, Burmese, Singhalese, Malay, and Javanese paper and palm-leaf writings, and 336 volumes of Tibetan and 921 volumes of Chinese block prints, besides many miscellaneous documents collected by Hodson and Wilson, and some 880 volumes of English and European manuscripts of historical value, severally collected by Orme, Mackenzie, Elliott, Buchanan-Hamilton, Wilks and others. The other department of the library—that of printed books—has two divisions, the "Red" or Oriental side, comprising some 14,000 volumes in Eastern languages or translations therefrom, and the "Blue" or European side, which contains no fewer than 42,000 volumes. Every facility is given to reputable literary workers to refer to or take away on loan any books or manuscripts.

Libration, an astronomical term referring to an apparent irregularity in the moon's course, which may be due to irregularity in longitude or diurnal, and due to a variety of causes.

Libyan, a group of languages spoken by tribes inhabiting the mountain districts of Barbary.

License, special permission to do or sell certain specified things, usually such as are liable to excise duty. Licenses are required for keeping carriages, dogs, for shooting game, for hawking and peddling, for selling beer, ale, wines and spirits, tobacco, patent medicines, etc. Excise duties in the United Kingdom produce over thirty millions sterling.

Lictor, a public functionary of ancient Rome whose duty was to carry out the orders of the magistrates, punish offenders, and attend upon his superiors on all public occasions.

Lien, the right by which a person holding personal property of another can retain possession of it until some claim that he has against the owner is satisfied.

Lieutenant, a title implying the holding of an office under or for a superior. Thus, a Lieutenant-General is next under the full General, and takes his place in his absence, and so also with regard to Lieutenant-Colonels. When the title is held alone it ranks in the army next to the Captain, and in the navy next to a Commander.

Life-Boat was invented in 1785 by Lionel Lukin, and in 1790 a greatly improved boat was introduced by Henry Greathed, who received a parliamentary grant of £1,200 for his invention. Later boats are a great advance upon Greathed's. The Royal National Lifeboat Institution, founded in 1824, has the lifeboat service of the United Kingdom under its control. Over 47,000 lives have since been saved by the lifeboat service and considerably over a quarter of a million sterling has been paid in pecuniary rewards. Two hundred and eighty-three lifeboats are maintained at the expense of the institution.

Life-Guards (see **Guards**).

Light has a velocity of 186,000 miles a second, eight minutes suffering for light to travel from the sun to the earth, a distance of 99,790,000 miles.

Lighthouses to warn ships of dangerous places and indicate coasts, points, harbours, etc., have existed since the building of the first Pharos at Alexandria, 85 B.C. In early lighthouses the lights were simple fires. A coal fire light was shown at Tynemouth Castle Lighthouse in 1638. There was no great advance made in lighthouse building until the first Eddystone erection was put up in 1759-60 (see **Eddystone**). The whole problem of lighthouse building and lighting, invested though it has been with tremendous difficulties, may be said to have been mastered within the last century; not only are the present structures impregnable to storm and tempest but the light that they are supplied with is a thousand times more brilliant than under the older systems. The introduction of parabolic mirrors was a great improvement, providing a reflecting medium that carried to a great distance. Further improvements were made by Fresnel, Stevenson, and others, and now the electric light has been adopted to a large extent with ample success. The whole of the lighthouses of England are under the control of Trinity House; Commissioners of Northern Lighthouses control those of Scotland; and the Irish lighthouses are controlled by the Dublin Ballast Board.

Lightning is an electric discharge from the clouds, and is usually *forked or sheet*. The former is the more dangerous.

Lightning Conductor, a metal rod, the upper part of which is of copper with a conical point, the lower portion being iron, which extends into the earth. Its effect is to gather to itself the surrounding electricity and discharge it into the earth, thus preventing its falling upon the protected building. In ships, lightning conductors are fixed to the masts and carried down through the ship's keel-sheathing.

Lignin, a substance found in the cell walls of plants, and present in all woody fibres.

Lignite, an intermediate substance between peat and coal; it is, in fact, undeveloped coal, and known as brown coal.

Liliputian Armies.—The smallest army in the world is that of Monaco, with 25 guards, 25 carabineers, and 20 framen. Next comes that of Luxembourg, with 135 gendarmes, 170 volunteers, and 60 musicians. In case of war, says the law, "the number of volunteers may be temporarily raised to 250." In the Republic of San Marino they have universal compulsory service, with the result that they can put in the field nine companies, comprising 950 men and 38 officers, commanded by a marshal. This, however, is the war strength of the forces. On a peace footing the Republic can only put one company of 50 men on the parade-ground. In the case of the Republic of Liberia, the most striking feature is the proportion of officers to privates. There are 800 of the former and only 700 of the latter. None the less, the Republic issues proclamations of neutrality when wars break out between the great Powers of Europe.

Limburger, a specially strong kind of cheese made at Limburg, a province partly in Holland and partly in Belgium.

Lime, an alkaline earth obtained from kiln-heated limestone, and used in making mortars and cements, also as manure for difficult soils, and in tanning.

Limelight is produced by directing an oxy-hydrogen flame upon a piece of quick-lime, which reflects a brilliant white light. This stream of light gathered

in a lantern is used for illuminating objects—on the theatre stage, for instance—with an intense brilliancy, and for signalling and other purposes.

Limestone is carbonate of calcium. It is found in every geological formation, and is highly fossiliferous. Marble is limestone of a specially hard kind.

Limpet, a well-known marine mollusc with a single-valved shell, generally found sticking close to seawashed rocks.

Linen, a textile fabric manufactured from flax fibre, known to the ancient Egyptians, and first manufactured in England under Henry III by Flemish weavers. The chief seat of the manufacture is the North of Ireland, with Belfast as the centre. Dundee and Leeds are also large linen-producing towns.

Ling, a sea-fish common on the coasts of Britain, and abounding in more northern waters. It averages from 3 to 4 feet in length, and is a voracious feeder, living chiefly on small fish.

Linsed, the seed of the flax plant, containing, apart from its fibrous substance, certain oil and nitrogenous matter of considerable commercial value. This yields linseed oil, and what is left is converted into cattle food.

Lion, the chief representative of the Felidae and Carnivora, now chiefly found on the African continent, though at one time it must have roamed over Europe, fossil lions having been discovered in Britain. Its large square head, its flowing mane (in the males only), and its tufted tail distinguish it from other animals.

Lion and Unicorn, the supporting figures of the royal arms of Great Britain, date from the union of Scotland with England at the accession of James I (James VI of Scotland), the lion representing England, and the unicorn Scotland.

Liqueurs are essences combined with alcoholic liquid, and are of many kinds, named according to their flavourings or place of production, and include Maraschino, Chartreuse, Curacao, Benedictine, Noyau, Kummel, etc.

Liquid, the name popularly given to any flowing substance. The line of demarcation between the most flexible solid and the thickest liquid is almost imperceptible. All liquids are composed of molecules or particles.

Liquorice, a juicy substance obtained from the root of the *Glycyrrhiza glabra*, and used in the making of sweetmeats, and as a throat remedy. Pontefract is the chief seat of the trade in England, what are called Pontefract (or Pouffret) cakes being made from liquorice.

Lira, an Italian silver coin, equal to 100 *centesimi*, and worth in exchange about 83d. English.

Litanies were first used in church processions in the 5th century. The first English litany was commanded to be recited in the Reformed churches by Henry VIII in 1534.

Lithium, obtained from an alkaline substance named lithia, was discovered in 1817 by a Swede, Mr. Arfwedson, and is the lightest metal known. It resembles potassium in its chemical composition.

Lithography, the art of writing on stone and printing therefrom, was discovered by Alois Senefelder about 1799, and was introduced into England a few years later. Many improvements in the art have been made in recent years, especially in chromo-lithography.

Lithoscope, an instrument invented by Sir David Brewster in 1864 for distinguishing precious stones.

Litmus, a special kind of colouring matter produced from certain lichens by fermentation and ammoniacal treatment. The resulting colour is violet, which can be converted into various blues and reds. It is turned red by acids and blue by alkalis.

Litre, a French measure both for liquids and dry articles. In the former measure it is equal to 1.76 imperial pints; in the latter to a cubic decimetre.

Liturgy, the name given to the Church ritual, though strictly applying only to the portion used in the celebration of the Eucharist. The present English liturgy dates from 1547-8, when it received the approval of Parliament.

Livre, an old French coin, the equivalent of the present franc. Not current since the 17th century.

Lizard, the name given to a diversified family or reptiles, of which there are about 2,600 species. (See the different class names.)

Llama, a South American ruminant animal nearly allied to the alpaca, and of the same structure as the camel, except for the hump. It is domesticated and utilised as a beast of burden, as well as for its wool, though the latter is not so long as that of the alpaca.

Loach, a fresh-water fish, a common habitant of British rivers and streams. It has several barbels around its mouth, and is of a darkish-green colour on the back, with darker stripes and spots.

Lodestone, an oxide of iron, is found chiefly in Sweden and Norway. Its scientific name is magnetite. It has the power of attracting pieces of iron and possesses polarity.

Loom, soil composed of clay and sand in such proportions as to keep the ground porous.

Lobsters are marine crustacean animals existing in enormous numbers in the northern seas of Europe and America, and in fair proportion on some parts of the British coasts, especially in the neighbourhood of the Channel Islands. A lobster would seem to be overburdened with legs, claws, and other appendages, having no fewer than 30 pairs altogether, but with a use for them all.

Local Government Board, a department instituted by Act of Parliament in 1871 to supervise local authorities and safeguard the public health.

Local Option, a proposal which has several times been before Parliament, but has always been rejected, for giving a majority—usually placed at two-thirds—of the ratepayers of a parish power to prohibit the sale of intoxicants in that parish. The principle is in force in some parts of the United States.

Locust, an insect of the grasshopper family, but much more powerful. They are inhabitants of hot countries, and often make their appearance in untold millions, like clouds, devastating all the vegetation that comes within their course. Some species exist in Britain, but they are small and not very troublesome. The locust-tree (*Ceratonia siligua*) is supposed to have furnished food to St. John the Baptist in the wilderness, and its "beans" have accordingly been styled "St. John's Bread."

Log, a line used for reckoning the speed at which a ship is travelling. It was first used in the 16th century. The line is divided into spaces of 50 feet marked off by knots and measured by a half-minute sand glass, bearing the same proportion to an hour as 50 feet bear to a mile.

Logarithms, a system of calculation invented by Baron Napier in 1614, and developed by Henry Briggs a few years later. It may be briefly described as "the indexes of the ratio of numbers one to another," and represents a great saving of time.

Logic, the science of reasoning, setting forth the principles on which argument can be most effectively conducted and forming conclusions deduced. Aristotle, Bacon, Locke, Whately, Sir William Hamilton, John Stuart Mill, and Herbert Spencer have all been expounders of logic; Earl Stanhope invented a logical machine in the latter part of the 18th century.

Logogram, a phonogram or sign, briefly representing a syllable, word, or phrase; logographic printing was introduced in 1783 by Henry Johnson and Mr. Walker of *The Times*.

Logwood, a family dye-wood, obtained from a tree abundant in the West Indies and some parts of South America. It is red in colour, and is used for producing a variety of shades, from red to black.

Lollards were a body of Reformers who, under the leadership of Wyclif, were subjected to cruel persecution in the reign of Richard II. Sir John Oldcastle was a prominent Lollard, and was burned at the stake.

Lombards, the name given to a community of Italian merchants who settled in England in the 13th century and first became prominent as money-lenders and later as bankers. Lombard Street derives its name from them.

Lombardy Poplar, the common name of the graceful *Populus fastigiata*.

London Clay, a peculiar formation which crops up in various parts of London, notably at Highgate, and is rich in fossils of many kinds—birds, quadrupeds, reptiles, fruits, and fish, indicating a much warmer climate when they flourished than exists to-day.

Londonerry Siege, of by James II's army, began on the 20th April, 1689, and lasted until the 30th July. The garrison and inhabitants were driven to famine, but held on until the siege was raised, and James retired with the loss of 9,000 men.

London Land Values. The price of land in London has increased by leaps and bounds of late years. In the suburbs in recent times land in Fitzjohn's Avenue, Hampstead, realised £9,600 an acre, the agricultural value of which would probably not exceed £50 an acre, the balance of £9,550 representing the unearned increment. The highest prices for the freehold of sites are in the centre of the City, in the neighbourhood of the Bank of England, a price at the rate of over £3,250,000 an acre being attained; that is, £75 per square foot, or more than 10s. per square inch. From the centre the price diminishes, rising again in the Strand to from £12 to £20 a square foot, or from £50,000 to £80,000 per acre. In Bond Street £35 per square foot, or more than £1,500,000 per acre has been reached.

London Museum, estab. at Kensington Palace in 1872 for the conservation of antiquities and other objects relating to London. Transferred to Stafford House (now Lancaster House), the lease of which was presented to the nation by Sir W. H. Lever. The museum was opened by the King in 1914.

Longicornia, a family of large horned beetles found only in warm countries, remarkable for their wood-boring capacity when in the larval state.

Longitude, the distance of any place east or west of the first meridian, which in English maps passes through Greenwich. In French maps the first meridian passes through Paris, in German maps Berlin, in American maps Washington.

Looshals, a nomadic East Indian tribe which still lingers around the tea plantations east of Calcutta, and was guilty of many serious outrages until a punitive expedition was sent out in 1871.

Lord, a title of honour held by such as are peers of the realm, and bestowed on persons who have achieved distinction, or inherited by descent. It is also borne as a courtesy title by the eldest sons of dukes, marquises, and earls, and by the younger sons of dukes and marquises.

Lords, House of, comprises the Lords Spiritual and Temporal, that is, the Archbishops and Bishops, and all the adult Temporal peers from the rank of baron upwards, of Great Britain, as also the Scottish and Irish representative peers.

Loris, a genus of small Lemurs found only in Ceylon, Madras, and Malabar, and comprising now but one surviving species.

Lory, a handsome family of parrots with deep scarlet plumage, green wings, rufous nape, head, and yellow breast line. They belong to the Malay Archipelago and live mainly on fruit juices.

Louis d'Or, a French gold coin of the value of 24 francs, first issued by Louis XIII. in 1640, but superseded by the Napoleon, or 25-franc piece.

Louse, a parasitic wingless insect of the Anoplura order, genus *Pediculus*, exceedingly prolific, and constituting a distressing pest to mammals and birds infested by them. Plant lice are aptids.

Louvre, one of the old royal palaces of Paris, was built in its present form partly by Francis I. and added to by later monarchs, Louis XIV. completing the edifice. Napoleon I. turned it into a museum and enriched it with the plunder of many foreign art galleries. Much injury was done to the building by the Communists in 1871. The great extension to the Louvre building begun by Napoleon I. was completed under Napoleon III. in 1877. "La Gioconda," Leonardo da Vinci's masterpiece, disappeared from the Louvre Gallery in Aug., 1911.

Love Birds are small parrots, mainly of a delicate green plumage with pink, red, and black markings at the neck, belonging to the genus *Agapornis*, and indigenous to Melanesia and the Australian provinces.

Loyalty Loans were emergency loans raised by direct appeal to public patriotism. In 1906 such a loan was asked for by the British Government, and within 12 hours £28,000,000 was subscribed.

Lucifer Matches—that is, matches tipped with an explosive substance that bursts into flame on being struck—were first used about 1834. Many improvements have been made in matches since then, the most important of which was the invention of the safety match, striking on the box only.

Luddites, a secret association of working people formed in 1811, at a period of great distress, with the object of destroying the new textile machinery then being largely adopted, which they regarded as the cause of their troubles. Their first outbreak was at Nottingham, and was stated to have been started by an imbecile named Ned Ludd. Afterwards, serious Luddite riots occurred in various parts of the country, especially in the West Riding of Yorkshire, where many people were killed, mills were destroyed, and numbers of rioters were tried and executed. Charlotte Brontë in her novel, *Shirley*, makes effective use of this period.

Ludlow Formation, a geological term designating the upper division of the Silurian group, which consists of sandstone, grit, limestone and shale, deriving its name from the fact that Ludlow is built on these beds.

Lugworm, a species of worm living on the sea-shores and burrowing in tunnels which it makes in the sand. It is much used for bait by fishermen.

Lumpfish, a carnivorous sea-fish which attaches itself to rocks and other firm substances, and lives on small fish and marine worms. It is mainly an inhabitant of northern seas, and has three species, one of which is found on our own coasts.

Lunar Caustic, or nitrate of silver, is obtained by dissolving silver in diluted nitric acid.

Lunar Month, the period in which the moon makes its revolution around the earth—about 29½ days.

Lupericalia, yearly festivals held in ancient Rome in honour of Pan.

Lupinus, a genus of papilionaceous plants, common in the north temperate zone of both hemispheres, and so-called because the roots penetrate the soil with wolfish eagerness and exhausting effect.

Lupus, the constellation of the Wolf in the southern heavens, at the east side of the Centaur. It contains no star of more than the third magnitude. Lupus in pathology designates a spreading tuberculous inflammation of the skin, to the alleviation of which the "light cure" has latterly been directed.

Lurcher, a domestic dog formed by interbreeding between the greyhound, the sheep-dog, and the spaniel, and a silent pursuer of hares and rabbits.

Lusitad, a famous Portuguese epic poem by Camoens, celebrating the establishment of Portuguese sway in India; first published in 1571.

Lustrum, a sacrificial celebration occurring every five years in ancient Rome after the taking of the census. From this each period of five years was called a lustrum.

Lute, an ancient stringed instrument, introduced into Europe in the 6th century, and at one time popular, but now superseded by more elaborate instruments.

Lusonite, a massive mineral, black, brittle, and metallic of lustre, largely composed of copper and sulphur, and closely related to enargite; found near Luzon in the Philippines.

Lydian Stone, a dark coloured rock composed of quartz mixed with oxide of iron and clay, and often used as a touchstone for testing gold alloys.

Lye, the chemical term for a solution of an alkali, used in making soaps and for various other purposes.

Lynch Law is the dealing out of summary punishment on offenders by private individuals without appeal to the law. It gets its name from one Charles Lynch, a Virginian planter, who in the latter part of the 18th century was accustomed to take into his own hands the punishment of offenders. Instances of lynch-law are still frequent in the United States, and generally result in the carrying out of a rough and ready death sentence, negroes being mostly the victims.

Lynx, a carnivorous mammal of sturdy build, with tufted ears and spotted fur, inhabiting many parts of the world, including Northern and Central Europe. It commits serious ravages among sheep and goats, and is very fierce.

Lyon King of Arms, the President of the Scottish Lyon Court, and head of the heraldic organisation for Scotland.

Lyra, the constellation of the Harp, situated between Hercules and Cygnus, comprising twenty visible stars, the principal of which is Vega, one of the most brilliant of all the stars.

Lyre, an upright stringed instrument held in the hand, and famous in ancient Greece and Rome.

Lyre-Bird, a remarkable genus of Australian birds, the males of which possess a beautiful lyre-shaped tail. The bird is not more than 15 inches long, but its tail, which it carries erect, is 23 inches in length.

Lytta, a genus of beetles, found in Southern Europe and Asia, of the sub-tribe *Trachetia*; the most familiar example is *L. vesicatoria* commonly called the "Blister-fly."

M

Macao, Buffon's name for the Ring-tailed, or cat-like lemur, indigenous to Madagascar.

Macadamising, the system of road-making invented by John Macadam in 1819. The road bed is laid with hard broken stones, of a nearly uniform size, which by the weight of the traffic alone soon assume firmness. Nearly all the main country roads are macadamised.

Macaque Monkey, a long-tailed, large-shouldered, olive-brown, black-spotted genus of the Catarrhine monkey, common in the Malay Archipelago.

Maaroni, a name applied to a class of society fops whose extravagant dress and manners were much ridiculed in the 18th century.

Macaw, a genus of large parrots with brilliant scarlet and sky-blue plumage, with interminglings of green. Native to South America and Cuba.

Maccabees, a patriotic Jewish family whose achievements in early history were very notable. The revolt of the Maccabees in the 2nd century B.C., in which Judas captured Jerusalem and purified the Temple, is the most famous exploit connected with this historic name.

Mace, an ensign of authority borne before officers of state and other dignitaries. The more particular maces of the present day are those of the Lord Chancellor, the Speaker of the House of Commons, the Lord Mayor of London, and other mayors. In ancient times there was a cavalry weapon consisting of a spike-club which was called a mace. The mace is still retained amongst the Turkish irregular cavalry. The mace-bearer is the functionary who carries on ceremonious occasions the symbol of authority before judges and civic or state officials.

Macedonians, a sect formed by Macedonius, bishop of Constantinople, in the 4th century, who denied the existence of the Holy Ghost. The Papal Council expelled the bishop and his followers from the Church in 350.

Machine Organs, defined in the 10th book of *Vitruvius* as "contrivances for the concentration and application of force," and known by the names of instruments, engines, and machines.

Machine Guns are modern weapons of war of a quick-firing and highly destructive capacity. They are of two classes—those firing small-arm ammunition, and those firing shot and shell. Some of these guns have a firing power of over 1,000 shots a minute. The best-known guns of this class are the Maxim, the Gatling, the Gardner, the Hotchkiss, the Nordenfeldt, the Krupp, and the Ehrhardt.

Mackerel, a familiar sea fish existing in large numbers in the northern waters of both hemispheres. In May and June immense shoals are to be found round the British coasts. It is a popular food fish, with beautiful markings.

Macræ, a genus of molluscs of extensive distribution, found in considerable numbers in British

waters, especially in Scotland. The shell valves are of equal size and triangular shape.

Madder, until a few years ago one of the most important of dye-stuffs, largely used in producing Turkey-red dyes, but now superseded by artificially prepared alizarin. Natural madder is the root of the *Rubia tinctorum*.

Mad Parliament, held in 1258 at Oxford when the barons compelled Henry III to appoint a council pledged to carry out certain reforms.

Madrepore, a white coral-like substance consisting of carbonate of lime, formed by the gradual growth of polyp deposits, and abounding in tropical seas.

Madrier, a term in military engineering denoting beam laid in a ditch to support a wall, or in a mine to hold up the sides or roof; also an armoured plank affording protection against hostile fire, or fitted to receive the mouth of a petard in attacks upon obstacles.

Madrigal, a style of unaccompanied musical composition for three or more voices, originally introduced in the Netherlands, and developed in Italy, in the 13th century. Many old English composers achieved great success as madrigal writers, and numerous Madrigal Societies are still in existence.

Madwort, a common name of the botanical genus *plavum*.

Maelstrom, a great whirlpool. The most famous is 'off the coast of Norway, between the islands of Moskenes and Mosken, of the Loloten group, the power of which has been much exaggerated, it being only dangerous at certain seasons.

Maastricht Beds, a dense calcareous formation in the upper division of the *cretaceous* group of rocks existing in the Mastricht region of Holland; containing fossils furnishing the connecting link between the Secondary and Tertiary systems.

Mafia, a secret Sicilian society formed for purposes of vengeance, private and public, prominent about 1860, and responsible for many crimes.

Magenta, an aniline dye discovered in 1859 by Sir V. H. Perkin, and named after the great battle of that year between the French and Austrians.

Maggot, the larva of an insect, a term usually applied to that of the common fly, which feeds upon putrid matters, animal and vegetable.

Magi, priests of the Persian fire-worshippers, who exercised great influence in early times in the East. Their sacred fires blazed in the open air, and around them they performed their mystic rites. Zoroaster, their great reformer, flourished about 550 B.C. In the following century their religion was superseded by Mahomedanism, and the only representatives of the old worship now left are the Parsees of India.

Magio, a term applied to the pretended art of influencing supernatural things. Such an art was seriously believed in by the people of medieval times, and still obtains among certain uncivilised races. Professors of magic in olden times worked their wonders according to certain elaborate systems, and, by the air of mystery with which they surrounded themselves and their operations, contrived to impress the credulous. Magic took various forms—the cure of disease, predictions, and the gratification of personal desires. Thus, there was *black magic*, which communed with evil spirits; *white magic*, dealing with good spirits; and *natural magic*, the science of the occult; while *astrology* and *alchemy* were the advanced outcome of these superstitions. In more recent times there have been many professors of magical powers, but since the days of Cagliostro these things have been classed with charlatanism and legerdemain, and even the palmist finds himself under the ban of the law to-day.

Magic Lantern, an apparatus for throwing pictures or images on a screen, invented by Kircher in the 17th century, and consisting of a lantern, behind the light of which is a reflector, while in front is a tube carrying a condensing lens, this being supplemented by a double convex lens which enlarges the object to be shown. Many improvements in magic lanterns have been made in recent years, by which dissolving

views can be shown and photographs reproduced. The kine-matograph (otherwise cinematograph or bioscope) is perhaps the most marvellous use to which the magic lantern has been put.

Magilus, a gastropod which has a spiral shell when young, but gradually develops from the shell a tube of bent form with an opening at the bottom, older portions of the shell cavity becoming filled with a coral growth as the tube expands. Found on the coasts of the Red Sea, Java, and Mauritius.

Magistrate, a word describing a high executive officer, and of wide application. The first magistrate of a kingdom is the king, of a republic the president. In the more general meaning, a magistrate is a justice of the peace for a county or borough. Stipendiary magistrates exist in the various metropolitan districts and in the chief boroughs who are barristers of standing and devote their entire attention to the arduous duties of their position.

Magna Charta was sealed by King John at Runnymede on the 15th June, 1215, in obedience to the insistent demands of the barons, and has since been confirmed over 30 times by later monarchs. Its main provisions were that no free man should be imprisoned or proceeded against except by the judgment of his peers in accordance with the law of the land; that there should be one system of weight, and measure, throughout the kingdom; that foreign merchants should have freedom of commerce; that no scutage or aid should be imposed except by consent of the council; and that ancient liberties generally should be preserved. The original Charter is lost, but a manuscript copy exists at Lincoln.

Magna Græcia were independent States established by Greek colonists in South Italy between 704 and 774 B.C. They included Syracuse, Leontini, and Thurium. They allied themselves with Hannibal when he invaded Italy, and B.C., and his defeat involved their collapse as free States.

Magnesia came into use as a medicine early in the 18th century. It is the oxide of the metal magnesium, and is in the form of a white powder.

Magnesium, a metallic element first found at Magnesia in Asia Minor, and as a constituent of dolomite and other mineral substances has a very wide distribution. It is obtained by heating, and gives forth a brilliant white flame when heated to the proper point. The magnesium light is so rich in chemical rays that it is frequently used in photographing objects by night, or in caverns or other dark places where photography would otherwise be unpracticable. Magnesium lamps have been utilised for lighting up tunnels during construction.

Magnetism, the quality of attraction possessed by the lodestone or magnet-stone, was known to the ancient Greeks, Chinese, and Arabians. Roger Bacon knew of its attraction to the north, and it was this property that led to the invention of the magnetic needle, and of the mariner's compass.

Magnets are usually magnetised bars of steel. One of a single bar is called a simple magnet; several bars fastened together furnish a compound magnet. Electro magnets are wonderfully powerful, some being capable of sustaining weights of over a ton.

Magnificat, the hymn of the Virgin Mary, given in Luke i. 46, beginning in the Vulgate with the words "Magnificat anima mea Dominum" (My soul doth magnify the Lord), and used in the services of all Christian Churches.

Magnolia, the type of the botanical tribe *Magnoliceæ*, comprising many beautiful trees and shrubs with large and fragrant flowers, and chiefly native to North America and Asia.

Magpie, a well-known bird of the crow family, of glossy black and white plumage, famed for its mischievous propensities.

Magyars, the dominant Hungarian race, of the Mongolian stock, settled in Hungary from the 10th century.

Mahdi, an Arab leader of great influence, invested with powers akin to those of a Messiah in the Mahometan religion. Several individuals, claiming to be the Mahdi, have given trouble in the Sudan, but British military organisation has proved too much for them in the end.

Mahogany, a fine hard wood susceptible of a very high polish, and distinguished for the beauty of its colour and markings. The tree which produces this wood (the *Swietenia mahogany*) is a native of the West Indies and tropical America. Mahogany is said to have been first brought to England by Raleigh in 1595.

Mahomedanism, the religion set forth by Mahomet and embodied in the Koran (q.v.). Briefly, the doctrine includes the unity of God, the immortality of the soul, predestination, a last judgment, and a sensual paradise. The faithful are enjoined to practise circumcision, prayer, alms and fasting, great latitude being given, however, as to the marriage bond, polygamy and concubinage receiving sanction. There are over 150,000,000 Mahomedans in Europe, Asia and Africa.

Mahrattas, a warlike people strongly opposed to the East India Company in the 18th and early part of the 19th centuries, but finally subdued in 1818.

Maid of Honour.—Queen Victoria had eight Maids of Honour, who succeeded each other in pairs with unvarying regularity. Their duties were to read the newspapers aloud to the Queen, drive out of an afternoon, and play to her in the evenings. The salary attached to the office was £300 a year, of which was required for her toilet and for Her Majesty, although she encouraged simplicity of attire in her ladies, had a curious objection to their appearing often in the same dress. Each received a dowry of £1,000 on her marriage. The departing Maid also carried away her badge of office, a brooch consisting of a miniature of her Royal mistress set in diamonds. During the sixty-three years of Queen Victoria's reign only thirty-nine Maids of Honour were appointed. Of these, nineteen married while in office. Queen Alexandra was much less exacting than Queen Victoria was in regard to the attendance of Maids of Honour.

Malgre, a sea fish of the Scianidae genus, mostly inhabiting the Mediterranean, though occasionally met with in British waters. It is a large fish, and makes a buzzing sound as it swims.

Mail-Coaches, which are usually regarded as things of a very distant past, did not come into existence till 1784, when Mr. John Palmer, of Bath, put the first mail-coach on the road between Bath and Bristol. They were soon afterwards adopted in other parts of the kingdom, and were employed in carrying the mails, until superseded, in great part, by railways.

Maintenance, a legal term signifying the interference in a suit by some one having no direct interest in it, and constituting a punishable offence.

Malze, an important cereal largely grown in South-eastern Europe and America, commonly known as Indian corn in the latter country.

Majolica, a kind of pottery carrying a highly coloured glass or enamel, supposed to have been introduced into Europe by the Moors from Majorca in the 15th century, and brought to a high degree of artistic beauty in those days, Raphael and other great artists having made designs for the ware. After the 18th century majolica production practically ceased, though in recent times some clever imitations of the old ware have been manufactured.

Major, in the British Army, ranks next below a Lieutenant-Colonel. A Major-General ranks beneath a Lieutenant-General.

Malachite, a green variety of copper ore, abounding in Australia, Russia, and South America, and, in its finer examples, can be worked up as a gem.

Malays, a race of people with oblique eyes, high cheek bones, and brown skin, whose native countries are the Malay Archipelago, Polynesia, the Philippines, and Madagascar.

Malic Acid, a substance obtained from unripe fruit, and present in the largest quantities in rhubarb and mountain-ash berries; it is used with bases for producing the salts called *malates*.

Malmesbury derives its name from having been inhabited in the 17th century by the Norman brigand Odon, and afterwards, according to the tradition, by evil spirits, exorcised by the monks of St. Denis. Little was known of it, however, until its purchase,

for 160,000 fr., by the Empress Josephine, who died there in 1814 as the result of a chill caught while showing the Russian Emperor round the grounds. After the Second Restoration, Prince Eugene sold Malmesbury, removing its gallery of pictures to Munich. In later years it has for some time the residence of ex-Queen Christina of Spain. It is now converted into a museum.

Malmsey, a favourite wine originally made at the Greek port of Malvasia, but now made chiefly in Madeira, Sardinia, and Sicily.

Malt is barley grain which has gone through a steeping and preparing process to render it suitable for brewing purposes. It was for a couple of centuries subjected to a fluctuating duty, producing in 1853 a sum of £5,773,727. The tax was abolished in 1880.

Malta, Order of, was founded in the time of the Crusades, and the chief function of its members was to protect the Christians in the East against the Infidels. Their seat was originally at Jerusalem, whence they retired successively to Saint Jean D'Acre, to Rhodes, and to Cyprus, pursued everywhere by the rising tide of Mahomedanism. Finally they settled at Malta, which the Emperor, King Charles V., ceded to them; and there they continued for three centuries until Napoleon, on his way to Egypt, dispersed them. The Emperor Paul of Russia then protected them; but the office of Grand Master was in abeyance until 1870. The Austrian Baron Hardegg succeeded to that office in 1905.

Maltese Dog, one of the smallest of dogs, with long, silky white hair and pendulous ears; much appreciated as a drawing-room pet.

Manelukes were originally—in the 13th century—a bodyguard of Turkish and Circassian slaves in the service of the Sultan of Egypt, and attained such influence that in 1390 they were strong enough to appoint one of their own body to the throne of Egypt. After that a succession of Maneluke Sultans reigned down to 1517. Then the Turks annexed Egypt, and the Manelukes were taken into the service of the Boys. They again came to the front after Napoleon's conquest of Egypt, and for a time resumed governmental sway; but in 1817 they were decoyed into the citadel of Cairo and massacred by order of Mehemet Ali.

Mammalia, a zoological term covering all that portion of the animal kingdom the females of which are provided with mammary glands, for suckling their young. A further characteristic is the double articulation of the skull with the vertebral column.

Mammoth, an extinct species of elephant of gigantic size. In 1799 an entire skeleton of the animal was found in Siberia in a block of ice. It was evidently an inhabitant of Britain and other parts of Europe as well as of Asia and America.

Mammoth Cave of Kentucky, about 10 miles long, is one of a series of spacious caverns formed in the limestone rock formation, and is from 40 to 300 feet wide and at one point 300 feet high. Stalactites and stalagmites abound. See "Caves."

Mammoth Tree of California, the giant of the famous coniferous grove at Calaveras, 377 feet high by 90 feet in circumference, and believed to be from 3,000 to 4,000 years old.

Manatee, an aquatic mammal of the *Manatus* genus, averaging length, when full grown from 10 to 12 feet in length, with shovel-shaped tail, and four limbs and nails which almost give the appearance of arms and hands. In spite of their ungainly aspect, these creatures are believed to have given rise to the idea of mermaids in the olden time.

Manchus, the original nomadic race inhabiting Manchuria; of the Mongolian stock, and chiefly engaged in cattle rearing. The ruling family of China are of Manchurian descent.

Mandamus, a writ of command from a superior to an inferior court, enjoining the performance of a particular act.

Mandarin, the name given to a powerful Chinese official, civil or military, whose rank is shown by the wearing of a button. In Chinese the name is Kwan.

Mandible, the inferior maxilla (in the lower jaw) in human anatomy; the upper and lower rostra of the beak in birds; and the upper and outer pair of jaws in insects.

Mandilion, a form of upper garment worn by soldiers and servants in the 17th century, confined mostly to France.

Mandoline, an Italian fretted guitar, so called from its almost conformation.

Manes, the ancient Roman name for the shades of the dead, who were regarded as tutelary divinities, and worshipped.

Manganese, formerly included among the ores of iron. Its distinctive character was established in the 18th century. It is hard and brittle, and oxidises rapidly when exposed to the air. It is found in combination in many minerals. As a commercial product, in its numerous oxides, it is of great value.

Manicheans, a sect founded by the philosopher Manes in Persia about 201 A.D., and spreading into Egypt and Arabia. Manes called himself "the Envoy of Christ," rejecting the Old Testament, and propounding a system of his own based partly on Christianity and partly on the dogmas of the ancient fire-worshippers.

Manikin, a dwarf or pigmy; an artificial figure employed in anatomical demonstrations, made sometimes of papier-mâché.

Manna, a tree of the ash genus growing in the South of Europe and in the East, and exuding a sweet substance which is gathered by nitties, cleaned, boiled, and eaten.

Manors, which were established in Anglo-Saxon times, were estates originally granted as rewards for knight service, and included the privilege of a special court with jurisdiction, criminal and civil, within the lord's territory. In recent times the ancient privileges of the manorial system have almost passed out of existence. Such copyhold property as is yet unincorporated is generally set forth as being held by the tenant "at the will of the lord according to the custom of the manor."

Mansfield College, Oxford, for the education of students for the Nonconformist ministry, was established in 1846, and opened in 1849.

Mansion House, the official residence of the Lord Mayor of London, stands on the site of the ancient Stocks market, and was erected in 1739-53 from the designs of George Dance.

Manlaughter is the unlawful killing of another without malice or premeditation, and is classed as voluntary, as when done under a sudden provocation, or involuntary, when it is the result of some unlawful act. Culpable homicide also comes within the term of manslaughter.

Manures are natural or chemical substances put upon land in order to aid cultivation. Natural manures comprise what is generally known as farmyard manure, sewage, leaves, &c., and chemical manures include bones, nitrate of sodium, guano, soap, lime, and other kindred matters.

Manx, the original Celtic inhabitants of the Isle of Man, where a Celtic dialect still lingers.

Maoris, one of the native races of New Zealand, but not in the strict sense of the word Aborigines, having migrated to the island originally from one of the Polynesian group. They number about 50,000, and are adapting themselves with considerable success to the conditions of civilised life. Until 1870 they were frequently in arms against the Government, but since then have accepted their position with loyalty.

Maple, a tree that is native to the northern hemisphere, and has at least fifty species. The sycamore and plane tree are the best known British varieties. The sugar maple abounds in Canada and the eastern parts of the United States. The maple-leaf is the Canadian national emblem.

Marabouts, a class of Berbers adopting a religious life, and regarded with much reverence by the people of North Africa.

Maraschino, a liqueur distilled from cherries, and mainly produced in Dalmatia and Corsica.

Marble is limestone in its hardest and most crystalline form. There are many varieties—33 were used in the building of the Paris Opera House—but white is

the purest and rarest. From about 500 B.C., white marble was used by the Grecian sculptors for their statues. Rome was rich in marble buildings and monuments, and Palmyra was mainly built of white marble. Devonshire and Derbyshire yield the best English marbles, and several localities in Ireland furnish particular kinds. Vermont, Massachusetts, and Tennessee are the chief marble-producing States of America. The American marbles are mostly light grey. The Marble Arch, at the northern entrance to Hyde Park, was originally built for the front of Buckingham Palace.

March, the third month of the year, and the first of the old Roman calendar. It was named after the god Mars, and was the *Hyd (storm) month* of the Anglo-Saxons.

Marché Gras, the last day of the Carnival in France, Shrove Tuesday.

Margarine, a butter substitute made from beef suet, vegetable oils, butter and milk.

Mariner's Compass. (See **Magnetism**.)

Marines, soldiers for sea service, were established in 1661, when 1,200 men were enlisted as the first marine regiment. By 1741 there were 10 marine regiments, of 1,000 men each. Over 3,000 British marines were engaged in the French wars of the early part of the 19th century. The present strength of the Royal Marines is about 6,000.

Mariolatry, a term applied by non-Catholics to the honour or worship (hyperdulia) of the Virgin Mary, begun in the 4th century, and still a prominent part of Roman Catholic religious observances.

Marionettes are puppets moved by strings and made to go through a fantaisie performance. They originated in the *Fantaria* of the 15th century, which had such vogue in Italy, and are still popular, being adopted in Germany and England later. The famous *Punch and Judy* is a native version of the Italian *Pinocchio*.

Mark, a modern silver German coin, about equal in value to an English shilling, and in former times the name of a variety of coins, including the Scotch coin of Charles II's time, worth 13s. 4d.

Marl, a rock composed partly of clay and partly of carbonate of lime. The upper division of the kauper formation is known as the Red Marl series. Marl is used for building, mortars, cements, and brick-making.

Marlin-spike, a small iron instrument used in rope spinning for separating the strands.

Marmonet, a very small kind of monkey confined to the New World. Very squirrel-like in appearance, with long bushy tail and thick woolly fur, they are pretty little animals and the smallest of all monkeys.

Maronites, a sect founded by a monk named John Maro in the 7th century, in Syria, and still existing in the Lebanon region. They differ from the Roman Catholics (to whose church they are allied and report themselves) in certain points of doctrine concerning Christ. In 1826 they suffered severe persecution at the hands of the Druses, some 1,300 being massacred and 100,000 driven from their homes.

Maroons, the name applied to a body of fugitive slaves which in the 18th century took up arms against the whites of Jamaica. For eight years they kept up a troublesome warfare, but surrendered in 1730, being permitted to retain their free settlements. There are also maroons in Dutch Guiana.

Mar-Frelate Tracts, seditious pamphlets written with great malice against about 1860, and intended to discredit the episcopacy, caused a great sensation in their time, and led to the execution of their supposed author, John Penny.

Marquetry, a kind of inlaying in which thin layers of coloured woods are wrought into a design, and mainly used in ornamental floors.

Marquis, the title next in precedence below that of a duke. The first English marquis was Robert de Vere, Earl of Oxford, who had the honour conferred upon him by Richard II in 1385.

Mars, the planet lying next after the earth in the order of distance from the sun, Mercury being first and Venus second. It is the planet that has been most closely studied because of its comparative nearness. It has two satellites.

Marseillaise, the French national hymn, written and composed by Rouget de L'Isle, a French engineer officer, who was inspired to write it in 1792 to encourage the Strasburg conscripts. It immediately became popular, and received its name from the fact that it was sung by the Marseillaise troops while marching into Paris.

Marshalsea Prison, a once well-known house of detention in Southwark. It stood near St. George's Church, and was originally a prison for royal servants convicted of offences, but from 1849 was for many years a debtors' prison. The description of it in Dickens's *Little Dorrit* is now its chief claim to remembrance.

Marsh Tortoise, an amphibious animal of the order Chelonida, spread over many countries and inhabiting ponds and small rivers. There are 42 species, and they are all carnivorous.

Marton Moor, near York, was the scene of the famous battle between Prince Rupert and his forces against Cromwell and his troops on July 2nd, 1645, resulting in a complete victory for Cromwell.

Marsupialia, animals—mainly Australasian—having a marsupium or pouch; the young are born of comparatively small size and imperfectly developed, but are transferred to the maternal pouch, which is usually furnished with a long lacteal nipple.

Martello Towers, circular forts erected on the coasts of England early in the 19th century as defences against foreign attacks, but now abandoned as insufficient in the changed conditions of modern warfare. The derivation of the name is uncertain.

Marten, a carnivorous animal of the weasel family, a variety of which was once common in Britain, but now seldom met with. It feeds on birds and small mammals, and is clothed with a handsome dark brown fur which is much valued.

Martial Law, which is sometimes instituted in a time of outbreak or rebellion, is often confounded with military law. The Duke of Wellington said that "martial law means no law at all, but the will of the general till the ordinary law can be either established or restored." Sir David Dundas described it as "the substitute for a civil jurisdiction for the moment during which the functions of the latter are paralysed." The district in which martial law is proclaimed comes entirely under the control of the military power both in civil and criminal matters.

Martin, a well-known bird-visitor to Britain. It belongs to the swallow family, and the two species that spend their summer here are the house-martin, which makes its nest of mud under the eaves of houses, and the sand-martin, which builds in sandy banks.

Martingale, a long strap or thong of leather, one end of which is fastened to the girth of a horse, between the fore legs, and the other to the bit, or to a thin mouthpiece of its own.

Martmas, or St. Martin's Day, falls on November 11th, and is one of the Scottish quarter days. St. Martin was a popular Saint with our ancestors, and Martmas was a busy time for the Mediaeval housewife. It was the date when "Martmas Beef" was dried in the chimney, and enough bacon and mutton cured to last until the spring, because, owing to the scarcity of winter fodder, fresh meat could seldom be obtained. This diet of dried meat without vegetables caused scurvy, King's evil, leprosy, and other unpleasant maladies. Originally the goose belonged to Martmas, not to Michaelmas, the legend being that when Martin was elected Bishop of Tours he hid himself, but was betrayed by the cackling of geese. He died in the 4th century.

Martyrs, in the Christian Church have been many. Stephen was the first Christian martyr in 30. The first English martyr was St. Alban, 286, and in Tudor times very many eminent churchmen went to the stake at West Smithfield, in London, and at Oxford, where now exists the "Martyrs' Memorial." There is also a Martyrs' Memorial Church in St. John St. Clerkenwell, but far away from the scene of the Smithfield fires.

Mason and Dixon's Line is the boundary line separating the old Slave States of America from the

Free State of Pennsylvania. It was drawn by two English surveyors, Charles Mason and Jeremiah Dixon, between 1763 and 1767.

Maquerades are balls or dances at which those who take part appear masked or in character. They were in vogue in the 17th century, and attained their height during the reign of Charles II. In 1724 they were abolished, but not for long, being renewed towards the end of the century at the various public gardens, with increased show, becoming again very fashionable. They have had a more continued popularity in France and Italy. Fancy dress balls have in recent years been given at the present Royal Opera, Covent Garden. The former building on this site was burned down after a masked ball given on March 5, 1866.

Maques were light dramatic compositions set to music and performed on special occasions. One of the best known examples is Milton's "Comus," which was given at Ludlow Castle in 1634.

Mass, the portion of service in the Roman Church consisting of the consecration and elevation of the Host. It is high or low, i.e., performed with full choral service, or merely by the rehearsal of prayers without singing. Mass was first celebrated in Latin in the 4th century, and was introduced into England in the 7th century.

Massorah, a collection of criticisms on the Hebrew text of the Scriptures, and rules for its correct interpretation.

Mast, a tall, round piece of timber, steel or iron, elevated vertically from the keel of a ship, and to which are attached the various parts constituting the rigging. The lower part of a mast, however, in the case of the larger ships, is only called the mast, the next higher section being the top-mast, while above that come the top-gallant-mast and the royal mast. There are also fore-masts, mizzen masts, and try-sail or spanker-masts, and jigger-masts.

Master of the Revels, was an important court officer in ancient times, for upon him devolved the arrangement of Court festivities. The last man to fill the office in England was Solomon Dayrolle.

Master of the Rolls, one of the English judges, formerly a judge of chancery, but since 1881 a judge of the Court of Appeal only. In addition to his judgeship he is the nominal custodian of the rolls or records preserved in the Record Office.

Mastic, a resinous substance obtained principally from the bark of a tree which flourishes in the Greek Archipelago, *Pistacia lentiscus*, and is mainly used in the manufacture of varnish.

Mastiff, a domestic dog said to be an original British breed. It is a large massive animal with pendulous ears, and makes a capital watch dog.

Mastodon, an extinct order of quadruped closely resembling the elephant in structure, but much larger. Their remains have been found mostly in America.

Matohes. (See **Lucifer Watches**.)

Materialism, the doctrine that man's soul is not a spiritual substance, but results from the organisation of matter in the body. To the materialist everything that exists is either matter or energy.

Materia Medica treats upon the different substances used in the practice of medicine, giving details of their constituents and effect.

Mathematics is the science of computation and measurement, and is defined as "pure" when treating of quantity in the abstract, and "mixed" when dealing with material bodies and facts.

Matins, an early morning church service. The service includes, in the Roman communion, the Lord's Prayer, the Angelic Salutation, the Creed, and certain Psalms. The name was also given to the early morning massacres (a) of St. Bartholomew, August 24th, 1572, called the "French Matins," and (b) the massacre of Prince Demetrius and his Polish adherents, May 27th, 1606, the "Matins of Moscow."

Matrilineage, an ancient theory that the mother was the source of authority and not the father, and that in the "golden age" women exercised supreme control.

Maundy Thursday, the day before Good Friday.

was, in olden times, a day of almsgiving, upon which the sovereigns of England, through their almoners, gave money, food, and clothing to as many poor persons as the kings were years old. The custom is still observed with some ceremony.

Mausoleum, a special place of sepulture, generally for the reception of the remains of members of a royal or other family of distinction. The name is derived from the tomb of King Mausolus at Halicarnassus, erected about 350 B.C., and forming one of the seven wonders of the world. The royal mausoleum at Frogmore was founded by Queen Victoria, and bore her late Majesty, Prince Albert, and others of the present royal house are buried.

Mauve, a colouring matter produced from lichens by Dr. Stenhouse in 1856, but in 1856 obtained from aniline by Perkins, and forming the first of the aniline dyes to be prepared on a large scale. The term *mauve*, however, was used to designate a purple shade of colour in the thirteenth century in France.

May, the fifth month of the year, but the third of the ancient Roman calendar. Supposed to be named after Maia the Mother of Mercury, to whom sacrifices were offered on the first of this month. In England in former days May Day was made the occasion of many festivities, including the crowning of the May Queen, dancing round the Maypole, &c.

May Flower, the name of the ship which in 1565 conveyed the Pilgrim Fathers, 102 in number, from England to America.

Maynooth College, near Dublin, was founded by Parliament in 1795, and possesses a large permanent endowment. It accommodates 500 students, who are trained for the Roman Catholic priesthood.

Mayors were appointed by Henry II. The first Mayor of London was Henry Fitz-lwyn, who was appointed in 1189 and held the office for 24 years. In those days the Mayors were chosen for life. In recent times, however, the Mayor is the Chief Officer of a Municipal Council, and is elected annually either from the members of the Council or from outside. The chief Magistrates of London and York have long been dignified by the title of Lord Mayor, a distinction which has of late years been extended to several other great English cities including Birmingham, Sheffield, Leeds, Bradford, Bristol, Cardiff, Liverpool, Manchester, Norwich, and Newcastle-upon-Tyne. In Scotland the chief magistrates are Provosts.

Mayors of the Palace, were functionaries of great influence under the later Merovingian kings; indeed, they exercised so much power that they may be said to have ruled while the kings themselves were mere puppets.

Mazarine Bible, an edition of the Latin Vulgate discovered in the library of Cardinal Mazarin: from which Gutenberg between 1450 and 1455 printed the first book for which cut metal types were used.

Mazdaism, pertaining to the religion of the ancient Persians, another name for Zoroastrianism.

Meal Tub Plot was a pretended conspiracy in 1679 against the Duke of York, afterwards James II., concocted by an informer named Dangerfield who sought to incriminate the Earls of Halifax, Essex and Shaftesbury. Evidence of the fictitious nature of the plot was subsequently discovered in a meal-tub belonging to a woman with whom he had lived, and he was publicly whipped and put in the pillory. A man named Francis struck him a blow which caused his death, for which the assassin was hanged.

Meal-Worm is the larva of a beetle—the *Tenebrio molitor*—and is found in corn mills, granaries and bakeries, where it does considerable damage.

Measurements of Celestial Bodies.—The accurate measurement of the distances and sizes of all the heavenly bodies depends on the measurement of the sun's distance from the earth, and observations on certain of the minor planets afford the surest means yet obtained for calculating this unit. Eros, a minor planet discovered in 1868, under certain conditions is nearer the earth than any other heavenly body, the moon excepted; and at its opposition, in 1900, observations were made to ascertain its parallax at forty observatories all over the world. Since then the work of measuring the many photographs taken

and reducing and comparing the results of the observations have occupied the astronomers concerned, and the Paris Observatory has issued a bulky volume of 400 pages giving some of the results. When all are published, some devoted mathematician will have to deduce from them the final result. The results so far are almost in complete accordance with the present accepted mean distance of the sun, 92,900,000 miles.

Mechanics, the general name for the science which includes Kinematics and Dynamics, and deals with force and its influence upon matter.

Mechanics' Institutes for providing education, libraries, reading rooms, lectures, &c., for the working classes were founded by Dr. Birkbeck in London in 1823, the Birkbeck Institute still remaining to commemorate the foundation. Similar institutions were formed in all parts of the country, and have achieved, and are still achieving, a great work in the education of the people. In the manufacturing districts of the north, the west, and the Midlands, Mechanics' Institutes during the Victorian reign accomplished incalculable good.

Medals, as decorations for military service, were first issued in this country by Charles I., who ordered medals for gallantry to be distributed to certain soldiers in 1643. Medals were also issued to officers and men who were victorious against the Dutch fleet in 1653. After Lord Howe's victory in 1794 a Naval medal was instituted. Medals were also struck for the victory of Waterloo, and since that time special medals have been issued in connection with all our wars. The Victoria Cross, a special reward for personal gallantry in the Army and Navy, was instituted in 1856.

Mearschaum, a white or yellow-white earthy mineral, found in beds in Asia Minor, Greece, and other places, is a silicate of magnesium allied with water. Its chief use is in making pipe-bowls, though in Spain it is used for building purposes.

Megalothys, an extinct fish, fossil remains of which have been found in the Devonian and Carboniferous formations.

Megalosaurus, an extinct reptile of enormous proportions, having a length of from 30 to 40 feet. Fossil remains of this monster have been found in Oolitic Slate and Weald Clay.

Megaphone, a conical tube for propelling the sound of the voice to a distance.

Megatherium, an extinct animal of the sloth order which attained a height of 5 feet, and measured 18 feet in length, including the tail. The post-Tertiary deposits of South America have yielded several specimens of this animal.

Mellite, a crystalline solid explosive of tremendous power, whose chief ingredient is picric acid.

Melon, a well-known tropical fruit, of which there are numerous varieties, nearly all being used as food.

Mendicant Friars, certain religious orders which spread over Europe in the 13th century, and comprised the Franciscans, Dominicans, Augustines and Carmelites. Originally they depended entirely on alms.

Mendicity Society, established in London in 1828 for the suppression of systematic begging. It has done much to protect the public against impostors.

Mennonites, so called from having adopted the doctrines of Menno Simons, a priest of the 16th century, who led the Baptists, not Anabaptists. There are several communities still existing.

Mercator's Projection, a method of indicating meridians of parallels of latitudes on maps, introduced by Mercator in the 16th century, and still universally used in navigators' charts.

Mercers' Company, the wealthiest and one of the oldest of the London Livery Companies, with a present income of £117,000.

Merchant Adventurers' Company, first established in England in 1406 by Henry IV., and specially chartered by Edward III. It continued trading, and did much colonising down to the time of Charles I.

Merolless Parliament, the name given to the parliament of 1588 summoned by Richard II., which decreed the execution of several of the king's ministers and the outlawry of the Duke of Suffolk.

Mercury, one of the smaller planets and the nearest to the sun, though 355 million miles distant. It has no satellite. The transit of the planet over the sun's disc occurs only at wide intervals. The last time was in 1858.

Mercury, or Quicksilver, is one of the oldest known metals, whose chief use is the sulphide cinnabar, found in certain parts of Spain, China, Japan, Mexico, and South America. It is the only metal which is liquid at ordinary temperature, and does not alter by exposure to air when pure. It is largely used in the construction of barometers and thermometers, and is an adaptable alloy. It is also of great value in medicine.

Meridian, an imaginary circle extending through the North and South Poles and any given place. When the sun is at its mid-day height at any place it is on the meridian; hence the terms ante-meridian (a.m.) and post-meridian (p.m.).

Merino Sheep were imported into England from Spain in 1788, and had great influence in improving native breeds, especially in regard to the quality of the wool. It has been supposed that these sheep were descended from the English sheep sent to Spain in 1390 as part of the dowry of John of Gaunt's daughter Katherine, but this statement is of more than doubtful authenticity.

Met. Order of, constituted 26th June, 1902, for persons signally distinguished in the service of the State. The original members included Lord Roberts, Lord Wolseley, Lord Kitchener, Lord Fisher, Lord Rayleigh, Lord Kelvin, Lord Ister, Sir William Puggins, Lord Morley, Sir Lawrence Alma-Tadema, Mr. G. F. Watts, Mr. Holman Hunt, Earl Cromer, and Mr. George Meredith. Among the more recent additions to this roll of honour are the names of Thomas Hardy, Sir Edward Elgar, Viscount Bryce, Sir G. Otto Trevelyan, Hart, Sir Joseph J. Thomson, Professor Henry Jackson, and Sir William Crookes. The three eminent Japanese, Marquis Yamagata, Marquis Oyama, and Admiral Togo, also had this special honour conferred upon them.

Merlin, a bird of the falcon family, and the smallest of the hawk species. It is not infrequent on British grouse-moors, and in the hawking days of the old time was the bird most favoured by the ladies.

Mermals, the reputed woman-fish of the ancients, and doubtless originating in the manatee occasionally sent by sailors. The manatee suckles its young.

Merovingians, the first race of French Kings, beginning with Clovis, 467, and ending with Chilperic, 753.

Merry-Andrew, the name given to performing clowns in olden times, derived from Andrew Borde, a facetious physician of the reign of Henry VIII.

Mesmerism, the so-called science of animal magnetism first introduced by Dr. Mesmer, in 1766, but since exposed as a fallacy. See **Hypnotism**.

Messageries Maritimes, the principal French steamship company, whose chief port is Marseilles. Trades mainly with South America and the East.

Messuage, the old legal term for a dwelling-house and its immediate out-buildings and adjoining land.

Metallurgy, the science of obtaining metals from their ores and applying them to the uses of man. (See the different Metals.)

Metamorphic Rocks, are such geological deposits as have undergone alterations of structure and composition which serve to place them apart from what must have been their original stratification. The most active agents in producing these metamorphic changes are heat, water, and pressure.

Metaphor, an analogous substitution of word or meaning for poetic effect, differing from a simile in that it is a figurative expression and not one of mere similarity.

Metaphysics, Aristotle's term for defining the philosophy of supernatural science.

Metayer System, a land cultivation method prevalent in Italy and France, whereby the landlord provides the land and materials and the tenant the labour, the produce being evenly divided between them.

Metempsychosis, the Pythagorean theory of the transmigration of the soul from one body to another.

Meteorites are solid bodies, or metallic masses which fall from the sky to the earth. Iron is the preponderant element, in association with nickel. Meteoric stones, in addition to iron, contain siliceous substances, as well as gaseous mixtures. At L'Algie, France, in 1803 from 1,000 to 2,000 meteoric stones fell; the largest meteoric stone actually known to have fallen to earth is one which descended in Emmott county, Iowa, in 1879, weighing 437 pounds.

Meteorology, the science which treats of the various atmospheric phenomena included in the term weather, and studied with highly beneficial results in recent times. The Meteorological Department of the Board of Trade was started in 1855. The system of storm-warnings was established in 1861. Weather bureaux are in operation in many chief cities, and at prominent points of observation, all over the world, and weather forecasts form a portion of every day's newspaper intelligence.

Meteors are luminous bodies moving through celestial space, such as shooting stars.

Meter, an instrument or apparatus for measuring anything, as gas or water.

Methodists, a term designating the religious organisation founded by John Wesley in 1739, after a long course of successful preaching by him in all parts of the kingdom, as well as in America. Wesley had said of him that his genius for government was not inferior to that of Richelieu, and the constitution of the Wesleyan Methodists, as their founder formulated it, showed a remarkable genius for administration. Wesley's two leading doctrines were those of instantaneousness of conversion and Christian perfection, or deliverance from sin. The itinerant system of the Conference is a prominent feature of his organisation. There are in the United Kingdom alone between 2,000 and 3,000 Wesleyan Methodist ministers, about 30,000 lay preachers, 500,000 church members, over a million Sunday school teachers and scholars, and from 8,000 to 9,000 chapels. Among the other Methodist organisations, offshoots of the Wesleyans, there are the Methodist New Connexion, the United Methodist Free Church, and the Primitive Methodists. In the United States the Methodists have a membership of over three millions, and throughout the world 18 million persons receive Methodist instruction. The Wesleyans raise nearly £200,000 a year for their extensive missionary operations, and in 1907 the body got together a Twentieth Century Fund of one million guineas for evangelistic, educational, and philanthropic work. The Wesleyan Central Hall at Westminster was opened in Oct. 1912.

Methuen Treaty, a treaty of commerce between Great Britain and Portugal, concluded by Paul Methuen, the British Ambassador at Lisbon, in 1903. It provided for the importation of port wine at reduced rates, and led to the popularising of the beverage in this country.

Methyl, a colourless and odourless gas; a compound of hydrogen and carbon, obtained in the free state by the chemists Frankin and Kolbe, independently of each other, in 1849.

Methylated Spirit, a combination of pure alcohol with 10 per cent. of pure wood spirit, largely used as a solvent, and obtaining its name from methyl-alcohol, which is the chief element of wood spirit.

Metre, the standard French measure of length, equivalent to 39.37043 English inches, and computed to represent two-thirtieth part of the distance from the equator to the North Pole.

Metric System is the decimal method of calculation. It came into force in France in 1793, and has since been adopted in most of the continental countries and by the United States and Canada. There have been many attempts to get the system adopted in this country, but without success. (See **Metric and English Measures in Office Compendium Section**.)

Microchrome, an instrument for the measurement of colour, consisting of three hollow wedges of glass of identical capacity and shape, and so arranged between two screens that any portion of their tapering sides may be presented at will to an aperture through which a ray of light may be thrown.

- Metronome**, an instrument for beating time during the performance of a musical composition. It comprises a double pendulum, and may be wound up like a clock.
- Metropolitan Water Board**, a body constituted by special Act in 1902, consisting of 66 members, and controlling the water supply of London. £4,000,000 was paid as compensation to the water companies absorbed.
- Metz, Siege of**, lasted from August 8th to October 27th, 1870, when Marshal Bazaine surrendered to the Germans, his army consisting of 173,000 men, 400 pieces of artillery, and over 6,000 officers. Bazaine was tried and condemned to death for this surrender in 1874, a sentence which was commuted to 20 years' imprisonment, but subsequently he escaped.
- Messing**
- Messing**, an engraving from copper or steel produced by instruments which burish and scrape away portions of the surface, and yield an impression effectually graded in light and shade.
- Mica**, a nearly transparent mineral, which has great heat-resisting power, and can be split into thin plates.
- Michael, St., and George, St.**, an order of knighthood originally founded for the Ionian Isles and Malta in 1818, and reorganised in 1869, so as to admit Crown servants connected with the Colonies. The Earl of Derby, Earl Russell, and Earl Grey were the first of the new knights.
- Michaelmas Day**, the festival day of St. Michael and All Angels, September 29, one of the English quarter days.
- Microbe**, a term proposed by Sédillot in 1878 (and since very generally adopted) to denote any minute organism, vegetable or animal, or found on the borderland between the two great natural kingdoms.
- Microscope**, an instrument for measuring minute distances. It is usually attached to the eye-pieces of a microscope or telescope, and consists of two very fine hair or wires stretched across the field of view, one fixed the other moveable. It was invented by William Gascoigne in the 17th century and was greatly improved by later inventors. Sir Joseph Whitworth made one in 1851 to measure the millionth of an inch.
- Microphone**, an instrument invented by Prof. Hughes, in 1878, for giving audibility to sounds which are otherwise imperceptible to the ear. By this apparatus, which establishes an electric current between two sensitised conducting bodies, and aided by the telephone, the sound of the tread of a fly may be magnified to seem as loud as the tramp of a horse.
- Microscope**, invented about 1590 by Jansen, and improved by Galileo, Fontana, and others, is an instrument which by a combination of lenses magnifies minute objects, making visible animalcule and other living substances which cannot be seen by the naked eye. Microscopes are simple, compound, and binocular. The more powerful instruments have a magnifying capacity of as much as 10,000 diameters.
- Middle Ages**, a period of about 1,000 years, during which Europe was under the grasp of feudalism. Italian reckoning takes the period from the invasion of France by Clovis in 486 to 1495 when Charles VIII. occupied Naples.
- Midge**, the common name of a small two-winged fly or gnat (*Culex pipiens*), clouds of which appear on summer nights in country places.
- Midrash**, the explanation of the Jewish Scriptures, dating from the time of the destruction of the 2nd Temple after the Captivity and continued by later Rabbis.
- Midshipman**, junior officers in the Royal Navy, who must have been through four years' training at the Royal Naval College, and have passed a certain examination. After three years' service as midshipmen they are promoted to the rank of sub-lieutenant if their examinations are satisfactory.
- Mikado**, the hereditary male ruler of Japan. Since 1868 the real sovereign of the country; previously, the Mikado was only the nominal spiritual head, the Tycoon (or Shogun) possessing the governing responsibility.
- Milan Decree**, the proclamation issued by Napoleon in 1807 from Milan, prohibiting continental nations from trading with England.
- Milky Way (Galaxy)**, the name of a long track of small stars which almost encircles the heavens. The ancients regarded it as a luminous streak, and the name commemorates the mythological legend that Juno when suckling Mercury or Hercules scattered milk across the sky.
- Millenarians**, a sect that interprets the Millennium period referred to in Revelations as beginning from the close of the seven thousandth year from the Creation.
- Millenary Petition**, was presented to James I. in 1603 on behalf of nearly 1,000 Puritan Ministers against certain of the rites and ceremonies of the Church of England. The Hampton Court Conference was the outcome of this petition.
- Miller's Thumb**, a small fresh-water fish deriving its name from its supposed similarity of head to the thumb of a miller, which assumes a compressed shape by frequent sampling of meal. The fish is the Eagle-ray, *Milobatis aquila*.
- Millat**, a nutritious cereal cultivated in nearly all warm climates; native to the East Indies.
- Millimetre**, a French linear measure, equivalent to a thousandth of a metre, or 0.00097 of an English inch.
- Millstone-grit**, a bed of rock of the Carboniferous group underlying the Coal-measures, and attaining in England a thickness in parts of 5,000 feet. It is from this rock that millstones have been made from time immemorial.
- Mineralogy**, a scientific term designating the power of many forms of animal and insect life, so to adapt themselves in colour and shape to their surroundings as to escape detection by their enemies.
- Mineralogy**, the science of minerals. The British Mineralogical Society was established in 1800.
- Minie Rifle**, invented by Capt. Minie, a Frenchman, in 1833, and for a time considered to be the best rifle in Europe. It was adopted by the French, and in a modified form by the British in 1851, but has long been superseded.
- Minim**, a musical term denoting a note equal to two crotchets, or half the value of the semi-breve.
- Minimisers**, the name applied to certain writers who, in the latter half of the 19th century, advocated the limitation of life and property. The writers included John Stuart Mill, Herbert Spencer, and W. von Humboldt.
- Minnesingers** were minstrel poets of Germany who, during the 12th and 13th centuries, composed and sang love ballads to amuse the knights and barons of the time. They were mostly of gentle birth. A collection of their songs was compiled in the 14th century, after the rise of their successors, the Meistersingers.
- Minnow**, a small fresh-water fish of the carp family abounding in all the waters of Europe; it has a mottled back and silvery belly, and forms a popular bait for trout.
- Minor**, a musical term referring to intervals and scales; thus, a minor interval is a semi-tone less than the corresponding major interval.
- Minstrels** were originally specially appointed instrumentalists and singers—pipers, harpers, and gleemen—engaged by barons and manorial lords to amuse their tenants. John of Gaunt had a court of minstrels at Tutbury in 1381. Later, minstrels assumed nonadamic habits, made their way into the houses of the great, and were generally welcome. By Elizabeth's time, however, they were too thick on the ground, and were classed as "rogues and vagabonds," along with actors.
- Miracle Plays** were a rude kind of sacred drama constructed by the monks in feudal times, and mostly representing certain miraculous incidents of the Bible.
- Mirage**, an optical illusion often observed in desert regions when the objects on the surface of the earth appear as if reflected in a surface of water. Mirage is due to the unequal heating of the different parts of the atmosphere, which bends the light rays, and so produces distorted images.
- Mirrors** were made of burnished metal in ancient times, brass usually. Silver mirrors were introduced by Praxiteles, 368 B.C. The Venetians made the first mirrors of glass, in the 14th century, but they were not made in England until the 17th century.

Mishna, the first part of the Talmud, setting forth the "Oral Law" of the Jews.

Misprision, a legal term, signifying an offence which may border on a capital charge. Misprision of treason indicates a knowledge of treason without participation in the treasonable act.

Missal, the name of the mass-book of the Roman Church compiled 492-6 by Pope Gelasius I., and revised by Gregory I., 590-604. The present Roman Missal was sanctioned by the Council of Trent 1545-63. In the Anglican Church the Book of Common Prayer superseded the Missal in 1549.

Missal-Thrush receives its name from its partiality to the mistletoe-berry. A common bird in England and larger than the song-thrush.

Mistletoe, a parasitic plant found growing on many trees, particularly the apple-tree. The Druids made it an object of reverence, and it is especially associated with Christmas as a decoration.

Mistral, a cold, dry wind peculiar to the French coast of the Mediterranean.

Mitrailleuse, a breech-loading machine gun adopted by the French army previous to the Franco-German war of 1870.

Mitre, an ecclesiastical head-covering worn by the twelve high prelates adopted by the Christian Church and worn by Cardinals (before 1245) and also by Bishops, etc. The Bishops of the Church of England wore mitres down to the reign of George III. The Council of Lyons enjoined the wearing of the "Red Hat" upon Cardinals from the middle of the 13th century.

Mnemonics, a method of developing the memory, which has been practised more or less since 477 B.C., when Simonides the younger invented the first known system. Among the more eminent professors of this art may be mentioned Peisaghe, Aime Paris, Willis, and Grey. Numerous teachers of the art advertise their systems at the present time.

Moa, a now extinct genus of birds of the ostrich family, wingless and standing 12 to 14 feet high, natives of New Zealand and Australia.

Moabites, a race of Judaea, descendants of Lot. They were often in conflict with the Israelites, but were finally subdued by Jehoshaphat, 853 B.C.

Moabite Stone, a stone of the 9th century B.C. containing the earliest known inscription in Phœnician characters and discovered in the land of Moab in 1868. Important as confirmatory evidence of the Moabite being mentioned in the Old Testament.

Mocking Bird, an American bird of the thrush family, widely distributed over the north and south of the Western Hemisphere. Its gift of imitation is wonderful—a gift which is exercised chiefly in imitating the voices and cries of animals.

Modoc Indians were a warlike tribe occupying American lands south of Oregon. They were allotted other lands by the United States Government, but being dissatisfied with their new quarters, returned to Oregon and defied the troops sent to expel them. Severe fighting followed, but after a few months the Modocs surrendered in 1873.

Moguls. (See **Mongols**.)

Mohair is the wool of the Angora goat and used very largely in the worsted trade for the manufacture of dress fabrics.

Mohocks, a lawless band which infested London in the early part of the 18th century, committing many outrages upon men and women under cover of the night. The word is a corruption of Mohawk, the name of a tribe of Red Indians.

Moiré, or watered silk, so-called because of the finishing process it undergoes, the "water" marks being produced by wetting and extreme pressing.

Molasses, sugar-cane juice in its uncrystallised form after boiling. The crystallised part is the raw sugar.

Mole, a small burrowing animal about the size of a small rat, with short legs and fore feet armed with strong claws for digging in the earth. Their subterranean dwellings are of curious and ingenious construction, and they do not often leave them except to make raids on mice, frogs, snails, &c. The earth-worm, however, is the mole's chief item of food.

Molecule, the minutest particle into which any substance can be subdivided. There are millions of molecules in a cubic inch of gas.

Mollusca designates the soft-bodied invertebrate animals, most of which are protected by a shell. These shells are univalve—that is, of one piece—as in the case of snails; bivalve as the oyster; or multivalve, though this kind is seldom met with. The shell is wanting in some classes of mollusca, such as the polyzoa.

"Molly Maguires", the name of a secret society organised in Ireland in 1843 for revolutionary purposes; also of an American association formed in Pennsylvania about 1876 against mine-owners and their agents. The members of these bands were women's clothes.

Molybdenum, a metal found in combination with sulphur, and forming an acid which combines with metals producing salts called molybdates. It is found in granite and is very similar to graphite in appearance though totally different in its properties.

Mongols were in ancient times known as Scythians. They were a nomadic race until about the 13th century, when they conquered large portions of Asia, including China, Persia, and India. They founded the Mogul dynasty in India in 1526, and ruled up to the end of the 18th century, when their empire came under British control.

Mongoose, an Indian species of ichneumon, feeding on vermin and reptiles, and a deadly foe to the snake.

Monitor, a genus of water-lizards noted for their great size, their long beards, long tails, and scaly covering. They are supposed to signal the approach of the crocodile to their neighbours by a curious hissing sound. There are 18 species, inhabiting Southern Asia, Australia, New Guinea, and Africa.

Monkey, a quadrumanous mammal of the order Primates, and including all members of that order excepting man and the lemurs. Monkeys with short tails are usually called apes; those with long dog-like faces baboons, small bushy-tailed monkeys marmosets. (See the various class names.)

Monmouth's Rebellion was headed by James, Duke of Monmouth, a natural son of Charles II. (b. 1650, d. 1685). He was sent to Scotland to quell the Covenanters in 1679, and succeeded in winning the Battle of Bothwell Bridge; but was banished for aspiring to the throne to the exclusion of the Duke of York, afterwards James II. In 1685 he landed at Lyme Regis, and assumed the title of King, but was defeated at Sedgemoor, and executed on Tower Hill. Judge Jeffreys stamped out the remnant of the Rebellion in the "Bloody Assize."

Monolith, a column or shaft comprising a single stone. "Cleopatra's Needle," now on the Thames Embankment in London, is an example.

Monophysites, an ancient sect who held that Christ was of one nature only, a blending of the divine and human.

Monism, the doctrine that there exists but one God. The chief monothestic religion is Christianity.

Monotremata, the name of the order or sub-class of mammalia comprising the duck-billed animals, of which only three species exist, restricted to Australasia. The Echidna, or Porcupine Ant-eater, belongs to the order.

Monroe Doctrine refers to a formal declaration made by President James Monroe that no European Power should be permitted to interfere with the concerns of government of any of the Independent States of North or South America. It also set forth that the American States would not interfere in European affairs.

Monsoons are certain winds which at regular seasons sweep over warm latitudes, especially India, where they prevail more or less from April to October.

Monstrance, an ornamental receptacle in which sacred relics of the Roman Catholic Church are held up for inspection.

Montanism, a sect founded in the 2nd century by Montanus, who expounded the doctrine of the continuation of the miraculous influence of the Holy Spirit. They are also called Phrygians, because of their leader being a Phrygian.

Month, the 12th part of the calendar year. A lunar month is the period of one revolution of the moon; mean length, 29 days, 12 hours, 44 minutes, 57 seconds. A sidereal month represents the time of the moon's revolution from a given star back to the same again, 29 days, 7 hours, 43 minutes, 12 seconds. A solar month covers the time the sun passes through one sign of the Zodiac, 30 days, 20 hours, 59 minutes, 41 seconds.

Monton, a heap of ore, varying in quantity in different mining districts, but representing technically a batch under amalgamation.

Monte-de-Piété, Government institutions for advancing money for goods left in pledge, were first established in Italy in 1462. Similar institutions in France in 1777 were suppressed by the Revolution, but restored by Napoleon, and have since been expressly regulated by law.

Monument of London, erected in 1671-7 by Wren in commemoration of the Great Fire, is 200 feet high, and cost £14,500. The original inscription upon it ascribed the fire to "the treachery and malice of the popish faction," which stood down to 1831, when the words were erased as objectionable. The black marble staircase consists of 345 steps.

Moon, the earth's satellite, is distant from us about 238,000 miles. It is a globe, 2,160 miles in diameter, and the period from one full moon to another is 29 days, 12 hours, and 44 minutes.

Moor-hen, a bird of the crane family familiar on the borders of British ponds, rivers, and lakes. It is of dark grey plumage, with olive-brown wings edged with white.

Moors, the name applied in modern times to the natives of Morocco. They were as a race at one time very powerful, and from 1237 to 1492 held possession of the kingdom of Granada. They were expelled from Spain in the 17th century and established themselves in Northern Africa.

Moose. (See Elk.)

Moplahs, a race of Mahomedan fanatics, settled principally in Malabar, and descended from Arabs. They showed for a time a rebellious spirit against the British, and were guilty of serious outbreaks. They were, however, subdued in 1873, since which time they have given no further trouble.

Moravians, a sect that sprang from the Hussites of the 15th century. In 1722 they had a community of 500 persons, settled on the estate of Count Zinzendorf. The Count was a zealous preacher, and established Moravianism in England in 1738. The Moravians have at present a membership of about 220,000 on the Continent of Europe, and own some 60 chapels and preaching places in England, with about 3,000 church members in all. They have been specially successful in mission work, and have considerable settlements in America.

Mordants are substances used for making colouring matters "bite" or adhere firmly to articles they are dyed. They are mostly of a metallic nature, and combine with the dye-liquid in which the fabrics are dipped. In addition to the metallic mordants there are some vegetable mordants, the chief of which are argol, sumac, nut-galls, etc., but these are not regarded as true mordants.

Morganatic Marriages are unions between males of royal or noble rank with women of inferior rank. In such marriages the left hand is given instead of the right, and it is stipulated that the children of the marriage are not to enjoy the rank or inherit the possessions of the husband, though such children are legitimate. Many morganatic marriages have occurred in our own royal family.

Morgue, a repository for dead bodies awaiting identification, the best known morgue being that of Paris which until recently was open to the general public. Others exist in the chief French towns.

Mormons, or Latter Day Saints, a religious sect founded by Joseph Smith, who, in 1827, gave it forth that he had discovered the *Book of Mormon* written on gold plates in Egyptian characters. This book, it afterwards was discovered, was written as a religious romance by a clergyman. A pretended English translation was published in America in

1830, and in England in 1841. Smith made it serve as the foundation of his new faith, and he began to preach Mormonism and to organise churches. He was shot in an attack by the mob at Nauvoo, in Illinois, in 1844, when Brigham Young was chosen prophet in his place. The Mormons settled at Great Salt Lake in 1847, and from that time considerable success attended their settlement, their material prosperity bringing in fresh converts.

Morning Post, established as a London daily newspaper on the 2nd November, 1772, in support of the Whig political cause. It became a Conservative organ in 1874, and in 1881 its price was reduced from 3d. to 1d.

Morphology, the science which deals with the form, structure, and position of the different parts of animals and plants, and their developments.

Morpunkes, an Indian pleasure-boat, long and narrow, of considerable capacity, with a high peacock shape decoration at the stern.

Morris Dance, an old English country dance of the reel order.

Morse Alphabet, a system of dots and dashes, intended to be used in combination with the indicator in telegraphy; but usually read by sound, the receiving operator writing down the words in the system as transmitted. Professor Morse, of Massachusetts, was the inventor.

Mortars are short guns with a large bore and close chamber for throwing bombs. They are said to have been first used in the 15th century at Naples, but were not introduced into England until a century later. The mortars made at the present time are so powerful that they can throw shells of nearly 2,000 lb. weight a distance of over five miles. They are mostly used in siege work.

Mosaic, a joining together of small pieces of coloured glass, marble, or other materials in designs to imitate painting. The ancient Greeks and Romans acquired great proficiency in this art, which was revived in Italy in the Middle Ages with considerable success, many eminent painters designing subjects for mosaic. It is an art that still flourishes, and notable examples occur in some of the principal modern buildings.

Moscow, the Retreat from, was one of the most disastrous events in the career of Napoleon I. He entered Moscow on the 14th September, 1812, and the next day the Russians set fire to the city, practically burning it down. The French were forced to evacuate, and in making their retreat to France Napoleon lost the greater part of his army.

Moslems, the general European term applied to Mahomedans.

Mosque, a Mahomedan church, the greatest being that of St. Sophia at Constantinople.

Mosquito, a species of gnât which is most highly developed in hot climates, and is provided with a suctorial apparatus and a skin-piercing proboscis. Mosquitoes eagerly attack human beings for the purpose of sucking blood. Within the last few years many mosquitoes have found their way to this country, presumably with the fruit transported from tropical climes, and in Essex and other marshy districts of the South have become a serious annoyance.

Moss, the name of numerous flowerless, close-growing plants, common to moist hilly lands.

Moss-agate, a kind of agate characterized by minute grains of oxide of iron or chlorite, forming a moss-like pattern which is very ornamental.

Moss-troopers were bands of Scottish marauders who used the mossy regions of the Scotch and English borders as hiding places, and thence made frequent plundering expeditions, keeping that part of the country in constant unrest. It was not until the 18th century that they were finally put down.

Motets, short choral compositions, of which many fine examples survive. They were mostly written in the 15th century, and are generally settings of sacred writings or paraphrases.

Moths, a division of insects of the butterfly family, but differing from the latter in having antennæ tapering to a point. They are of nocturnal habit, and comprise a wonderful variety, some of those of tropical countries being of extraordinary brilliancy.

Motor Vehicles are being produced in ever increasing numbers year by year, the record of the last few years showing a remarkable expansion in every direction. The tendency has been greatly to strengthen the motor industry in the United Kingdom, with an accompanying improvement in the class of vehicles manufactured and a general cheapening of price. The placing of large numbers of motor omnibuses in service has had the effect of dislocating street traffic somewhat, and some exploitations have come to grief from various causes; but with a better type of vehicle this kind of service has become successful. The London General Omnibus Company's services are now wholly operated by motor vehicles. The loss of life resulting from motor traffic is very serious. During 1912, 182 persons were killed in London alone by motor buses. A Select Committee inquired into and reported on this matter in 1913, when important new traffic regulations were recommended. Motor cabs have proved a great boon. There has also been a remarkable increase in the number of motor vehicles used for industrial business, and military purposes, while the electric railways and tramways, above ground and underground, have multiplied to an enormous extent.

Mouse, a species of small rodent abounding in all countries, and forming, in conjunction with rats, a most extensive genus. The British species include the common house mouse, the harvest mouse, and the long-tailed field mouse.

Muggletonians, a curious sect founded by a tailor named Ludwic Muggleton—son of a London farrier—in the 17th century. Muggleton and his associate—also a tailor—John Reeve, proclaimed themselves the last witnesses of God to appear before the end of the world, as mentioned in Revelation, xi. 3.

Mule, the name of the spinning machine invented by Crompton in 1779, and so called from its combining the principle of Hargreave's spinning jenny with the machine invented by Arkwright.

Mullet, a species of well-known fishes, including the red, grey and striped mullets. The latter is best known in England, frequenting the Southern coasts.

Mullions are projecting windows with vertical divisions—or, more properly, such vertical divisions of mullioned windows—forming a highly decorative feature in Gothic architecture. The horizontal stones forming the crossing divisions between the lights of this class of window of the Elizabethan or Tudor period of Gothic are styled *transoms*.

Mummies are embalmed bodies, found mostly in Egypt; supposed to be those of distinguished people who lived thousands of years ago. Mummies have also been found in Peru, Mexico, and Persia. The embalming process which has enabled the bodies to be preserved can only be conjectured, though it is known that various aromatic substances were used after the viscera and other vital organs had been removed, the cavities being filled with absorbent dust, chippings, and cedar wood.

Murder is the term applied to the unlawful killing of a human being, "with malice aforethought." During the Heptarchy the crime was punished by fine only, and to Henry VIII's time could frequently be compounded for. Then followed a period of severe enactments, and down to 1830 murderers were executed on the next day but one after conviction. In nearly all civilised countries at the present time murder is punished with death, and can only be reduced by the "prerogative of mercy," never exerted unless mitigating circumstances exist.

Murain, a general term applied to infectious diseases in cattle.

Musk Deer, a small and interesting ruminant, which inhabits the mountain regions of Central Asia. It is grey in colour, slightly brindled, and carries a small pouch in the abdominal region, containing what is commercially known as musk, an article which is of great value in the manufacture of various perfumes.

Musk Ox, an animal partaking of the characteristics of both the sheep and the ox, and having a musk odour. It is a native of Northern Canada.

Muslin, a fine cotton fabric first made at Mosul, in Mesopotamia, and introduced into England about

the middle of the 17th century. In recent times muslins have been largely manufactured in England.

Naseel, a well-known bivalve found in great abundance on the rocks of the sea-shores. There is also a fresh-water species plentiful in streams and ponds.

Nestang, the American wild horse, descended from the stock first introduced by the Spaniards.

Mute, an old legal term signifying that a prisoner on being asked to plead remains mute, that is, makes no answer to the charge, or some answer that is irrelevant. Up to 1741 prisoners who "stood mute" were put to the torture. Since 1829, when a prisoner declines to plead, the court directs a plea of "Not Guilty" to be entered, and the trial proceeds.

Mutiny Act, which provides for the discipline, regulation, and payment of the Army, was passed in 1689, and has since been re-enacted annually.

Myriapoda, the class of invertebrate animals including centipedes, millipedes, and many others. They are widely distributed, but the largest species are found in the Tropics.

Myrrh, a resinous substance obtained from a tree of the natural order Amyridaceæ, growing plentifully in Abyssinia and Arabia. Its use for embalming, medical and aromatic purposes may be traced back to the most remote times.

Mysteries were theatrical performances given by ecclesiastics in the Middle Ages, with the object of conveying moral lessons and presenting Scripture stories in more or less realistic form. The Ober-Ammergau Passion play is a survival of one of these ancient mysteries.

Mythology, the name given to any collection of traditions and fables concerning imaginary gods and goddesses, especially applied to the ancient Grecian collection of myths.

N

Nabob, a term usually applied nowadays to a wealthy East Indian, though formerly given only to Governors, commanders, and other dignified persons who had resided in the Orient and returned to England with competence and an irascibility of disposition.

Nadir, the point in the heavens which is at the opposite pole from the place on which a person stands.

Nagadite, a rare mineral, found, usually in crystals, in Transylvania or the United States of America; it is a sulpho-telluride of lead and gold, with occasional traces of copper and antimony.

Nahum Festival, in commemoration of Nahum, the 7th of the 12 minor Hebrew prophets. It is held on December 24th. Nahum flourished about 713 B.C., during the reign of Hezekiah, and wrote his prophecies a short time after Sennacherib's invasion.

Naiad, a water-nymph of classic mythology, beautiful and mystic; celebrated by Virgil, Ovid, Homer, and other ancient writers.

Names of Places not only introduce us to many of the striking local characters of hygienic ages, but from them it is often possible to locate the earthworks and other primitive fortifications of our early progenitors, and also to ascertain which of the great races have peopled a particular district. The effect of local tendencies is seen all over England. The North retains *burgh*, as in Banburgh or Edinburgh; in the Danish district it has become *stang*, as in Gainsborough, Scarborough, and Peterborough; while in the Saxon South we have *bury*, as in Banbury and Canterbury. So also the Anglo-Saxon *ceaster*, formerly used to designate any Roman town, now has a special significance, based upon the way in which it has been adapted. In the old Mercian Kingdom it takes the form of *cester*, as in Worcester, Gloucester, Leicester, etc.; in the Scandinavian districts it becomes *caster*, as Lancaster, Doncaster, etc.; while the *chester* of such names as Manchester, Chesterfield, etc., indicates Saxon settlements. **Nankeen**, a kind of yellow cotton fabric originally made at Nankin in China, but now mainly manufactured in England, which actually exports the cloth to China.

Nantes, Edict of, was a decree promulgated by Henry IV. of France in 1598, giving full freedom of worship to the Protestants of the country. It was the revocation of this famous Edict in 1685 by Louis XIV. that drove hundreds of thousands of French Huguenots to this country.

Naphtha, a well-known liquid combustible believed to have been one of the ingredients of "Greek fire," and called by the Greeks "oil of Media." Mineral naphtha consists chiefly of mixtures of the hydrocarbons paraffin and olefine. Other kinds are obtained from coal tar and from wood by distillation.

Naphthalene is procured from coal tar, and its derivatives are much used in the manufacture of colours for dyers and printers.

Narcotics are substances which induce languor, and if taken in large doses produce insensibility or death. The best-known narcotics are opium, alcohol, coca, tobacco, hops, etc.

Narcotine, an alkaloid obtained from opium, and in its action less powerful than morphine.

Nardus, a coarse genus of grasses, growing on bleak upland heaths and hill slopes. *Nardus stricta*, commonly called "mat-weed," is a British species.

Narghile, an oriental tobacco pipe so constructed that the smoke passes through water and up a long flexible tube before reaching the bowl of the smoker.

Narwhal, a kind of dolphin, remarkable because the male possesses a spiral rod of ivory projecting from its head several feet in length. The animal itself is some 16 feet long and of whale-like form, with spotted skin. Found only in Northern seas.

Nasalis, a peculiar type of monkey, with a long prominent nose. The leading example is the "Proboscis monkey" of Borneo.

Naseby, Battle of, was fought on June 14th, 1645, between the Royalists, under the command of Prince Rupert and the king, and the Parliamentarians under Fairfax and Cromwell. It resulted in a complete defeat for Charles.

National Anthem ("God Save the King") has been the national hymn of England since about the middle of the 18th century. There is some doubt as to its origin, but Dr. John Bull is generally believed to have been its composer. The tune has been adopted for one of the National Anthems of the United States, "My Country, 'tis of Thee."

National Assembly of France was constituted on June 17th, 1789. Three days later the king ordered it to be closed, but the movement had got too firm a hold to be summarily put down, and the Assembly afterwards met at the Church of St. Louis and proceeded to perform acts of legislation. In 1792 it became "The National Convention."

National Convention of France was formed on September 21st, 1792, constituting the government of the first French Republic.

National Covenant, an oath and declaration subscribed to by the Scottish Presbyterians in 1580, to maintain their religion in all circumstances, and effectively brought to bear in opposition to Charles I.'s Episcopalianising designs in 1648.

National Debt of this country was started in 1604, when £1,000,000 was raised by William III. on the security of certain branches of the public revenue. Four years later the debt had increased to over £15,000,000. After Waterloo, in 1815, it stood at £88,500,000. The low-water mark of £28,993,653 was reached in 1899-1900, but the Boer War sent it up again to £745,015,000 in 1902-3. In 1903-4 it was £770,778,762, from which date another decrease set in, the figures for the year ending 1913-14 being £661,473,705.

National Gallery, established in 1824 in Pall Mall, London, with the Angerstein collection of 38 pictures, purchased for £57,000 as a nucleus. The existing building in Trafalgar Square was opened in 1838.

National Guard of France, a body of citizen soldiers first instituted on the day before the destruction of the Bastille in 1789, by the Committee of Public Safety. As the Revolution developed, the Guard did not command much sympathy, and ceased altogether under the Consulate and Empire. The National Guard was revived later, and proved some-

times very powerful in keeping order in the capital; but in 1871 its inefficiency had been made so manifest that its abolition was decreed. It was under municipal control, despite its sounding national name.

National Portrait Gallery, established in 1855, and now located in a building in St. Martin's Lane adjoining the National Gallery. Contains portraits of eminent people in history, literature, art, etc., and a valuable collection of medals and autographs.

National Rifle Association, founded in 1860 for the improvement of rifle shooting. The annual meetings formerly held at Wimbledon, but now at Bisley, attract large numbers of competitors, amongst whom valuable prizes are distributed.

National Service League, established in 1902 for promoting the movement for compulsory military service in Great Britain.

Nativity.—There are three Nativity Festivals in the Christian Churches, those of the Nativity of Christ, on December 25th, of the Virgin Mary, on 8th Sept., and of John the Baptist, 28th Aug. The first is the only one specially observed by Protestants.

Natrix, a water-snake, the typical genus of the Colubrine sub-family, widely distributed.

Natron, the old scientific name for native carbonate of sodium or mineral alkali, obtained from the ashes of marine plants.

Natterjack, a curious, warty, prominent-eyed, brown toad (*Bufo calamita*), having a bright yellow line down the middle of its back. It utters a muttering sort of croak, hence its name. It is not very common in Britain, but is plentiful in some parts of the European Continent and in Tibet, and is sometimes called the "Rush toad."

Natural, a musical term signifying the production of sound without flut or sharp. A composition is in the "natural" key when in the normal scale of C.

Naturalisation is the act admitting an alien or foreigner to the privileges of citizenship in his adopted country. As early as 1347 a Naturalisation Act was passed in England. Before a certificate of naturalisation is granted, the applicant must have resided in the United Kingdom for not less than five years, or have been in the service of the State for that period.

Naturalism in art and literature is an attempt to depict the actual, as opposed to the ideal. In philosophy it takes cognisance only of natural forces and ignores the supernatural.

Natural Selection, the term employed by Darwin to describe that development of species which resulted in the survival of the fittest, and the gradual extinction of the feeblest.

Nautech Girl, a native East Indian dancing girl of the professional class.

"Nautical Almanac", published under the authority of the Admiralty, is always issued four years in advance, and contains information specially prepared for the use of navigators and astronomers. It first appeared in 1767.

Nautilus, a term now applied only to the Pearly-shelled nautilus, the sole surviving example of the four-gilled section of the Cephalopoda, remarkable for its peculiar compartmented shell, and its power of instant sinking. It is only found in the open seas.

Naval Reserve (The) comprises the Royal Naval Reserve, established in 1859; the Royal Fleet Reserve, organised in 1901; and the Royal Naval Volunteer Reserve, dating from 1902, the latter including landsmen with a taste for sea life. The total personnel for 1912-13 was, Royal Naval Reserve, 21,534; Royal Fleet Reserve, 26,297; Royal Naval Volunteers, 4,100; grand total, 51,851.

Nave, is the body or main open portion of a cathedral or church, and extends from the chief entrance to the choir, or chancel, and is usually flanked by aisles. A nave, in mechanics, indicates the "hub" or central part of a wheel.

Navigation Laws, for the protection and encouragement of native shipping, have been frequently passed in England. The first English navigation law of any note was enacted in the reign of Richard II., its leading provision being that mer-

chandise should not be imported into or exported from England, except in English ships. This law fell into desuetude, and in 1751 fresh Navigation Acts were passed in favour of English ships, the carrying trade having fallen into the hands of the Dutch. The old navigation laws, however, were totally repealed in 1849.

NAVY, a country's fleet of vessels of war, in England called the Royal Navy. From the time of Alfred the Great, ships were maintained for war service, but the establishing of the Cinque Ports in the reign of the Conqueror coincided with the first comprehensive attempt to constitute a reliable fleet. Edward III., Henry V., and Henry VIII. all devoted considerable attention to the Navy. The *Henry Grace de Dieu* of the last-named King, 1,200 tons, was the largest vessel that up to that time had been built. In the reign of George III., when Great Britain had so much sea-fighting on hand, the Navy was put on a very extensive footing. In Nelson's time the British fleet comprised about 900 ships of the "wooden walls" type; and in 1814 the numbers were 177 ships of the line, 621 smaller armed vessels, and 150 employed on home and foreign service. The screw propeller was introduced into the Navy in 1840, which a decade later comprised 161 steam vessels and 339 sailing ships. In 1865 it possessed 258 steam vessels, carrying 6,682 guns, 271 sailing ships carrying 9,594 guns, 155 gunboats, and 111 vessels on harbour service. When hostilities broke out in Aug. 1914, Great Britain possessed a margin over Germany of 60 per cent. in ships, and 100 per cent. in men. Comparing the total of war vessels, built and building, of the contending nations, and omitting battleships and cruisers over ten years old, we get the following figures: Britain, 679; France, 382; Russia, 249; Japan, 161—a total of 1,471, of which 235 were being built; while on the other side the figures are: Germany, 359; Austria-Hungary, 157; Turkey, 22—a total of 538, of which over 80 were in course of construction. Of these, Britain had 34 ships of the Dreadnought class as against 21 owned by Germany; 74 of the pre-Dreadnought class as against Germany's 29; 83 cruisers to Germany's 43, and in other classes the preponderance was in like proportion. In naval personnel Britain stood at 226,000 on Aug. 3, 1914, and on Feb. 8, 1915, 35,000 men were being brought the total up to 248,000. The personnel of the German navy numbers 121,000. Up to May, 1915, the main German battle-fleet has been hidden away beyond strong coast fortifications and protected by a vast barrier of mines. In the meantime German cruisers were to prey upon British ships on all the oceans, and for a time these attacks were attended by considerable success; but to-day not one of these cruisers remains. In the handling of submarines Germany has achieved more success than in other naval operations. The various naval incidents of 1914-15 are recorded in the *Chronicle of the War*, pp. 717-725.

NASARENES, a sect of Jewish Christians who accepted the divinity of Christ and flourished in the 1st century.

NASARITES, persons who, as prescribed in Numbers vi, consecrated themselves for a limited period to sacred observances.

NAROTIC Region comprises the whole of North America and Greenland up to a latitude averaging about the tropic of Cancer.

NEBULA, luminous celestial masses of gaseous matter, which are either spiral or chaotic in form, the latter being the earlier stage of the former. They are visible through the telescope beyond the limits of the solar system.

NEBULAR THEORY (or *Hypothesis*), was originated by Kant, developed by Sir William Herschel, La Place, and others, and is now generally accepted by astronomers. It supposes that the solar system is built up by the condensation and cohesion of nebulae.

NECROMANCY, "the black art" was in olden times much believed in, and was supposed to be an occult power by which its practitioners could converse with the spirits of the dead in regard to the future.

Needle Gun—the ignition of the charge of which is

produced by a fine steel rod or needle being pressed through the cartridge—was invented in 1807, and in 1836 was adopted to the breech-loading principle. It was used with great effect by the Prussians in their wars against Denmark and Austria in 1864 and 1866, but has since been superseded by weapons of greater efficiency.

Needles, according to Stow, were first made in England in the reign of Elizabeth, and in Mary's time "there was a negro made fine Spanish needles in Cheapside, but would never teach his art to any." In modern times the manufacture of this useful article has been greatly improved and immense numbers are made now at Redditch.

Negrees, are the black-skinned, woolly-headed Negro races, natives of tropical Africa, or descendants from such natives. The people of the Soudan, Senegambia, and of the great lake regions are the truest types, though it is customary to call Kaffirs, Zulus, and other blacks negrees. There are nearly 10,000,000 negrees in the United States.

Negus, the name given to any mixture of wine and water, and said to have been named after Colonel Francis Negus about 1714. The sovereign of Abyssinia was styled the Negus.

Nelson's Monument, in Trafalgar Square, London, is a handsome column 145 feet high, with the figure of Nelson on the top, erected in 1843 at a cost of £15,000, the four bronze lions at the corners of the base being contributed some years later by Landseer. There are four bronze reliefs representing respectively the battles of the Nile, St. Vincent, Copenhagen, and Trafalgar.

Nematæus, a genus of insects of the willow-fly family, widely distributed and springing from larva, which reside in small protuberances on the leaves of the food-tree.

NEMES GAMES were instituted at Nemes in honour of Archemorus, and revived in 1226 B.C. They were celebrated every third year, and were finally given up in A.D. 306. The conqueror in contests of strength and agility was rewarded first with a crown of olives, and later with wreathed chaplets of parsley leaves.

Neogene, a geological term referring to the later Tertiary formation in contradistinction to the older Eocene strata.

Neophron, a genus of culture, the leading representative of which is the Egyptian vulture. It has a white-plumage with black primæ, a bare head, and is about two feet long. Other members of the family are the Scavenger vulture of India and the Africa Pileated vulture.

Neoplatonism, a philosophical system originated in the 3rd century, and considerably developed in succeeding centuries by Plotinus, Proclus, Hypatia, and others, the first named being its most active exponent. At first it was pure paganism decked out in philosophical trappings, but in its later phases was largely influenced by Christianity. The Neoplatonists contended that by concentrating the mind exclusively on higher speculations it was possible to achieve a condition of ecstasy in which the Infinite would be revealed. They were suppressed in the 6th century under Justinian.

Neotoma, the scientific name of the wood-rats of North America; they are of large size, have thick fur and include many species. *Neotoma cinerea* has a squirrel-like brush; the rest are rat-tailed.

Nepotism, a term indicating a bestowal of office or patronage amongst relations, and having its origin in the custom of certain Popes to enrich their family out of the offices of the Church.

Neptune, the most distant of the planets, estimated to be about 2,780 millions of miles from the sun, and taking about 160 years to make a revolution round that luminary.

Nesokia, a genus of Asiatic rodent of the bandicoot family, possessing a nearly naked tail. *Nesokia bandicota*, the "pig-rat," often exceeds a foot long.

Nesotragus, a sub-family of small but exceedingly graceful antelopes found only in Zanzibar and Mozambique.

Nestorians were at one time a very numerous body. They were followers of Nestorius, who was a patriarch of Constantinople in the 5th century. He taught that Christ was both human and divine, receiving His divinity from God and His human nature from Mary. There are still some Nestorian communities scattered about the world, principally in the Levant, though some few exist—more or less isolated—in America and even in London.

Nests are, strictly, habitations formed by birds for the reception of their eggs and the hatching and rearing of their young. They are of the most varied character, some being mere resting-places on the ground, while others display a remarkable skill in construction. Thus, the bower-bird and other species show very distinctive peculiarities. The most usual materials for bird-nest building are leaves, twigs, moss, wool, feathers, mud, clay, etc. Some birds burrow in sand-hills. A few mammals and certain fishes also build nest-like structures for breeding in.

Nethinim, an order of hereditary attendants upon the Levites in the services of the second Hebrew Temple at Jerusalem.

Neuroptera, an order of insects which includes dragon-flies, caddis-flies, may-flies, and other four-winged species. The larvae have six-jointed legs.

Never-Never Land is a name that is now frequently given to the seemingly impenetrable plains of Northern Australia. Who coined the phrase is not known, but it was first uttered on a London stage by Sir H. Beerboom Tree in the character of "Captain Swift," the gentlemanly Australian bushranger. The late Wilson Barrett used it as a title for both a play and a novel. It is also prominently used in Mr. J. M. Barrie's Christmas play, "Peter Pan." In the early "eighties" of last century Messrs. Sampson Low and Co. published a book with the title of *The Never-Never Land: A Ride through Northern Queensland*.

Newgate Prison, now pulled down and replaced by the handsome Sessions House opened in 1867, was situated near the point where once stood one of the old London city gates. There is record of a prison upon this spot in the 13th century. Later a new one was built by the executors of Sir Richard Whittington, but this was destroyed by the Great Fire in 1666. Still another new prison on this site was erected between 1778 and 1781. In the Gordon Riots of the latter year it was destroyed by fire and re-erected. It was disused as a prison after 1881.

New Lanark, in Scotland, was the place where Robert Owen established his socialistic factories and settlement in the early part of the 19th century. At first the scheme seemed to promise great success, but after a few years it had to be abandoned.

News Letters were an early form of newspaper, popular in the time of Charles II. They consisted of items of news and gossip collected at the various coffee-houses and places of public resort. They often included blank pages on which readers could write their private letters.

Newspapers did not come into existence before the early part of the 16th century, when, in Italy and Germany, one or two crude attempts at news-sheets were made. In 1622 and 1643 certain publications giving news were issued, but the *Publick Intelligencer*, established in 1633 by Sir Roger L'Estrange, was the first real English newspaper. It lasted three years, and was succeeded by the *Gazette*. The *Morning Post* is the oldest of existing English newspapers, having been started in 1775. The *Times*, under its first title of the *London Daily Universal Register*, was begun in 1785 and has been called by its present title since 1788. The first London evening paper was the *Globe*, begun in 1803. There are now over 5,000 newspapers, magazines, and periodicals published in the United Kingdom.

New Style, of calendar reckoning, was adopted in Great Britain in 1752. (See *Calendar*.)

Newt, the name of a small British amphibian of lizard shape and mottled markings. The largest species, the *Triton cristatus*, often attains a length of 6 inches.

New Testament. (See *Bible*.)

New Year's Day, the opening day of January. The first New Year's festival of which we have records is that constituted by Numa 713 B.C., and dedicated to Janus.

Nexum, an ancient Roman term indicating a ceremony of legal transfer by which a debtor unable to satisfy a debt became the creditor's bondman.

Nibelungen-Lied, the German epic of the 12th century comprising numerous mythical poems or sagas of which several English translations exist. These poems have been utilised with great effect as foundations for Wagner's famous series of operas comprised under the general title of "The Ring of the Nibelungen."

Nicene Creed, a summary of the principles of Christian faith, was first issued in 325 after being drawn up by the Council of Nice, and was meant to thwart the Arians, and assert the godhead of Christ.

Niche, a recess or nook constructed for the reception of a statue or other special ornament. Such niches are numerous in the older ecclesiastical buildings, and usually contain the figures of saints or historic personages.

Nickel, a white ductile metal forming one of our most useful alloys, being largely used in the manufacture of German silver, and also for coinage in America and France.

Nicolaitanes were a religious sect supposed to have originated with Nicholas, one of the first seven deacons of the Christian Church, and are mentioned in the second chapter of the Revelation. They denied the divinity of Christ.

Niccolò, a large brass reed instrument, common in the 17th century, but superseded by the bassoon, often alternately called an "oncollo."

Nicotine, an alkaloid substance contained in the tobacco plant. It is a clear, colourless oil and highly poisonous, paralysing the nerves. In the act of smoking tobacco, however, only an infinitesimal quantity is absorbed in the smoke.

Niello Work was in considerable vogue in the Middle Ages, and is said to have suggested the idea of engraving upon copper. It was produced by rubbing a mixture of silver, lead, copper, sulphur, and borax into engravings on silver, and some highly decorative results were obtained. The process is still largely practised in Russia.

Night-raven, sometimes called the night-raven, is a variety of heron of which only one species is known in Europe. It is an occasional visitor to Britain. It has a long white crest. In spite of its name its habits are not specially nocturnal.

Nightingale, a familiar singing bird which visits the southern counties of England every summer, and is sometimes found as far north as Yorkshire. It is a shy bird, not often seen, but the song of the male, usually heard in the late evening or at early morn, is of remarkable sweetness and variety. After its winged period is over its power ceases.

Night-jar, the popular name of the goatsucker bird. (See *Goatsucker*.)

Nihilism, in metaphysics the doctrine which rejects all belief that is unsupported by physical evidence. "Of positive or dogmatic nihilism there is in modern philosophy no example," Hamilton avers.

Nihilists, members of a political organisation which finds its most numerous supporters in Russia. They carry on their work in secret and appear to have representatives in all classes of society. They have been regarded as the moving spirits in many of the conspiracies and assassinations which have been so frequent in Russia during the last quarter of a century, their activity being greater than ever during the troubles subsequent to the Russo-Japanese war. How far the Nihilists were responsible for the assassination of Czar Alexander II. in 1881, and the numerous more recent assassinations of authoritative persons (including that of the Grand Duke Sergius) will probably never be fully known. The Nihilists will presumably remain a powerful obstructive force to autocracy so long as it exists on its present basis, for repressive measures appear impotent to crush them out of existence, and known Nihilists reside in every European capital.

Nile, Battle of the, fought in 1798 between the English and French fleets in Aboukir Bay, and lasted from sunset of the 1st of August to the next morning. Nelson captured or destroyed the entire fleet of the enemy but two ships.

Nilgau, or Nyilgau, an Indian Antelope of a blue-grey colour and a slightly humped shoulder. It is the largest of the few true antelopes indigenous to our Eastern Empire.

Nimbus, a cirelet of light depicted round the heads of saints or divine personages in ancient art.

"Nineteenth Century," a monthly magazine started in 1879 by Sir James Knowles; noted for the high quality of its contents, and the celebrity of many of its contributors. Now known as "The Nineteenth Century and After."

Niobium, an uncommon metal found in Colmaite and first called columbium by its discoverer Hatchett in 1801. Its present name was given to it by H. Rose in 1846, on re-discovering it.

Nirvana, in Buddhism, is the condition of supreme attainment, and involves the extinction of every form of desire, ambition, or unrest. It is the holy state.

Nitre, or saltpetre, is now mostly manufactured by the double decomposition of sodium nitrate and potassium chloride, and forms the explosive ingredient in gunpowder, lucifer matches and certain detonating powders. It has been manufactured in England since 1625. As found, in certain parts, of South America on the soil, it forms a valuable chemical manure.

Nitric Acid, or Aquafortis, is a compound of nitrogen, hydrogen, and oxygen, and was first separated by Raynold Lully, the alchemist, in the 13th century. It was not, however, until towards the end of the 18th century that Cavendish demonstrated its real nature. It is a ready solvent of many metals.

Nitrate of Ammonia is obtained by the action of nitrous acid on alcohol, and forms an effective remedy in ailments of the respiratory organs.

Nitrogen, a non-combustible gas devoid of taste or smell, and constituting nearly four-fifths of the atmospheric air. In the 18th century Scheele separated the oxygen of the air from the nitrogen.

Nitro-Glycerine, an explosive yellow fluid produced by mixing small quantities of glycerine with a combination of one part of nitric acid and two parts of sulphuric acid. It was first employed as an explosive agent by Alfred Nobel in 1864. It is the main constituent of dynamite.

Nitrous Oxide, a compound of mild anæsthetic power, combining nitrogen and oxygen. Discovered by Priestley in 1772.

Nizam, the title by which the old rulers of Hyderabad were known. The first Nizam was Asaf Jah.

Nobel Prizes. These prizes, founded by the will of Dr. Alfred H. Nobel (d. 1896), are five, each worth about £5,000, and are awarded each year for the most important discoveries or improvements in (1) physics, (2) chemistry, (3) physiology or medicine, (4) the most distinguished literary work of an ideal tendency (5) the best effort towards the promotion of peace. Among the British prize-winners are: for physics, Lord Rayleigh and Prof. J. J. Thomson; chemistry, Sir W. Ramsay, Prof. Rutherford; medicine or physiology, Sir R. Ross; literature, Rudyard Kipling and Rabindranath Tagore (Indian); peace, Sir W. K. Cromer. Among eminent foreign prize-holders are Prof. Röntgen, M. and Mme. Curie, Marconi, Maeterlinck, and Roosevelt.

Nobility are people enjoying titles of rank. At first the right of peerage was only territorial, but gradually men who achieved great deeds were similarly honoured. (See Different Titles.)

Noble, an old English gold coin current in the 14th century, and of the value of 6s. 8d.

"Noctes Ambrosianæ," a series of papers contributed by John Wilson ("Christopher North") to *Blackwood's Magazine* in the "forties" of the last century.

Nocturne, a name invented by John Field to indicate a certain kind of musical composition suggestive of night. Chopin used the term for his nocturnes for the pianoforte; and Whistler for some of his famous night effects.

Noddy, a kind of tern or sea-swallow common on the coasts of tropical countries along the warmer parts of the Atlantic borders. It is said to be of a dull nature, hardly making any attempt to avoid capture, hence its name of "noddy" or simpleton. *Anous stolidus* is the ornithological description of this bird.

Noeggerathia, the name of a genus of fossil plants found occasionally in European coal-measures; referred to the *Cycadeæ* by some palæontologists, but by others placed among the ferns.

Nominalists, a sect founded by Jean Roscellinus, Canon of Compiègne, in the 11th century, who maintained the doctrine that general ideas only exist by the names we give them, in opposition to the "Realists," who contended that general ideas are real things with positive existence.

Nomogeny, a term invented by Owen to express the life which has a natural origin, as opposed to *theismatology*, or miraculously produced life; the theory of spontaneous generation.

Nonage, an ancient term in ecclesiastical law signifying the ninth part of a deceased person's movable goods, which could be claimed by the clergy for devotion to pious purposes.

Nonconformists, or Dissenters, is the name given to all such religions as do not conform to the doctrine of the Church of England. Up to the passing of the Act of Uniformity in 1534 they were called "Puritans." At various times the Nonconformists have been rigorously persecuted, but in later times the utmost toleration has been granted to them. The oldest bodies of Nonconformists are the Presbyterians, Baptists and Independents. The Methodists date from 1739. Throughout the world there is a membership of Methodists of 30,000,000, Baptists 7,000,000, Presbyterians 5,000,000, Congregationalists over a million and a quarter, and Friends over 100,000, not counting the various smaller Nonconformist bodies.

Nonen were dates of the Roman calendar, which fell on the 6th of each month, excepting March, May, July and October, when they fell on the 7th.

Nonjurors were an ecclesiastical party who refused to swear allegiance to William III. In 1669, contending that James II. had been unjustly deposed, Sancroft, Ken, and several other Bishops were among them. Although they were deprived of their benefices and subjected to double taxation they adhered to their opinions for the most part.

Non Nobis, Domine! ("Not unto us, O Lord"), a musical canon, sung as a graceful public feast, an old setting (by Birde, 1618) of part of Psalm cxv.

No Popery Riots, headed by Lord George Gordon in 1780, assumed a very serious character for a time. The movement had its origin in the strong objection on the part of many people to the Act not long before passed granting certain indulgences to the Roman Catholics. For a few days the mob raged in London, burnt down a Newgate, liberating the prisoners from that and other jails, and committing great damage in many parts of the town. The military were called out, and in the various conflicts that ensued nearly 300 rioters were killed, and the loss of property was estimated at £180,000.

Norfolk Islanders are descendants of the mutineers of the "Bounty" who established themselves on Pitcairn Island in 1780. The Pitcairn families in the course of the next half century became so numerous that the island was unable to support them all, so in 1855 the British Government removed them to Norfolk Island, which was stocked with sheep, cattle and horses for their benefit. The Norfolk Islanders now number about 800, two-thirds of whom are descendants of the original mutineers.

"North Briton" was the title of John Wilkes's famous London political newspaper, in which from week to week he published scathing indictments of the King and the Government. His most bitter onslaught was in "Number 45," which charged the King with uttering falsehoods. In his speech, the King was several times prosecuted and imprisoned, but his paper had a wide influence for many years.

Northmen were the early inhabitants of Scandinavia, famous as sea adventurers, and pirates. Their attacks on Britain and other parts of northern

Europe prior to the 17th century were often successful, and they established settlements in the islands off the Scottish coasts, and in the north of France, where they founded the duchy of Normandy, from which the Normans who conquered England in the 11th century were descended.

North-West Passage, from the Atlantic to the Pacific through the Arctic seas, has been the dream of navigators for centuries, and many have been the expeditions which have gone forth in the hope of making its discovery, at great sacrifice of life and money. From 1743 to 1818 the British Parliament offered a reward of £30,000 for such discovery, and in 1818 the offer was altered so as to provide for a payment of £5,000 to anyone who passed either 110°, 120°, or 130° W long. Sir E. Parry was the first to win one of these payments. Sir John Franklin's ill-fated expedition in the ships "Erebus" and "Terror" set out in 1845, and though there is little doubt Sir John effected the discovery, he and all his associates perished. Sir Robert McClure achieved the passage in 1850-4. Numerous later expeditions have been undertaken, including those of McClintock, Young, Markham, etc. Sir G. S. Nares took command of a new expedition in 1875, in the "Alert" and "Discovery," for which Parliament voted £30,620. Dr. Nansen in the "Fram" (1893-6) reached a point nearer to the Pole than had ever before been attained. Expeditions under Greeley, Capt. Jackson, Lieut. Peary, the Duke of Abruzzi (see "Arctic Exploration"), and others, have also been more or less successful, and the North Pole and the North-West Passage will doubtless continue to attract fresh adventurers, in spite of the fact that the ice presents an impenetrable barrier to any sea passage in that region being of practical use.

"Notes and Queries," described as "a medium of intercommunication for literary men and general readers," was founded by the late Mr. W. J. Thomas in 1849, and was afterwards for many years under the editorship of the late Mr. Joseph Knight.

"Not Proven," a verdict peculiar to Scottish law under which, in criminal cases where the evidence not being sufficient to fully demonstrate the charge made, a prisoner is given the benefit of the doubt and set free, and cannot be retried even if later evidence of his guilt be discovered.

Notre Dame, the famous Paris cathedral, was founded in 1163, and is one of the finest specimens of Gothic architecture in Europe. The best descriptions of the building are to be found in Victor Hugo's "Hunchback of Notre Dame."

Novargent, a substance consisting of chalk moistened with a solution of oxide of silver and cyanide of potassium, and used for re-silvering plated articles.

Novatians were a sect founded by Novatus, a Stoic philosopher first and then a priest of Rome in the 3rd century, who differed from the heads of the church in regard to the mystical and ascetic doctrine. The Novatians did not stand out long, however, and most of them were taken back into the church.

November, the 9th month of the year originally, but from 713 B.C., when Numa added January and February, it took its present position as the 11th month.

"Novum Organum," Bacon's famous work, published in 1620, in which the main part of his system of inductive philosophy was set forth.

Noyade, a mode of execution by drowning practised during the Reign of Terror in France at Nantes. The victims were set afloat in a boat with a movable bottom, and when the vessel reached deep water the bottom opened and let the prisoners into the water.

Numismatics, the science of coins and medals, has proved a fascinating study to many, and has resulted in the discovery of valuable historic evidence at various times. The difference between a coin and a medal is that the former is a piece of money, while the latter commemorates some person or event. Numerous books have been written on both subjects, and there are many numismatic societies in existence.

Nummulites are fossil foraminifera, coin-shaped, varying in size from one-eighth of an inch to an inch, and belonging to the Eocene formation. Nummulite

limestone is the commonest of all the Tertiary rocks in Europe, Asia, and Northern Africa.

Nun-Bird, a South American harrier of sombre colour, with white patches and markings on the head and wings.

Nunc Dimittis, a familiar hymn ("Now lettest thou thy servant depart in peace"), forming part of the Evening Service in the various Christian churches.

Nuncio, the title given to a Papal Envoy to any Catholic State. In former times Nuncios acted as judges of appeal.

Nunneries, convents for the exclusive residence of women who have taken the vows, are common in Roman Catholic countries, and there are still a few in Britain. The first English nunnery was founded at Colchester in 690, and up to the dissolution of the monasteries such institutions were to be found in all parts of the country.

Nut-Hatch, a tree-creeping bird, common in various parts of the New and Old worlds, but represented in England by only one species. It has long, curved claws that fit it for climbing, and it feeds mainly on nuts.

Nutmeg, the kernel of the stone of a tropical fruit, used as a spice and highly aromatic.

Nyctea, a kind of snow-owl of large size and white plumage found in the Arctic and Sub-Arctic latitudes of Europe, America and Asia.

Nymphaea, the white water lily, dedicated by the Greeks to the water nymphs. *N. lotus*, an Indian species, is employed as a specific in cholera.

Nyssa, the black gum, or pepper-ridge tree of America, possessing a tough, almost unpalatable wood. The sub-acid fruit of one variety, *N. ravidissima*, is sometimes called the "Ogechee Lime," and used as a substitute for ordinary limes or lemons.

O

Oak, the most valuable of European timbers, remarkable for its strength and durability. Was used for building the ships of the British fleet from the days of Charles II. to its supersession by iron. Has always been extensively used in furniture construction and cabinet work.

Oak Boys, an insurrectionary Irish party which had a brief prominence in 1763, and having for their object resistance to an Act which compelled householders to labour on the roads for a time. They wore oak sprays as a badge.

"Oaks," the name of a famous race for three-year-old fillies run at Epsom two days after the "Derby."

Oakum, the name given to loose hemp and untwisted ropes, in the preparation of which prison labour is largely used in England.

Oasis, the name given to any fertile spot in a desert region. Such spots are fairly numerous on the Sahara and Libyan deserts, and some of them are extensively peopled and successfully cultivated.

Oates Plot. (See *Oates*, *Titus*, "Prominent People Section" of *Pears' Cyclopaedia*.)

Oaths were introduced into English judicial trials in the 7th century, and are referred to in the Old Testament (Gen. xxi., 24; Exod. xxii., 11). The oath of supremacy dates from 1535. Quakers were permitted to substitute affirmations for oaths from 1665. Braulugh's Oaths Bill, passed in 1868, allowed affirmations in place of oaths whenever required. Since Jan. 1, 1910, oaths administered in English courts have been by way of declaration and affirmation, the custom of kissing the New Testament having been dispensed with.

Oats, a well-known cereal product, probably native to Asia, but cultivated with considerable success for many centuries in Scotland and England. The United States also produces large quantities. Cakes and porridge of oatmeal are common articles of food in many countries, especially in Scotland.

Ochelak was regarded by the ancient Egyptians as the symbol of God, and as a monumental object was largely used by the Pharaohs. Twelve were transported from Egypt to Rome and set up at various

times; there is one in the Place de la Concorde, Paris; and one in London, on the Thames Embankment. The British Museum has two. What we call "Cleopatra's Needle" was originally erected at Heliopolis by Thothmes III., about 1200 B.C.

Oberammergau, the Bavarian village where a kind of miracle play is acted in which the different episodes in the Passion of Christ are depicted. These performances take place every ten years, and attract a crowd of visitors from all parts of the world.

Obi, the Japanese name for a coloured sash commonly worn by Japanese women, and tied with a large bow at the back of the waist.

Obit, the date or the anniversary of a person's demise; the term is used also in reference to a service of a religious character celebrated on such an occasion.

Oblation, a gift offered in worship, referring especially to the bread and wine given by the laity for the Eucharist.

Oblivion, Act of, was the act of "free pardon and oblivion" in respect of "all treasons and state-offences" committed between 1637 and 1660 (the Civil War and Commonwealth period), excepting from it the "regicides" and certain priests.

Oboe, a well-known musical reed instrument, and a leading feature in symphonies and concertos. It was introduced into England about 1720.

Obolite Grit, a green-grained grit of Lower Silurian age and calcareous character, containing the obolus mollusc fossils, found in Russia.

Obolus, a silver coin of ancient Athens worth about a penny farthing in English. The name was also adopted for small coins in different parts of Europe in the 14th and 15th centuries; besides being applied to a small weight, equivalent to the sixth part of an Attic drachme. In paleontology an obolus is a fossil *Lingulide* of the Silurian period.

Obscurantists, a term applied to persons who are adverse to the extension of knowledge and view with distrust all measures of reform and the opening up of new lines of thought.

Observants were certain members of the Franciscan order who in the 15th century adopted a milder policy than that of the monastic order, and ultimately were approved by the papal authorities.

Observatories existed in ancient Babylon and Egypt. They were erected on tombs and temples. The most famous observatory of Egypt was that of Alexandria, erected by Ptolemy Soter, 300 B.C. It was not until the 16th century, however, that an observatory adequately equipped for astronomical investigations was built. This was at Cassel. Tycho Brahe's observatory at Uraniburg was erected in 1576. The Royal Observatory at Greenwich was completed in 1675. In recent times such institutions, public and private, on a large scale, have been erected. At his observatory at Parsonstown, in Ireland, Lord Rosse erected a telescope the error of which was 6 feet in diameter, and cost £50,000. At the Lick Observatory, California, the telescope has a 36 inch refractor, but the largest hitherto is that at the Yerkes Observatory, Chicago, which has a tube 75 feet long and an object glass 40 inches in diameter.

Obsidian, a form of volcanic rock of vitreous structure, and usually a silicate of aluminium, lime, magnesium, etc.

Ocarina, a simple kind of musical instrument usually made of terra cotta with a whistle mouth-piece and finger holes. It has a rather liquid sound, and played by an expert is pleasant to listen to.

Occultation, in astronomy, refers to the concealment of a celestial body by the passing before it of some other heavenly body. The most frequent occultation is that of a fixed star by the moon.

Occultism, originally the practice or study of the occult sciences, including alchemy, astrology, magic, necromancy, etc.; but in recent times referring only to theosophy, spiritualism, palmistry and so forth.

Ocean comprises the great body of water which covers five-sixths of the surface of the earth, and has an average depth of two miles.

Ocean Currents are well defined streams running over certain portions of the ocean and caused in various ways. Usually the currents run in the direc-

tion of the poles from the equator, and by a natural counteraction currents are set up in the opposite direction. The ocean current with which Europeans are most familiar is the Gulf Stream.

Ocean Monarch, the name of an emigrant ship which left Liverpool for Boston on 24th August 1848, with 400 persons on board. She took fire off Great Orme's Head and 178 people lost their lives.

Ocelot, usually called the leopard cat, is common in the more Southern parts of the United States, in Mexico and Brazil. It is about 4 feet in length, including tail, and of a grey or tawny colour, and spotted. It is very destructive to weaker animals, but does not devour them, contenting itself with sucking their blood.

Ochres, the name of a number of natural earths impregnated with mineral colorings, chiefly silica and alumina. They include iron ochre, yellow ochre, and plumbic ochre, being respectively oxides of iron and lead. Ochres are largely used in the making of paints.

Octagon, in geometry, is a plane of eight angles and eight sides, and is a regular octagon when all the sides and angles are equal.

Octahedron, in geometry, consists of a solid figure bounded by eight triangular faces.

Octarchy, the name given to the kings of the English heptarchy, Hengist (455) being the first, and Egbert (800) the last.

Octastyle, in architecture, is a term applied to an eight-columned portico such as that of the Parthenon of Rome.

Octatauch, meaning a collection of eight books, is a term generally applied to the first eight books of the Old Testament.

Octave, in music, is the interval between one note and the eighth note from giving a perfect concord.

October, the 10th month, but the 8th in the old Roman calendar. It was held sacred to Mars.

Octopus, an invertebrate fish of the *Cephalopoda* group, sometimes called "the devil fish," has eight arms covered with suckers, and a head with horny jaws and large globular eyes. It is very common in the Mediterranean.

Odstols are special taxes levied on articles of food before entering a city. They have been established in France since 1817, and still exist, though at various periods they have been suspended.

Ocuba Wax, a vegetable wax used in Brazil in the manufacture of candles, and obtained from the fruit of *Myristica ocuba*.

Oddfellows, the name of a prominent friendly society whose headquarters are at Manchester. It existed in the 18th century as a social club, but was reorganised on its present basis in 1814. It has now nearly 5,000 lodges, and a membership (including the juvenile branch) of close upon a million, with a capital exceeding twelve million pounds sterling.

Odes were originally extempore compositions sung in honour of the gods by the ancient Greeks and Romans. They were divided into three sections: strophe, antistrophe, and epode. All the most famous ancient odes—of Anacreon, Pindar, Horace—were composed before the Christian era. Among the best known English odes are those of Milton, Dryden, Collins, Gray, Wordsworth and Keats.

Odeum, a small theatre for the recitation of musical compositions, generally contiguous to a larger public theatre; thus the odeum of Athens in classic days adjoined the theatre of Bacchus.

Odometer, an instrument for measuring distances travelled by wheeled vehicles. Such apparatus have been known since the 17th century, but have been greatly improved in recent years, as instance the taximeter.

Odontograph, a term in mechanics signifying an ingenious instrument enabling engineers to design and lay off infinitely the teeth of gear-wheels.

Odontography, a description of the teeth and the natural phenomena of dentition.

Odontology, the science of the teeth, is but of comparatively recent growth and includes odontography and the study of dentition.

Odour of Sanctity, a phrase which originally

expressed the belief that the corpse of a holy person emitted a sweet odour, while that of an unbaptised person gave forth an evil odour; the term is now employed figuratively of the reputation.

Odryse were a Thracian race who maintained their independence of the Persians for a long period, until Philip II. of Macedonia subdued them about 345 B.C. They ultimately became absorbed in the Roman Empire under Vespasian.

Odyli, Baron von Reichenbach's name for a supposed magnetic force developed by the material universe in general, and variously termed odic force, odylic force, etc. It has not met with scientific acceptance.

Odysey, the famous epic poem setting forth the incidents of the wanderings of Ulysses on his way back to Ithaca after the Siege of Troy.

Oecumenical Council, one of the general councils of the Eastern Church, the first of the character of historic importance being that of Chalcedon in the 5th century.

Oeil-de-Bœuf, a term in architecture denoting openings, usually round or oval, in friezes, roofs, or domes of buildings, designed for the admission of light.

Ogham, an ancient style of Irish or Celtic writing consisting of characters formed on either side of a straight line drawn on wood or stone, not used later than the 6th or 7th century.

Ogulnian Law, the passing of which was secured by the two Tribunes Ogulnius, B.C. 300, had the effect of increasing the number of the Pontiffs and Augurs, and conceded eligibility for those offices to Plebeians.

Ogyges Deluge, occurred in 1764 B.C., inundating Attica to such an extent that the country lay waste for nearly 200 years afterwards. It takes its name from King Ogyges, who reigned at the time.

Ohm's Law, was propounded by Dr. G. S. Ohm, and determines the quantity of the electro-motive force of the Voltaic battery. It is in accord with the discovery that the earth can be utilised as a conductor, and obviates the employment of a return wire in electric telegraphy. An ohm is the unit of resistance in electro-magnetics.

Odium, the botanical name for a fungus, a variety of which is found on the grape-vine, causing what is known as the "vine disease." Another variety, *Odium lactis*, generates on the surface of sour milk; while yet a further form, *Odium adhaes*, develops, in certain unhealthy conditions, aphthae in the human mouth.

Oil Cake has in recent years come into great favour as food for cattle. It is made from linseed, rape, and cotton seed, after the oils have been extracted, and is very fattening.

Oil Gas, a combustible gas obtained by the decomposition of oil, yielding a brilliant light, and largely employed for illuminating purposes.

Oils are of three classes, fatty or fixed oils, volatile or essential oils, and mineral oils. Fatty oils are obtained from animal and vegetable matters; fixed oils are used in the manufacture of soap, for lubricating purposes and for illumination. Volatile or essential oils are obtained by distillation and are used mainly for essences and colouring mediums; mineral oils are mostly used for producing artificial light, and are being largely utilised as oil fuel. Oil was used in lamps in the time of Abraham, and the references to it in the Old Testament show that the Jews used special oil for anointing kings, priests, and other high personages. Numerous experiments have been made with oil for calming turbulent waves, and a certain success has attended these experiments. (See *Petrol*, *Petroleum*.)

Ojibway Indians are a renowned tribe inhabiting the great lake districts of Canada. At one time they were very warlike and gave much trouble to the Government, but in recent years they have become largely civilised and live in prosperous settlements.

Oibers' Comet was discovered in 1815 by Oibers the German astronomer. Oibers also discovered the asteroids Pallas and Vesta, the former in 1802 and the latter five years later.

Old Bailey, the name generally given to the Sessions Court, adjoining Newgate Prison, for the

trial of criminals in the City of London and throughout the county of Middlesex. There are eight sessions held during each year at what is still styled the "Old Bailey." The judges appointed to try cases are the Recorder and the Common Serjeant, one or more judges of the High Court, the Lord Mayor and such aldermen as have passed the Chair. The Court House has recently been entirely rebuilt on a handsome and substantial scale.

Old Believers, a term applied to a Russian sect which separated from the Greek Church in 1654 in opposition to the Patriarch Nikon. They are said now to number over twelve millions.

Old Catholics are the German Catholics who declined to accept the dogma of papal infallibility, and now form an independent sect. Professor Dollinger of Munich was their first leader, and Père Hyacinthe (Charles Loyson) has been the principal exponent of the party in England and Switzerland.

Old Red Sandstone is a geological term for the group of rocks lying below the Carboniferous formation. It has three series: the Upper, Lower, and Middle Devonian, all rich in fossils. Another name for this group is the Devonian formation.

Olefant Gas, or ethylene, is obtained by acting on ethyl alcohol with concentrated sulphuric acid, or phosphoric acid. It is present in coal gas to the extent of about 6 per cent. It is a hydrocarbon and burns with a luminous flame.

Olefines, a series of hydrocarbons, in which the hydrogen atoms are double the number of those of carbon. The first member of the series is olefant gas. Olefines differ from paraffins in that they combine directly with the halogens and the haloid acids, which paraffin will not do.

Olive Acid, a prominent element of numerous fats and oils abounding in those obtained from the olive almond, and similar fruits. It is styled an organic acid and contains oxygen, carbon and hydrogen, and is much used in the manufacture of certain soaps.

Olein, a colourless oil obtained from animal and vegetable fatty oils, and very widely distributed. It is not found in a pure state, and is soluble in alcohol and ether, but not in water.

Oliographs, the name given to reproductions of paintings in oils, the colours of the original being more or less faithfully copied. The process is one that closely resembles chromo-lithography.

Oleo-Margarine, a solid fat of a yellowish colour, obtained from the leaf-fat of cattle. This fat is submitted to certain patented processes and put on the market as margarine, a substitute for butter, which it closely resembles in appearance and to some extent in flavour.

Oleometer, an instrument for ascertaining the specific gravity of oil. (See *Hydrometer*.)

Oleron Laws are supposed to have been passed by Richard I. while on the island of Oleron, off the coast of France, in 1194, and have reference to the commerce of the seas.

Olibanum, a resinous gum obtained from the trees of the *Boswellia* genus, grown in Somaliland and India. It is of an aromatic order, and used as incense.

Olivinite, a mineral of an olive-green colour, occurring in crystals lying near copper ore. Scientifically it is an arsenate of copper.

Olives are the fruit of the olive tree which grows so abundantly in Italy, and which in recent years has been cultivated with considerable success in Southern California and Australia. A stone fruit; in its unripe condition it is largely used for pickling purposes. Olive oil is obtained from the pulp of the fruit, and is the lightest of all fixed oils.

Olivine, a chrysolite, is a mineral of a pale green colour, found in volcanic rocks and meteorites. It is essentially a double silicate of iron and magnesium.

Olla Podrida, a sort of Spanish 'haggis,' combining in a stew a number of meats and vegetables.

Olympiads were periods of four years, the era of the Greeks and originated in 776 B.C., this method of computation lasting until A.D. 440, when the 350th Olympiad ended.

Olympic Games, instituted in honour of Jupiter by the Greeks, were held every 5th year at Olympia in

the Peloponnesus. These ancient festivals continued, with intervals, from 1543 B.C. to A.D. 394. **6**

Olympieum was the name of the famous Temple of Jupiter erected near Peloponnesus by Libon, after the conquest of the country by the Eleans. A colossal statue of Jupiter in gold and ivory was executed for this Temple by Phidias.

Omacontha, a genus of beetles, of the sub-family *Laminiæ*, one very large species of which is the *Omacontha gigas* of the Gold Coast.

Ombrometer, an instrument for gauging the depth of rainfall.

Omega, the last letter of the Greek alphabet, and widely adopted in literature in its figurative sense as indicating the end of anything.

Omens are auguries or presentiments of some coming event, usually something evil. In olden times omens, portents, and signs were seriously regarded, and among the Greeks and Romans emanated chiefly from the priests or augurs who were supposed to be the recipients of the warnings of the gods.

Ommiades, the name of a dynasty of Mahomedan caliphs, fourteen of whom reigned in Arabia 661-751, and eighteen at Cordova in Spain 755-1031.

Omnibus, a public four-wheeled vehicle for conveying passengers along certain routes at specified fares. A few instances of this kind were seen towards the end of the 17th century in Paris, but did not become popular until revived in that city in 1808. In the following year the first English omnibus was started in London, its running being between Paddington and the Bank of England. The idea quickly extended, and in the course of a few years, general services were in operation. The London General Omnibus Company was established in 1856, and the London Road Car Company began operations in 1883. Motor omnibuses are now a prominent feature of town transit everywhere, the old horse omnibus having almost entirely disappeared from the streets of London.

Ommimeter, an invention for superseding chain measuring and combining the theodolite and level. It was introduced in 1869, and is the invention of a German engineer named Eckhold.

Omnipotent Act, the name given to an English law passed in 1664, which provided that judgments and executions in Civil cases should not be stayed except upon certificate. It received its name from granting the Courts such extensive powers.

Omnivora, the scientific name of the hog tribe of non-ruminants, ranging from pigs to hippopotami.

Onager, the wild ass inhabiting themountain districts of Central Asia, and valued as food by the Persians.

One Pound Notes were issued by the Bank of England in 1797 and remained in circulation until 1823, when they were withdrawn. A further issue took place in 1825 but lasted only a short time.

Onus Probandi, a legal term signifying that the onus of proof rests on the party or side indicated. This obligation of proof generally devolves upon the supporters of an affirmative.

Onyx, a kind of agate or quartz having its colours arranged in parallel layers. Onyx cuts and polishes well, and is much used for cameos.

Oolitic Formation, a geological term indicating beds of secondary rocks lying immediately below the Neocomian formation, and existing through a long stretch of country extending from Yorkshire to Dorsetshire. It abounds in fossils of molluscs and reptiles. Portland is a typical stone of oolite or rock-stone formation.

Oolitic Structure occurs in limestones, and comprises very small rounded grains, suggesting the roe of a fish, or the spherical seeds of certain plants; each grain containing a minute central nucleus, round which the component carbonate of calcium has been deposited.

Opah, a kind of deep-sea fish remarkable for its delicate colouring. It has scarlet fins, and starry silver spots, with blue and rose-coloured interminglings. It is an inhabitant of the Atlantic and averages from three to four feet in length, sometimes being called the "Kingfish."

Opals are mineral substances, consisting of silica-like

quartz, and are of numerous varieties and colours, ranging from white to brown and green. Some have a vitreous lustre and transparency which constitute what is called "opalinescence." Opals are in great favour for jewellery; the best come from Hungary.

Operas are stage pieces in which music is the dominating feature, and have been one of the leading forms of amusement in modern times. There is a record of French opera performed as far back as 1230. The Italian opera came into being towards the end of the 18th century, and in 1600 an opera on the subject of Euridyce was given at Florence on the marriage of Marie de Medicis and Henry IV. of France. Louis the XIVth set up an opera in Paris in 1672. Scarlatti was the most prolific producer of operas of the 17th century. About 1584 a species of opera was being performed in London under the management of Sir William Davenant. In 1711 Handel's "Rinaldo" was produced at the Haymarket; Gay's "Beggar's Opera" was first given in 1727, and ran for 63 nights; the operas of Mozart had a marked influence upon the development of operatic music at the latter part of the 18th century. The leading opera composers of the 19th century were Beethoven, Rossini, Weber, Donizetti, Auber, Verdi, Meyerbeer, Gounod, and the last-named composer being the one who most marked development that has hitherto occurred in the history of opera. Among the composers of light operas the names of Offenbach in France and Sir Arthur Sullivan in England rank high.

Opera Singers of Title. Malibran became by marriage Countess de Merlin; Alboni, Countess de Pepolo; Pauline Lucca, Baroness von Wallhofen; Christine Nilsson, Countess Casa Miranda; Adeline Fatti, Marquise de Caux by her first marriage, and subsequently Baroness Colerstrout; Ella Russell, Countess de Rhigny; Mme. Belska, Countess Brochocki; and Pauline Jordan, Baroness de Busch.

Opheleide, a brass musical instrument in the nature of a keyed bassoon, was invented by a Frenchman named Fricliot early in the 19th century, and it has since played a useful part in brass bands.

Ophidia, a zoological term designating the order of reptilia embracing snakes and serpents.

Ophthalmoscope, an instrument invented in 1821 by Helmholtz for examining the interior of the eye.

Ophiozooida, a genus of birsen with only one existing representative, the ophiocoonus of South America, remarkable for its curious crest and long and delicately-coloured tail.

Opium was known to the ancients, and used by them as a medicine. It is obtained from the white poppy, the unripe "head" or seed capsule of that flower yielding a juice which when dried becomes the opium of commerce. The poppy is largely cultivated in India, Egypt, Persia, and Asia Minor, for the sake of this juice, which yields various alkaloids, such as morphine, narcotine, thebaine, etc. Laudanum is a tincture of opium. The Chinese are great smokers of opium, and the habit is one difficult to relinquish when once acquired. In 1906 the Chinese Government proposed to the British Government an arrangement by which the importation of Indian opium into China should cease within ten years, and at the same time measures were adopted for closing opium dens in China.

Opium War, so called because it followed on the destruction in 1840 of a number of British vessels carrying opium into Chinese ports. The result was the establishing of the "Treaty Ports" of China and the cession of Hong Kong to England.

Opossum, a familiar marsupial mammal found in the more southerly of the United States, South America, and Australia. It has a long prehensile tail and is not much larger in size than a cat. The females possess a pouch, in which they keep their young. It is of nocturnal habits, and a good scavenger.

Oppositionists, a term which first came into use politically in France after the Franco-German war, and referred to a section of the Republican party of which Gambetta was the leader, who held that the true political policy was not to force opinions upon

the people, but to wait until circumstances favoured their advocacy.

O. P. Riots, at Covent Garden Theatre in London, lasted, off and on, from the 18th September to the 16th December 1800. They were caused by the increased prices of admission which T. P. Kemble endeavoured to institute. The public declined to pay the increase, and clamoured for the old prices. Much damage was done to the theatre during this time, and the audience made it impossible for the performers to be heard. The riots were only ended by the restoration of the old prices.

Optics, the science which investigates the nature and properties of light and the phenomena of colour. Ptolemy wrote a treatise on optics 120 B.C., and burning lenses were known to the ancient Greeks. Spectacles were invented in the 13th century, and the camera obscura in the 16th century. Telescopes were not known until about 1570, and the microscope not before 1600. Among the most eminent writers on optics of modern times was Prof. Tyndall.

Optimism, the theory that everything happens for the best, has been propounded by many fathers of the church and philosophers, from Plato to Rousseau. It is the opposite of pessimism.

Oracles were in ancient times supposed to be words spoken by the gods, and it was the custom on important occasions to consult these oracles as to the future. The Croak and the Oracles of Zeus at Dodona, and Apollo at Delphi, while the Romans consulted the Oracles of Mars, Fortune, and others.

Orange, a fruit growing in most sub-tropical climates and in universal demand. It is grown on an evergreen tree that attains a height of about 20 feet at maturity.

Orangemen are Irish Protestants, who derive their name from having originally supported William III., Prince of Orange. They exist in greatest numbers in Ulster, where the Protestant religion dominates.

Orang Outang, one of the largest of the anthropoid apes, found only in Borneo and Sumatra. When full grown it stands over four feet in height, and has very long arms. It lives mostly in trees, and exists on fruits, buds, etc.

Oratorians were originally an order of priests founded by St. Philip Neri, about 1564, and received their name from the Oratory of St. Jerome, where they worshipped. They also established themselves in France in the 17th century, and in England in recent times the Oratory at Brompton, where Father Faber and others have ministered, serves in a measure to commemorate the earlier order.

Oratorio, a sacred musical drama, performed without scenic aid, originated with St. Philip Neri, and from about 1550 to the early part of the 18th century this class of composition was not known out of Italy. In 1738 Handel's Oratorio "Israel in Egypt" was performed, and the "Messiah" in 1741. Other great oratorios have been Haydn's "Creation," Beethoven's "Mount of Olives," Spohr's "Last Judgment," Mendelssohn's "Elijah," and Costa's "Eli."

Orbit indicates the course of a planet round the sun. All the planetary orbits are elliptical.

Orchestra, a band of instrumental performers, either attached to a theatre or opera, and occupying a position close to the stage, or a separate band of orchestral performers engaged to interpret musical compositions apart from vocal illustration. A properly organised orchestra comprises stringed, wood, brass, wind, and percussion instruments.

Orcin, a colouring matter obtained from lichens. It assumes a deep blood-red colour when dissolved in ammonia, and in this form it is called "orcin."

Ordeals, or trials by ordeal, were known in England in the time of the Saxons, and existed down to 1218, when they were abolished. The ordeals were usually of fire, water, or poison. The accused would be set to handle red-hot iron, be cast into water, or made to partake of poison, and unless he could withstand these tests he was condemned as guilty.

Ordens. (See **Knighthood**.)

Ordens, Holy, in the Roman Catholic church are of seven kinds, extending from door-keepers,

exorcists, readers, and acolytes, in the minor class, to deacons, priests and bishops of major rank; while in the Protestant churches there are only three—deacons, priests, and bishops.

Orders in Council are such as are issued by the Sovereign as a result of the deliberations of the Privy Council.

Ordination, the ceremony of installing ministers or clergymen in clerical offices, has existed from the earliest times. In the Anglican and Roman Catholic Churches the rites of Ordination are performed by Bishops; among Nonconformists the power of ordination rests with the governing bodies of the different churches.

Ordinance Office was an old Government department entrusted with the supply of weapons and materials of war from the time of the archers to the days of guns and explosives. After the Crimean campaign, when the administration of the Ordinance Board was shown to be very defective, the office was abolished, and its duties vested in the War Minister.

Ordinance Survey, an authorised survey of Great Britain, entrusted to a special body of Royal Engineers and civilian experts, by whom maps and charts are from time to time produced, showing the full details of the geographical, geological and industrial condition of the country. The scale adopted for counties is 6 inches to 1 mile, and 1 inch to 1 mile for the general map of the kingdom. In 1870 the Ordinance Survey was placed under the direction of the Board of Works.

Ordonnances were special laws enacted by the French kings prior to 1789. They were issued in the name of the king, and had the effect of Acts of Parliament. It was the revival of ordinances by Charles X. that led to the Revolution of 1830.

Ores are metalliferous deposits of rock from which, under the process of smelting, the metallic elements are separated from the useless material. Ores are found in layers or beds, and are classed as oxides, which contain iron, tin and copper; and carbonates, such as iron, copper, zinc, and lead.

Organs are said to have been invented about 250 B.C., and form a highly scientific adaptation of the primitive pandean pipes. The instrument began to be used in churches in the 7th century, from which time it became the most prominent musical feature of Church services. Among the largest organs in the world are the following:—that of Haarlem, which has 60 stops and 8,000 pipes; the Albert Hall organ, 125 stops; the St. George's Hall (Liverpool) organ, 110 stops; one at St. Louis, America, 150 stops; and one in the Sydney Town Hall, 120 stops.

Orgies were originally secret celebrations in honour of Bacchus, and noted for the wild license displayed by the celebrants.

Orguette, a musical instrument composed of reeds which are played upon by a bellows. A strip of paper passes over the holes of the reeds, moved by a crank, and the paper is cut into holes, to represent the required sounds. As the rollers turn the bellows the melody is "ground out."

Oriel College, Oxford, derives its name from a building called "l'Oriole" which stood on its site; was founded by Archdeacon Adam de Brome in 1326.

Oriel Window is a window projected from the front of a building, and may be rectangular, triangular, or pentagonal. The ordinary bay window and bow window are varieties of Oriel. When an Oriel window is cut into holes, to represent the required sounds. As the rollers turn the bellows the melody is "ground out."

Orientalists, an association of Oriental scholars, who from time to time hold meetings in congresses in different European cities. The first international congress of Orientalists was held in Paris in 1873. Others have since been held in London, Berlin, Vienna and other cities.

Oriflamme, the name of the original banner of the abbey of St. Denis, and adopted by Louis VI., as his standard, and remained the national emblem of France for three centuries. The flag was of red silk, the outer edge being cut in the form of flames.

Originists, a sect of religionists who were followers of Origen who lived in the 3rd century. They

- believed that men's souls were created before their bodies, that the celestial bodies had souls, and that Christ was the Son of God only by adoption and grace. The Council of Constantinople in 553 condemned Origen's doctrine.
- "Origin of Species,"** the title of Darwin's famous work—by many considered to be the most important book of the 19th century—which was first published on November 24th, 1859.
- Oriole,** a beautiful family of birds of the *Passeres* order, including the Golden Oriole, which is familiar in Central Europe in the summer, and sometimes gets as far as England. The male is of a bright yellow plumage, with black wings and tail. There are several varieties of oriole in America, all of them showing the same distinctive colorations.
- Orion,** a famous constellation of the heavens, comprising nearly a hundred stars, all visible to the naked eye. It contains three stars of the second magnitude in a line, and these are called "Orion's Belt."
- "Orlando Furioso,"** the title of Ariosto's famous epic poem, describing the doughty deeds of Orlando and other knights of the Charlemagne period. It was written in the 16th century.
- Orleanists,** members and supporters of the House of Orleans, of which King Louis Philippe was a member. The present chief representative of the family is the Duc d'Orleans, who resides chiefly in Brussels.
- Ormolu,** a specially treated form of brass which assumes a gold colour and is largely used for decorative purposes, metal mountings and furnishings.
- Ormulum,** a version of the gospels and acts made by Orm, an ecclesiastic of the 12th century. It is metrical and exists in manuscript in the Bodleian Library.
- Ormuzd,** the spirit of good according to the Zoroastrian religion, represented as eternally warring against evil and personating purity of life.
- Ornithology,** the branch of Zoology which treats of the structure and habits of birds.
- Ornithorhynchus,** an aquatic bird, curiously mammalian in general structure, but oviparous, of which but one species is known, the Duck-bill or Water-mole of Australia and Tasmania.
- Orphrey,** the name of an ornamental border of gold and silver embroidered on ecclesiastical vestments.
- Orpiment,** a compound of arsenic and sulphur yielding the colour known as "king's yellow."
- Orreery,** an instrument by which the motions of the heavenly bodies are indicated. It consists of a globe encircled by a brass meridian line, and was the invention of Charles Boyle, the 3rd Earl of Orrery. Many improved developments of this machine have been made in recent times.
- Orris Root,** the dried root or stem of a species of iris common in Southern Europe. It has medicinal uses, and is esteemed for its perfume and its utility in tooth-powder composition.
- Orthotomus,** a dainty little bird of the warbler kind including the tailor-bird. They inhabit Java, Sumatra, and Borneo, and have a dozen species.
- Ortolan,** a graceful bird of the bunting family, native to Southern Europe, and an occasional visitor to England. It is greatly esteemed as an edible delicacy.
- Osborne House,** near Cowes, in the Isle of Wight, Queen Victoria's favourite winter residence, and where she died, is now used as a convalescent home for naval and military officials, having been presented to the nation by King Edward VII.
- Ossella,** the name given to a medal yearly struck and distributed by the Doges of Venice from early in the 15th century to the close of the Republic. It was of gold or silver, and was inscribed with the name of the Doge, the year of issue, and generally bore some symbolic design.
- Osier,** a species of willow growing in damp soils and yielding branches utilised in basket-making.
- Osmium,** a metal of the platinum order and one of the heaviest of known metals. It is obtained from the platina of South America, California, Australia and Russia, and has not hitherto been fused. The chief commercial purpose to which it is put is that of providing the tip for gold pens.
- Ossprey,** a bird of prey widely distributed over all northern latitudes and a common visitor to the lakes of Scotland, where it used to build and breed. It is commonly known as the fish-hawk, and feeds almost entirely on fish.
- Ostracism,** a method of proscription adopted by the ancient Greeks, whereby sentences of banishment for ten years were voted. The names of objectionable persons were written on small shells by the people, and these were collected in an urn and presented to the Senate, when a scrutiny took place, and the one whose name oftenest appeared was sentenced; but no one could be ostracised unless at least 6,000 votes were recorded against him. Ostracism ceased about 338 B.C.
- Ostrich,** a large African bird which inhabits the sandy plains, and is highly valued for the rich feathers grown on its wings and tail. The neck and legs are naked. The wings are useless in flight, but the birds have a fleetness of foot exceeding that of the swiftest horse. An ostrich's egg weighs 3 lbs.
- Ostrogoths,** the Eastern Goths who flourished in the 4th and 5th centuries. Under their famous leader, Theodoric, they founded a monarchy in Italy in 493, but were overthrown in 553.
- Otary,** the name of a kind of seal remarkable for its external ears. It inhabits the sea-coast and islands of America, especially those of the North Pacific. The sea-bear and sea-lion are included in the family.
- Otheoscope,** an apparatus invented in 1877 by Sir W. Crookes, for showing molecular motion, the effects of radiation.
- Otter,** an aquatic carnivorous mammal widely distributed over Europe, and at one time very common in England and Wales. Otter hunting, indeed, is still a country sport in some districts, and a breed of dogs called otter-hounds is kept for the purpose. The otter averages about a foot in length, exclusive of tail, has web-feet, and is a very expert swimmer.
- Obliette,** the name given in the Middle Ages to a secret dungeon which formed part of the equipment of the old baronial castles.
- Ounce,** a carnivorous member of the cat family, spotted like a leopard and having a long bushy tail. It is only found at high altitudes on the Himalayas, and is often called the "snow leopard."
- Outlaw,** one who has been placed beyond the pale of law and is not entitled to its protection. Previous to the reign of Edward III. it was permissible for anyone to kill an outlaw. In modern times, however, outlawry applies only to property.
- Ouzel,** a bird of the thrush family, comprising the ring-ouzel and the dipper, both familiar in Britain.
- Ovation** was a triumph which the Romans accorded to their generals on their return after achieving victory, and did not amount to such a distinctive honour as a "triumph."
- Oviparous,** a zoological term referring to such mammals, birds, reptiles, and fishes as bring forth eggs to be hatched outside the body of the parent.
- Ovis,** the zoological name for the typical genus of sheep, including both the domestic sheep and their wild originals.
- Ovoviviparous,** a zoological term applied to such animals as produce eggs which are hatched in the body of the parent; the viper, the scorpion, and the earthworm are examples.
- Owens College,** Manchester, now incorporated with Victoria University, was founded in 1846 by means of a bequest of £100,000 by John Owens, a Manchester merchant. Various other valuable bequests have been made to the institution, and a handsome college building was opened in 1873.
- Owl,** the common name for a rapacious nocturnal bird distributed over the greater part of the world. Eleven species exist in Britain, including the barn-owl, the tawny owl, the long-eared owl, and the short-eared owl. Owls are remarkable for their large heads and round piercing eyes, embedded in rings of feathers. They are voracious feeders and live on the smaller mammals, birds, insects, and fish.
- Ox,** the popular name of the mammals included in the genus *Bos*. They are hollow-horned ruminants and hoofed quadrupeds, and include the various classes of domestic cattle as well as the different wild species.

The adult male is called a bull, the female a cow, and the young a calf. The best-known breeds of domesticated cattle are the Durham, or shorthorn, the Angus, the Jersey, Yorkshire, Suffolk and Hereford.

Oxalic Acid, an organic acid obtained from numerous plants, such as sorrel and rhubarb, and produced artificially for commercial purposes from sawdust, treated with caustic potash or caustic soda. It combines with metals to form oxalates.

Oxford Clay, a geological formation consisting of a bed of clay hundreds of feet thick, and forming the lower portion of the Middle Oolite series.

Oxford University was founded in the reign of Henry III. on the site of certain schools which were said to have been built by King Alfred. Merton College was founded in 1267. Queen Elizabeth granted the University a Charter of Incorporation in 1570. The University has been greatly extended in modern times and has to-day in residence between 3,000 and 4,000 undergraduates. It comprises the following colleges:—University, Balliol, Merton, Exeter, Oriel, Queen's, New, Lincoln, All Souls, Magdalen, Brasenose, Corpus Christi, Christ Church, St. John's, Trinity, Jesus, Wadham, Pembroke, Worcester, and Hertford.

Ox Gall, the fluid secreted from the gall-bladder of the ox, and used, after clarifying, for fixing colours.

Oxybaphon, an ancient Greek vase with a wide mouth and a handle on each side. The side spaces are usually filled in with figures in low relief.

Oxygen is the most abundant of all substances, a gas that forms one-third of the solid earth, one-fifth of the atmosphere, and eight-ninths by weight of all water. Dr. Priestley in 1774 was the first to separate it from red oxide of mercury. It is colourless, tasteless, and odourless, and forms the chief life-supporting element of animal and vegetable life.

"Oyer and Terminer," a legal term designating a commission directed to the judges of the Supreme Courts, empowering them to hear and determine charges of treasons, felonies and misdemeanours, in the counties to which they are proceeding. Courts of Assize are known as Courts of Oyer and Terminer.

Oyez! a phrase used by the Ushers of Courts of Justice to proclaim silence. It is the Norman-French word "Oyez" meaning ye.

Oyster, a bivalve mollusc, of the genus *Ostrea*, having a very numerous species, and abounding in nearly all seas. The shell is rough and irregular, and the body shows a very simple organisation. Oysters are exceedingly prolific, spawning in May and June. In England and Scotland deep sea oysters are not allowed to be sold between 15th June and 4th August, and other kinds between 15th May and 4th August. In Ireland, no oysters may be taken between May 1st and September 1st, except in certain waters. The British supply is so greatly below the demand that large quantities are imported from America, Holland, and Portugal.

Oyster Catcher, a wading bird of considerable size found in most parts of the world and remarkable for its habits of feeding on small oysters and other molluscs.

Ozokerite, a mineral hydrocarbon found in Moldavia and Wallachia. From it is obtained a substance from which a special class of candle is made.

Ozone, is an active modification of oxygen and contains three atoms to the molecule, while oxygen contains only two. It is only present in extremely small quantities, sea-air containing the most, and large towns none at all.

Ozonometry, the determination of the presence and properties of ozone in the atmosphere.

Paca, a genus of burrowing rodents of the Dasyproctidae family, found only in S. America, and in size and shape resembling the guinea-pig. It is of nocturnal habits, has streaked and spotted fur, and lives on fruits and plants.

Pacific Ocean, the most extensive body of water on the earth's surface, covering nearly one-third of

the entire extent of the globe. It is bounded on the south by the Antarctic Ocean, and on the north by the Arctic Ocean, on the east by the Western coast of America, and on the west by Asia and Australia. Its total length is about 9,000 miles, its greatest breadth 12,000 miles, and its entire area over 68,000,000 sq. miles. It has only been known to Europeans since 1513, and the first English navigator to cross the Pacific was Drake in 1577. In certain parts it is more than five miles in depth, and scattered here and there over its surface are innumerable islands.

Pæan, the song of praise or triumph sung by the Greeks on the occasion of great celebration.

Pæon, a foot, in ancient prosody, consisting of one long syllable and three short; the positions of the long syllable being variable.

Pagans are heathens or idolaters, people who do not worship God. The Roman Senate renounced paganism in 385, but it was not finally put an end to until 501.

Pagoda, the name given in China, India, and other Asiatic countries to a pyramidal tower, usually, but not necessarily, connected with a temple.

Paleontology, the science which is devoted to the investigation of fossil evidences, animal, vegetable, and mineral. The achievements attained in this science by the many distinguished men who have followed it have been of the most valuable kind, establishing with astonishing accuracy the orders of animal existence belonging to the various prehistoric periods. Some 50,000 species of animals and plants have been made known through the researches of paleontology.

Paleotherium, a genus of extinct tapir-like animals of large size, discovered in the Paris basin and other places, and belonging to the Upper Eocene Age.

Paleozoic, a geological term indicating the most ancient division of the strata formation of the earth's crust, and comprising two main groups, the newer and the older.

Palanquin, an East Indian covered vehicle fastened to a pole and carried on the shoulders of four or six natives, now falling into disuse because of improved methods of conveyance.

Palatinate, a term formerly applied to two German electorates or provinces, the Upper and Lower Palatinates, Amberg in Upper Bavaria being the capital of the former, the latter being the Rhineland Palatinate. They were apportioned amongst Bavaria, Baden, Hesse, and Prussia in 1806.

Pale, the name given to the part of Ireland colonised by the English and comprising portions of the counties of Louth, Dublin, Meath, and Kildare. The Anglo-Saxon rulers were styled "Lords of the Pale."

Palimpsests are ancient MSS. or parchments which have been partly effaced and used for fresh writings. Many valuable MSS. were thus lost, but in numerous cases the second writing has been washed out, enabling the original writings to be deciphered. Among the treasures thus restored are a dialogue of Cicero's, a portion of a book of Livy, and others.

Palium, a vestimental ornamentation of white wool presented by the Pope to archbishops on their appointment, and the sign of Papal confirmation.

Pail Mall, the name of a celebrated West London thoroughfare, called after a French ball game played thereabout in the early part of the 17th century. See *Pears' Dictionary of Sports and Pastimes*.

Palm, a large straight-trunked plant or tree common to tropical countries, and usually fruit-yielding, such as dates, cocoa-nuts, etc. Many commodities useful to man are obtained from them.

Palmsbury, the pretended art of reading a person's destiny by the lines of the palm of the hand.

Palmitic Acid is obtained either from palm oil or solid fats, and forms a white tasteless and odourless substance. In combination with glycerine it forms "palmitin."

Palm Sunday, the Sunday before Easter, upon which occasion it is customary to carry palms to the churches in some countries, in commemoration of

Christ's entry into Jerusalem for the Feast of the Passover, when the people went forth to greet him with palm branches.

Pampas Cat, the wild cat of the Pampas of South America. It is of a yellow grey colour with striped sides and exists in very large numbers.

Pampas Deer, a small but graceful deer that inhabits the South American Pampas. The males possess large antlers. There are only two species.

Panpillon, a funny kind of cloth much used in olden times as garment trimming.

Panama Canal, over which Lesseps came to grief, is now nearing completion, and is to be officially opened on January 1st, 1915, although shipping passed through experimentally on September 25th, 1913, the date of the 40th anniversary of the discovery of the Pacific by Vasco de Balboa. Its advantage to the United States—which up to now has had to rest content with a sea route of 12,000 or 14,000 miles separating her Eastern from her Western seaboard—will be enormous, for now a canal 49 miles long will connect the two oceans. America started with an expenditure of £10,000,000, and an engagement to pay, after ten years, an annual rent of £50,000. In exchange for this she gets the virtual ownership of the canal zone, the Panama railway, the results of the canal company's excavation and construction work, and their plant. For M. de Lesseps' original scheme a lock canal has been substituted, with its upper level at the middle of three alternative elevations; that is, at 90 feet above sea-level. The work is estimated to entail an expenditure, beyond that of payment to previous companies, of over £50,000,000. There was friction between the U.S. and British Governments in regard to certain treaty concessions to England, but a more friendly disposition has now developed.

Panda, a Himalayan wild cat of a bright red colour with large ears and a low bushy tail. It is also found in Tibet.

Pandean Pipes, supposed to have been invented or played upon by the god Pan, consist of seven reeds tuned to scale and blown into by breath from the lips of the performer.

Pandex or Pandects, a summary of the Roman civil law, prepared by order of the Emperor Justinian, 529. A copy was burned at Amalfi in 1537.

Pangenesis, Darwin's hypothesis by which he explained the phenomena of organic reproduction. As Darwin stated it, it implied that every separate part of the organisation reproduces itself.

Pangolin, the scientific name of the "scaly anteater," a member of the armadillo family, found in Africa and Southern Asia. It has an extensive tongue, covered with glutinous matter, which it uses in catching ants, its chief food. When once caught on the tongue, the insect cannot escape. When attacked, the pangolin rolls itself into a ball, and its scales assume the form of sharp spikes.

Panorama, a name given to almost any series of continuous scene pictures exhibited, but strictly pertaining to such scenes when arranged round the inner walls of a circular building and viewed from the centre. Mr. Robert Barker, an Edinburgh artist, was the first to give a panoramic exhibition, in 1788, and its success induced him in the following year to show a panorama in London. Great improvements have been made in such "shows" in later times.

Panславизм, a movement to combine the different Slavonic peoples into one nationality.

Pantagruel, the leading character in one of the satires of Rabelais. A hero of gigantic proportions and marvellous exploits.

Pantheism, the doctrine taught by Xenophanes in the 5th century B.C., and having for its motto: "Everything is God, and God is everything." A kind of Pantheism has found its way into most religious and philosophical systems; Buddhism and Hinduism partake of this doctrine.

Pantheon, the famous temple in Rome, built about 5 B.C. by Agrippa and consecrated to the gods, its splendid dome and portico constituting it one of the most interesting architectural monuments of ancient days. Since the 7th century it has been used as a

Christian church. The Pantheon at Paris, built in 1764, is modelled upon it.

Panther, a large carnivorous quadruped, akin to the leopard, native to India and other parts of Asia, and found also in Africa.

Pantomimes were originally stage representations in which speech was not permitted, all the action being carried on by gesture and movement. The ancient Greeks and Romans favoured them. Later on pantomime became popular throughout Europe, and in the 18th century, with clown, harlequin, and columbine imported into it, was adopted as a form of theatrical Christmas entertainment in England, and still meets with acceptance, although in recent years the fun and frolic have been for the most part replaced by spectacle. The most famous English pantomime clown of the early period was Joseph Grimaldi.

Papal Infallibility, a dogma stoutly maintained by one party in the Roman Catholic Church, rejected utterly by another, and tolerated by a third, was finally adopted and promulgated by the general council at Rome on July 18th, 1870, a great many bishops having withdrawn by way of protest against the decree. Professor Dollinger was excommunicated at Munich for rejecting this dogma in 1871. See "Old Catholics."

Papaver, the typical genus of the well-known botanical order *Papaveraceae*, or poppies, found upon every continent of the globe in some form or other.

Paper has been known in one form or another from very early times. The papyrus reeds of the Nile swamps served the ancient Egyptians for sheets upon which to inscribe their records. The Chinese and Japanese, centuries later, were using something more akin to modern paper in substance, an Asiatic paper-mulberry, yielding a smooth fibrous material, being utilised. With the spread of learning in Western Europe the necessity for a readier medium made itself felt, and paper began to be manufactured from pulped rags and other substances, though as to the precise period when this was accomplished, or by what country, there is no definite information. Paper was made in England in the reign of Elizabeth from linen and cotton rags, and down to a comparatively recent period these materials have constituted the chief component of paper. Other paper-making staples have been introduced in recent years, such as surat, a kind of bark brought from India, waste jute, esparto grass, and wood pulp. In modern mills logs are dissolved with sulphur and other solvents, and become pulp in three or four days. Then this is ground to finer consistency in a series of formidable machines, and is ultimately run off through heated rollers in continuous sheets, sometimes miles in length. Sizing is introduced generally at the pulp stage. Blotting and filtering papers are unsized, and are rendered additionally absorbent by the use of wool. The machinery for cutting the paper into sheets as required is of very ingenious construction. "Hand-made paper" is formed exclusively of prepared rags. The United Kingdom, apart from its own very large resources in this respect, imports nearly 4 millions pounds sterling worth of material for paper-making annually. Great quantities of paper for British newspaper use is now being made at Newfoundland paper-mills from native timber.

Paper Hangings were first manufactured in the East and entered Europe by way of Holland in the 16th century. In the 17th century they were adopted in England, and in recent years the improvements of this class of article have been great.

Papier-mâché, a composition of paper pulp and other substances, to which, when moulded into the desired form, coatings of japan, with gilt and coloured inlayings, are added. Many elegant and decorative objects are made of papier-mâché. There is also a ceramic papier-mâché, which is much more durable.

Papyrus, the earliest known form of paper, made in Egypt at a very remote period, from a large species of reed.

Parachute, an apparatus in the shape of an umbrella, intended mainly for use by aeronauts in

times when their balloon is in danger. In recent years many descents from balloons have been made by means of parachutes for the amusement of the public, and some fatalities have attended these exhibitions.

Paralele (the Holy Ghost, or Comforter), the name used in the English translations of St. John's Gospel, and adopted by Abelard to designate the convent in Champagne founded by him, and of which Heloise became the abbess.

Paradise, a Persian word used by the translators of the Old Testament to designate the Garden of Eden, and since incorporated into the language in regard to any place of happiness.

Paraffin was first obtained by distillation of coal, the process being discovered about 1830. About 1848, Mr. James Young procured it from mineral oil, and Irish peat also yielded it. The main source of paraffin supply to-day is crude petroleum. It is largely used in the manufacture of candles, for water-proofing, and numerous other purposes.

Parcel Post was established in England in 1883 for inland parcels up to 7 lb. in weight, the maximum being raised to 11 lb. in 1886. The system has since been extended to India, Egypt, and other countries. The British Postal authorities carry over a hundred millions parcels annually now, the postage on which exceeds two millions sterling.

Parchment, made chiefly from the skins of animals (those of the sheep and goat being mostly utilised), was employed in olden times, before printing was invented, for writing books upon. Latterly it has been mainly used for legal documents. A vegetable parchment was invented by W. E. Gaine in 1857, and though not equal in strength and durability to skin parchment, has been largely employed. Velum is parchment made from the skins of young calves or lambs.

Pardons are remissions of penalties or punishments, a power that is usually vested (at least nominally) in the king or other heads of the state of a country. The term implies complete, not partial, remission.

Parhelia is the term applied to the very peculiar phenomena known as "mock-suns" seen sometimes in the higher Arctic regions. At these times the sun is attended by a number of halos crossing each other in various geometrical forms, and said to be due to the refraction of light caused by crystals of ice floating in the air.

Pariah, a very low caste of Hindû, outside the pale of regular castes, and avoided as something unclean. They are the lowest class of labourers, but are often employed as servants to European families.

Paris University is said to have been founded by Charlemaigne, but as known to modern times was established in the 14th century, and is one of the greatest educational institutions of Europe.

Parliament, as a British institution, derives its origin from the Saxon general assemblies, or Wittenagemot. The representatives of the people later formed a House of Commons, which was settled by statute in 1258 and gradually acquired its present transcendent and absolute power and jurisdiction, and sovereign and uncontrollable legislative authority. The name comes from the French word *parlement* or discourse.

Parquetry, the name of a style of flooring consisting of small rectangular wooden blocks laid down according to geometrical pattern.

Parrot, the popular name of a widely distributed family of tropical birds, including the African grey parrot, the green parrot of South America—both familiar cage pets in this country—and the various parakeets, cockatoos, macaws, lorics, etc. Nearly the whole of these birds possess a remarkable gift of imitating sounds, especially that of the human voice.

Parsons, descendants of the Zoroastrians, or Fire-worshippers of Persia, are now more numerous in India than in the land of the Shah. They are born traders, and many of them not only possess great wealth but are renowned for their charities.

Parthenon, the famous Temple of Minerva at Athens, erected about 442 B.C., under the superintendence of Phidias, who therein placed his

renowned statue of the Greek goddess. The Parthenon was 227 feet long by 101 feet broad, and was in the pure Doric style. The ruins still existing are of considerable extent.

Passionariats, a German political party-name applied to such members of the smaller states as in 1871-2 opposed absorption into the empire.

Partridge, a well-known British game bird, the shooting of which forms a considerable attraction to sportsmen in the season, which opens on September 1st. There exist only three species, two of which are native to this country.

Passquinades, short satirical poems such as Pasquin, the Roman cobbler poet, used to amuse the public with by reciting from his stall.

Passionists, a priestly order founded in the 16th century in Italy by St. Paul of the Cross. In 1842 some Passionists established themselves in England, and the order has now several houses in this country, the leading one being at Highgate; the late Cardinal Manning solemnly blessed this monastery at its institution in 1876.

Passover, the chief Jewish festival, commemorating the departure from Egypt, and the incident of the Angel of Death passing over the houses of the Israelites.

Passports were at one time a necessary voucher for travellers, and consisted of a licence signed by a ruler, or proper State official, authorising the person named to pass through a country, or from one country to another. Passports to British subjects are granted by the Foreign Office. They may be considered as practically abolished, however, except in war time; though their employment in certain Continental countries sometimes still facilitates travel.

Pastel, a painting material mostly used for portraits, composed mainly of paper and colouring matter.

Paston Letters, a series of letters that passed between members of the Paston family, of Norfolk, in the 15th century, and affording much detailed information concerning the social condition, manners, and customs of the period.

Paten, the dish used for holding the consecrated bread in the Eucharistic service.

Pathology, the science of diseases, in their full physiological and anatomical bearings; investigating their predisposing causes, characteristic symptoms, and progress from inception to climax and conclusion.

Patricians, the aristocracy of ancient Rome, comprising Senators, or their descendants.

Paul's Cathedral, St., stands on the site of an ancient Pagan temple that existed in London in the 3rd century. The present noble building is the third that has been erected on this ground. The second—a fine Gothic structure which possessed what was then the highest spire in the world—was totally destroyed in the Great Fire of 1666, and in 1674 the first stone of Wren's great church was laid. The edifice was completed in 1710 and cost £51,200. Its total length from the main portico to the east end is 550 feet, its breadth 282 feet, and its height to the top of the cross 103 feet.

Pheasant, a bird of large size and beautiful plumage, its characteristic features being a tail of brilliant "eyed" feathers, which it has the power of erecting and spreading out, the males possessing resplendent feathering to a much greater extent than the females. The bird has been semi-domesticated in Europe from early times. It is a native of India and Java, and is said to have been first brought to Europe by Alexander the Great.

Pean, a term in heraldry indicating one of the furs borne in coat armour, the ground of which is black, with ermine spots of gold.

Pearl is produced by certain shelled molluscs, chiefly the oyster. The inner surface of the shells of the pearl oyster yield "mother-of-pearl," and distinct pearls are believed to be morbid secretions, caused by some external irritation. Many fine pearls are found in the actual body of the oyster. Madagascar, Ceylon, the north-west coast of Western Australia and the Gulf of Mexico are among the most productive pearl-fishing grounds. In ancient times Britain was renowned for its pearl fisheries,

the pearls being obtained from a species of fresh water mussel. The Shah of Persia gave £180,000 for a pearl, and Cleopatra is said to have given £30,000 for another. Western Australia has produced the largest pearl, the finest the world has seen. The largest pearl ever found was the "Beresford Hope Pearl," which weighed 1,800 grains, over six times as much as the oyster that produced it. The ex-Empress Eugénie had a necklace of pearls which were found in the Fiji Islands, and valued at several thousand pounds. But her most famous necklace was one of matchless black pearls. Philip II. of Spain had a large pearl valued at £10,000. Louis XIV. gave a pearl to Madame de Maintenon which weighed 111 grains. Baroness de Forest's pearls are said to be worth £50,000, while Lady Denman possesses a rope of pearls, 400 in number, valued at £60,000, each pearl being worth £150 on the average. A pearl necklace, valued at over £100,000, was stolen during transit through the post between Paris and London, in the early part of 1913, and the capture of the thieves, followed by the discovery of the pearls in the roadway at Highbury, formed one of the sensations of the year.

Penal Law was a serious rebellion which spread over Southern Germany in 1924, the result of a strong religious movement. It awakened a terrible conflict, in which cruel atrocities were committed, and was not suppressed until it had run a course of violence for about a year. The members of one revolting band were called the "Bundschuh," from the large shoes they wore.

Peat, decayed vegetable matter found mostly in marshy positions, and common in Ireland and Scotland. Peat is coal in its first stage of development. It is burnt for fuel in many cottage homes.

Pecary, an animal of the Ungulata order, found in large numbers in South America. They are shaped like a boar and are of pig-like habits. They are dark-coloured, covered with bristles and provided with tusks, which form powerful weapons of attack.

Peculiar People, a religious sect—founded in London about 1830—who held the theory that it was sinful to call in medical aid when people were sick, prayer being all-sufficing. Numerous charges of manslaughter were brought against these people from time to time because of neglect of medical aid, and some were imprisoned. Occasionally "Peculiar People" still figure in the police courts.

Pedometer, an instrument for recording distances walked, but only capable of registering the number of steps taken.

Peel Tower, the name applied to the numerous fortified towers or strongholds which are to be found along the Scottish Border. They serve both as dwelling-houses and places of defence, and belong to the period when lawlessness had to be reckoned with more seriously than nowadays.

Peep o' Day Boys were members of a secret insurrectionary society of Irishmen who in 1784 and later caused a good deal of trouble to the authorities. It was their custom to visit the houses of the "Defenders" at daybreak and carry off their arms.

Pelagians were a sect of the 5th century, founded by a Briton named Pelagius, who was preaching in Rome circa 400. A bitter controversy was aroused over the Pelagian doctrine, which maintained, among other things, that the consequences of Adam's sin did not go beyond himself, and that the general resurrection of the dead was not due to the resurrection of Christ. Pelagianism was condemned by the councils of Jerusalem and Carthage.

Pelican, a genus of bird with long depressed bills, and a sort of pouch suspended beneath, enabling the bird to hold a number of fish in reserve for future consumption. They have intense wings and webbed feet. Two species inhabit Eastern Europe, and seven other species occur in tropical climates.

Pemmican, venison or other meat that has been sliced, dried, pounded and made into cakes, for use by explorers and others who are likely to be out of reach of fresh meat for a considerable time.

Penal Laws are such enactments as impose a penalty for certain acts of omission or commission by

persons of a different faith from that which is established. Penal Laws were originally directed against Roman Catholics, and under Elizabeth, James I., and William III. were repeatedly enforced with great injustice. At one period Roman Catholics were deprived of many important civil rights, and it was not until 1829 that their emancipation from these Laws was fully carried out.

Penance, a punishment prescribed or voluntarily accepted as atonement for a sin or offence. Public penance was largely exacted in olden times, and in the Roman Catholic Church to-day penance appointed to the sin is imposed at confession.

Penguin, a genus of large birds with small wings and webbed feet, existing in enormous numbers in the Southern Ocean and Antarctic Sea. They breed on the rocky coast, and in the season are to be seen in vast numbers standing erect over their eggs. They are facile swimmers, and live on fish.

Peninsular War lasted from 1808 to 1814. Wellington defeated the French at Fuentes D'Onoro, Albuera, Ciudad Rodrigo, Badajoz, Vittoria, Salamanca, and entered France with the Allies in 1814.

Penitentiaries are special prisons where convicts are sentenced and put through a course of training intended to reform and make useful citizens of them. The term is now used to designate places where criminals serve sentences of penal servitude.

Penitents were a conventual order established in 1522 by Bernard of Marseilles, and consisted mostly of repentant courtiers. They were called Penitents of St. Magdalen. Similar orders were established at Paris and Orvieto at later periods.

Pentateuch, the first five books of the Old Testament, Genesis, Exodus, Leviticus, Numbers, and Deuteronomy.

Pentecost, in the Christian Church, the Whitsuntide festival in commemoration of the descent of the Holy Ghost upon the apostles during the feast of the Pentecost; to the Jews it is a time of solemn celebration—"the feast of weeks," celebrated on the 50th day, or seven weeks after the Passover.

Peppin, the leading constituent of the gastric juice, which may be obtained by digesting parts of the mammiferous membrane of the stomach of suitable mammiferous animals in water. It is used as a remedy for indigestion, and other medical purposes.

"Pepps' Diary," written by Samuel Pepys, Secretary to the Admiralty under Charles II., was first published in 1825. The original MS. is deposited at Magdalene College, Cambridge. The "Diary" gives a graphic picture of the social life of the period.

Perch, a well-known family of sea and fresh-water fishes, with dark striped sides. The common perch of British rivers and lakes falls an easy prey to the angler because of its voracity.

Perfumes are essences or odours obtained from floral and other substances. The chief flower perfumes are those obtained from rose, jasmine, orange flower, violet, and acacia. Heliotrope perfume is largely obtained from vanilla and almonds. Among the aromatic herbs which yield attractive perfumes are the rosemary, thyme, geranium, lavender, etc., while orange peel, citron peel, musk, sandal wood, patchouli, and other vegetable products are largely drawn upon. In recent times chemistry has been called into play in aid of the perfumer, and many of the popular perfumes of to-day are chemically prepared in simulation of the scents of the flowers or other natural substances the names of which they bear.

Peripatetics were followers of Aristotle, the name arising from the philosopher's habit of walking up and down while he expounded his theories.

Periwig. (See *Peruke*.)

Perjury, the offence of giving false evidence has been from the earliest times severely punished. The ancient Romans threw the perjurer from the Tarpeian Rock, and after the Empire was Christianized, those who swore falsely upon the Gospel had their tongues cut out. The usual punishment in England from the 16th to the 19th century was the pillory, fine, and imprisonment. It is now punishable by imprisonment.

Pennsylvanian Formation, a group of rocks lying between the Trias and the Carboniferous strata. It has three subdivisions, Upper, Middle and Lower Pennsylvanian, all of which are rich in fossil deposits.

Perpetual Motion is a problem that has engaged the ingenuity of many inventors, known and obscure, including George Sturgeson and Arkwright, both of whom struggled with the idea until convinced of its impracticability. There are even yet people who imagine that a machine that will possess within itself the power of supplying its own motion is among the inventive possibilities.

Peruke, the name given to the wig worn by men in the 17th and 18th centuries, and up to the end of the first decade of the 19th century. Perukes did not make their appearance in England until about 1600, and during the Restoration period were of great length, falling upon the shoulders. They gradually diminished in size until they disappeared altogether.

Peruvian Bark. (See *Cinchona*.)

Peseta, a Spanish silver coin worth about 9d.

Pessimism, the theory, as taught by Schopenhauer, that this is the worst of all worlds, and that it is better to sleep than to wake, and to die than to sleep. The term is also generally used to express a tendency to look upon the dark side of things.

Pestalozzi's System concerns itself with the education of poor children in reading, writing, and practical industrial employment, and was founded by Johann Pestalozzi in 1775. Although it was not successful in Pestalozzi's time, it has been improved and developed on prosperous lines since the philanthropic Switzer's demise.

Petard, an instrument of war, invented in the 15th century, consisting of a metal cylinder which was filled with gunpowder, and fired at gates or barriers to blow them up. It is now obsolete.

Peterloo Massacre, a result of a conflict between the military and a large concourse of people assembled at a Parliamentary Reform meeting held on August 10th, 1819, on St. Peter's Field, Manchester, involving the loss of many lives.

Peter's Pence, an annual tribute paid in former times to the Pope, said to have been at first a voluntary offering by the king to the West Saxons, and amounting to a penny a year levied on all families owning land of the annual value of 3s. The tax was continued down to the reign of Henry VIII., by whom it was abolished. It is still customary to call contributions sent to the Pope "Peter's Pence," but nowhere are such payments enforced to-day.

Peter's, St., at Rome, as it at present exists, was built in the 16th and 17th centuries, the first stone being laid by Pope Julius II. in 1506, and completed and consecrated in November, 1626. The dome was designed by Michael Angelo, and Raphael was employed for a time in decorating the building. The length of the Cathedral is 669 feet; it has a breadth of 442 feet at its widest point, and its highest point is 432 feet from the ground.

Petito Principii, a line of argument which assumes the conclusion aimed at as a proved fact.

Petition of Rights, passed in the reign of Charles I., June 7th, 1628, contained the important proclamation that no freeman should be compelled to pay taxes except by and down by Act of Parliament; that none should be illegally imprisoned; that soldiers and sailors should not be billeted on private persons; and that commissions should no more be issued for punishing by Martial Law.

Petrel, an ocean bird of great power of wing, common in the Southern Ocean, and, as regards some of its species, a visitor to the northern parts of the British Isles. The Stormy Petrel, Fulmar, or "Mother Carey's chicken," breeds in Britain. The birds pass most of their time far out at sea.

Petroleum, a hydrocarbon occurring in petroleum; petroleum, so largely employed in motor propulsion nowadays, is a mixture of mineral oils, specially prepared, and is found naturally, in one form, as the liquid constituent of asphalt.

Petroleum, the most abundant of inflammable mineral oils; during the last fifty years produced in

enormous quantities in North America and Mexico, and in various parts of Europe and Asia. Previous to 1850, when a system of refining was discovered that enabled it to be utilised as an illuminant, it was not of much commercial value. The adoption of oil for railway and shipping purposes—and especially for ships of war—is exercising a great influence upon the oil industry. In 1912 the world's petroleum production was 53,000,000 metric tons, the United States contributing over 30,000,000 tons, Russia, 9,200,000 tons, and Mexico, 2,226,666 tons, the last-named country showing an increase of upwards of 300 per cent.

Pfennig, a German copper coin, worth $\frac{1}{4}$ of a penny, $\frac{1}{100}$ part of a mark.

Phalanx, a name applied by the ancient Greeks to a body of troops drawn up in close array, with overlapping spears, and eight, ten, or more rows deep. The Macedonians stood sixteen deep. A Greek phalanx consisted of 8,000 men.

Petty Officers in the navy correspond with non-commissioned officers in the army.

Pewter, an alloy of tin and lead, and sometimes, as in Britannia metal, of tin, copper, and antimony.

Pharmacopoeia, the authorized book of formulae for the preparation of medicines, published by the General Council of Medical Education and Registration of the United Kingdom. Each country publishes a similar book.

Pharos, the name of the first lighthouse, built by Ptolemy I., 283 B.C., on the Isle of Pharos, at the entrance to the harbour of Alexandria. It was 460 feet high, and one of the "seven wonders."

Pheasant, a familiar bird of the Galline order allied to the jungle fowl and turkeys, and comprising some 15 species. Pheasants came from Western Asia, and of beautiful plumage, and bred for game.

Phenyl, an organic radical, found in carbolic acid (phenol), benzole, and aniline.

Philippics, the orations delivered by Demosthenes, 350-341 B.C., against Philip of Macedon—remarkable for their acrimonious invective—since when similar discourses have been styled philippic.

Phillipsite, a mineral found chiefly in old igneous rocks, and formed of silicate of aluminium, calcium, and potassium.

Philology, the study of the literary memorials of different nations. Comparative Philology is more strictly the science of language, in its various forms; origins, laws, and alliances.

Philosopher's Stone. (See *Alchemy*.)

Philosophy, as defined by Sir William Hamilton, is "the science of things divine and human and the causes in which they are contained; the science of effects and their causes; the science of sufficient reasons; the science of things possible . . . the science of science; the science of the absolute." The greatest minds of all ages have engaged in philosophical speculations, and many systems and theories have been evolved. (See the various subject and name headings.)

Phlogiston, a term invented by Stahl to describe "the inflammable principle" as distinguished from fire in action. Stahl's theories placed the phenomena of combustion on an adequate basis.

Phoenix, a fabled bird of great beauty, which, after an existence of five or six hundred years in the wilderness, was said to have made its own funeral pyre, set it aflame with the fanning of its wings, perished, and afterwards sprung into new life and youth from its own ashes.

Phoenix Clubs, for the spread of rebellious propaganda, were established in various parts of Ireland in 1858-9, and many arrests were made. Of the persons brought to trial, however, only one received punishment, Daniel Sullivan, who was sentenced to 10 years' penal servitude.

Phoenix Park, the great public park of Dublin, 1,800 acres in extent and containing the Vice-Royal Lodge. It was in this park that Lord Frederick Cavendish was assassinated in 1882.

Phonograph, an instrument for reproducing sounds, and consisting of a wax cylinder, rotated by clock-work or by a handle, and having a mouthpiece into which a person speaks. As the voice reaches the

cylinder the vibrations are recorded on the wax, from which what has been spoken into the mouth-piece can be afterwards reproduced as required.

Phonography, a system of shorthand introduced by the late Sir Isaac Pitman in 1837, and since greatly developed.

Phosphorus was discovered by Brandt in urine in 1669. It is found, more or less, in most animal and vegetable tissues, and in most minerals. It is an essential element of all plants and of the bones of animals, and is now chiefly obtained from bones. In combination with various metals it forms different phosphates, which are largely utilised as manures. The chief commercial use of phosphorus, however, is in the preparation of lucifer matches.

Photography has been known in regard to its general principles since the days of the alchemists, who discovered that chloride of silver turns black on exposure to light. Wedgwood had some success in chloride of silver experiments, but it was not until 1826, upon the discovery of Daguerre which introduced the photographic camera, that any great practical results were obtained. This discovery produced the daguerreotype. A few years later Talbot patented the calotype, by which photographs were obtained on paper treated with a solution of silver iodide in potassium iodide, and the negative was arrived at. Since then the development of photography has proceeded with remarkable success, improvement on improvement having been introduced. Colour photography is a subject that engages the attention of many experimenters, and some promising results have been obtained. (See *Pears' Dictionary of Photography*, pp. 925-946 of this volume.)

Photometer, an instrument, of which there are various forms, for measuring the intensity of light. The photometers of Bunsen and Rumford are in most general use.

Phrenology, the so-called science of the skull and brain propounded by Dr. Gall, along with Spurzheim, in 1800-12. It has still many adherents, but few scientists of established reputation have accepted it as based on adequate principles.

Phrynosoma, a genus of horned lizards, allied to the molochs and to the toads or frogs, averaging some five inches in length and abundant in Texas and the southern parts of the United States. The peculiar feature of these animals is that they have numerous hard spines on their heads. They are frequently kept as pets.

Phylactery, an amulet or charm worn about the person and supposed to have a protective influence over the wearer.

Phylloxera, a kind of plant lice which attack the grape vine, and in some years cause great devastation in the vineyards.

Physicians, Royal College of, was constituted in London, in 1582, Dr. Linacre, physician to Henry VIII. and the projector of the College, being its first President. The present College in Trafalgar Square was erected about 1825 from designs by Sir R. Smirke.

Physiognomy, a so-called science which claims to interpret the temperament and disposition of people from the features of the face. Aristotle and Cicero studied the subject, and from the 16th century to recent times it has had many expounders, the chief of whom was Lavater, whose investigations, as set forth in his "Fragment," published in 1776, were of extreme interest. Physiognomy cannot, however, be classed with accepted sciences; though most people believe in it to a certain extent.

Physiology, the science of the structure and functions of animal and plant life.

Pianoforte is claimed as an invention for a French instrument maker named Marius, a German organist named Schroeter, and an Italian named Cristofaeli, working independently of each other, in the 18th century. It proved to be much superior to the harpsichord, which it superseded, inasmuch as the strings of the latter were struck by quills, while those of the pianoforte were struck by small hammers. Pianofortes were introduced into England about 1760, and a German named Zumpt was making

them in London in 1766. The most eminent English makers have been Broadwood, Collard, Kirkman, Brinsmead, etc., and among the leading makers of France and Germany are Erard, Pleyel, Bechstein, etc. Upright pianos were introduced about 1800, and "cottage" pianos about 1820. The other kinds are the Grand, the Semi-Grand, and the Square pianofortes, all, however, worked on the same principle.

Plastre, once a common Spanish silver coin worth 4s. 3d. English. The name of plastre only applies to-day to certain coins of low denomination in Turkey and Egypt.

Ploquet, a card game invented by Joquemin for the diversion of Charles VI. of France when in ill-health about 1390.

Picts, inhabitants of Scotland in pre-Roman times, are held by some historians to be a branch of the old Celtic race, by others to have been of Scythian origin. They occupied the Lowland portion of Scotland, and were subdued by the Scots in the 9th century, Kenneth II. becoming king of the whole of Scotland.

Pictures of Great Price. The costliest picture in the British National Collection is Holbein's portrait of the Duchess of Milan, which has been exhibited there on loan from the Duke of Norfolk for nearly 30 years, and became the nation's property for £72,000 in 1909. The next costliest is the "Ansdai Madonna" of Raphael, bought in 1885 from the Duke of Marlborough for £70,000—equal to upwards of £14 per square inch. Ruskin spoke of it as "quite the loveliest Raphael in the world." It has been valued by the Director of the National Gallery at £115,500, and Mr. Gladstone was wont to find satisfaction in having saved the taxpayers £45,500 in this purchase. The Rokeby Venus (Venus and Cupid) was bought for the National collection in 1908, for £40,000. Titian's portrait of Anosto was acquired for the National Gallery in 1904 from Sir George Donaldson for £30,000. Other costly acquisitions include Van Dyck's "Charles the First" (£17,500), Holbein's "Ambassadors," Velasquez's "Admiral Pulido-Pareja," and Moroni's "Italian Nobleman" from Longford Castle, which together cost £55,000—£30,000 of which was derived from private gifts. Prices at the regular and private picture sales have attained extraordinary figures at many recent sales. The Duveen paid £11,370 for Romney's portrait of Lady de la Pole, for which, with a companion picture of her husband, the artist received only 100 guineas. Raeburn's portraits have also realised extraordinarily high figures in recent years.

Pier, a projecting embankment, wall, wharf, quay, or landing place, now to be found at most sea-coast towns. One at Southend, Essex, is over a mile in length, and the Southport Pier on the west coast is almost as long. Their use is to break the force of the wind in 1862 to facilitate the formation, management and maintenance of piers and harbours in Great Britain and Ireland.

Pietists were a body of religious reformers, who, under the leadership of Spener, a Leipzig professor, spread themselves over Germany in the 17th and 18th centuries. Although guilty of some extravagances, they were zealous in their aims, and did good work in promoting the practical side of religion.

Pig, the popular name for a hog or swine, applied to both sexes, though, when making distinctions, the mature male is styled a boar and the female a sow.

Pike, a familiar fresh-water fish abundant in the temperate regions of both hemispheres. It forms good sport for the angler in our rivers and lakes, and sometimes attains a weight of from 20 lb. to 30 lb. It is extremely voracious, is covered with small scales, and has a ferocious-looking head.

Pilchard, a fish of the herring family, but with smaller scales and more rounded body. It appears off the Cornish coast in vast shoals every summer.

Pilgrimages, the undertaking of a journey to a distant place or shrine, to satisfy a religious vow or secure spiritual benefit, were resorted to in early Christian times. The first recorded pilgrimage is

that of the Empress Helena to Jerusalem in 326. In the Middle Ages they became common, and were undertaken by monks and people of rank in all Christian countries. The Mahomedans have been making pilgrimages to Mecca since the death of the Prophet, such duty being enjoined by the Koran. In recent years Roman Catholic pilgrimages to Lourdes, La Salette, and other places have drawn large numbers of the devout.

Pilgrim Fathers, the 74 men and 28 women, all English Puritans, who, after living some years in exile in Holland, to escape persecution in their own country, set sail from Southampton on August 15th, 1620, for America landing at Plymouth Rock on December 25th of that year. They founded the settlement of Plymouth, and are regarded as the pioneers of American colonisation, although 12 years earlier a small Virginian colony had been established.

"Pilgrim's Progress," Bunyan's famous allegory, written in Bedford gaol. The first part was issued in 1678. It is the greatest work of its kind, and has gone through hundreds of editions.

Pillory, a wooden instrument of punishment in use in England until 1837. It consisted of a pair of flat boards with holes through which the culprit's head and hands were put, and was usually erected on a scaffold. While a person was undergoing this punishment the mob generally pelted him with stones and rubbish, sometimes to his serious injury. People convicted of forgery, perjury, or libel were often condemned to the pillory, but from 1815 to 1837, when the pillory was abolished, the only offence for which it could be inflicted was perjury.

Pinchbeck, an alloy (25 per cent. zinc, 75 copper) introduced by a London toy-seller named Pinchbeck in the 18th century, and largely used for the making of watch cases and other articles where cheapness was desired. It was intended to imitate gold.

Pine, a coniferous tree that flourishes in most northern latitudes, and including many species, all of which afford valuable timber, and yield turpentine and tar. The "Scotch fir" is the only species native to Britain.

Pinnacle, a pointed, spire-shaped structure rising above the roof of a building, serving mainly as ornament, but also of use in giving firmness to the part it rests on. Pinnacles are found in nearly all styles of architecture.

Pins were in existence, no doubt, in prehistoric times, and have been unearthed in British barrows. Brass pins were introduced into England from France about 1540, and were being made in this country three years later. They were manufactured by machinery in England in 1824.

Pipa, a species of toad inhabiting Guiana, and not found elsewhere. It is of considerable size, and is remarkable for the fact that the female carries on its back the eggs of its young until they are hatched, herself depositing them in that position. Generally known as the "Surinam toad."

Pipe-fish, an eel-like fish with an elongated snout resembling a pipe. It is common in British waters, and there is an American species. In many places it is called the "sea horse."

Pistole, the name originally given to a Spanish gold coin, worth about 26s. sterling. Other countries—France, Italy, Germany—also adopted the name, and altered the value.

Pistols, small firearms, were invented at Pistoia in Italy, and were adopted by the English cavalry in 1544. At the present day pistols are mostly of the revolver pattern.

Pitcairn Islanders were originally the mutineers of the *Bounty*. They took possession of the island in 1790, and it was not until 1814 that their whereabouts was ascertained, accidentally, by a passing ship. The mutineers, under their leader, Adams, had settled down to a sort of communal existence, married black women from a neighbouring island, and increased so in numbers that in the course of years there were too many for the island to support, and in 1836 they were removed by the British Government to Norfolk Island. (See **Norfolk Islanders**.)

Pitch-blende, a very scarce mineral, which has been much talked about recently because of its being

the source of radium. Scientifically, it is an oxide of uranium, and is of black or brown colour. It occurs in masses with ores of lead, silver and tin, in the latter connection being found in Cornwall, Saxony, Bohemia, and Hungary also yield it in lead and silver veins, while small quantities have been found in some parts of the North American continent.

Plack, an old Scotch coin of the 15th and 16th centuries, and of variant value.

Plague, the name given to a terribly fatal epidemic which spread over Europe and devastated England at different periods between the 10th and the 19th centuries. The most serious of these visitations were those of 1471, 1478, 1485, 1506, 1507, 1528, 1551 and 1664 (the Great Plague of London).

Plaice, a familiar British sea-fish, of the flounder family, largely used as food and of fair quality, though not reckoned equal to soles.

Plaid, a comprehensive garment or tartan of woollen material checked and coloured in distinctive markings for different Scottish clans, and worn by women as well as men.

Plain-Song, a style of musical composition sung in unison, familiar in the churches of the West from very early times, and still largely used, especially in the Roman Catholic services.

Planets, the name given to such celestial bodies as revolve round the sun in elliptical orbits. The name was first used by the Greeks to indicate their difference from the fixed stars. There are nine primary planets, Mercury, Venus, the Earth, Mars, Jupiter, Saturn, Uranus, Neptune, and the Asteroids.

Plan of Campaign, the name given to the agitation, at its height in Ireland about 1887, the object of which was to compel landlords to reduce their rents. These proceedings were adopted in connection with the National Land League and gave rise to much disturbance. The Pope condemned the "Plan of Campaign" in 1888.

Plantagenets began to reign in England with Henry II., in 1154, and extended to Richard III., who was killed at the Battle of Bosworth Field in 1485. There were in all 14 Plantagenet Kings.

Plantigrade, the scientific name for such *Carnivora* as walk with the sole of the foot flat to the ground, such as the bear, badger, racoon, etc.

Planchy, Battle of, was fought between the British, under Clive, and the Indians under Suraja Dowla on June 23, 1757. The British had a force of only a few thousand men, but gained a decisive victory over an army of 68,000.

Plate, the term applied to gold, silver, or plated-ware, such as spoons, knives, forks, dishes, cups, etc. (See **Goldsmiths' Company**.) In recent times it has been the custom to include under the term articles of the base metal, covered with a thin coating of silver, and differentiated as "electro-plate."

Platinum, a scarce white metal generally alloyed with iridium, osmium, ruthenium, and palladium. It can only be melted in an oxyhydrogen or electric furnace, but can be rolled out into a film-like sheet, or drawn out to the finest wire.

Plebeians were the ordinary citizens of Rome as distinguished from the Patricians. Inter-marriage between the two classes was prohibited.

Pleiades, the name applied to the Seven Stars of the Taurus constellation, and really comprising, when viewed through a powerful telescope, many thousands of stars.

Plough Monday, the day on which in olden times the rustic population returned to their regular labours after the Christmas festivities. It falls on the first Monday after the Epiphany.

Plover, a well-known wading bird, widely distributed over the marshy places of Europe, and a familiar object in many parts of Britain.

"Plug" Riots were frequent in the manufacturing districts of the North of England about 1844, when there was great distress among factory workers. The rioters attacked mills and by drawing the plugs from the boilers, stopped the machinery.

Plume, strictly a feather, but often worn as a military head adornment consisting of a tuft of

- feathers.** Any ornamentation of this description is now styled a plume.
- Pluralism,** a term in Ecclesiastical Law denoting the holding of more than one benefice by one person at the same time. This was much indulged in formerly, but is now expressly prohibited.
- Plymouth Brethren,** a Nonconformist sect founded about 1830 by Mr. Darby. They are not at great variance with other Protestant churches, recognise no order of ministers, and receive into communion all who acknowledge Christ. They possess over 100 chapels in England and Wales.
- Pneumatic Despatch,** a method of parcel forwarding, by means of compressed air, through a tube or along an enclosed railroad. The experiments hitherto made in this direction have not been particularly successful on a very extensive scale, but it seems probable that pneumatic despatch will be ultimately widely adopted. Already the system is satisfactorily at work in connection with the short-distance transit of letters, packets, etc.
- Poet Laureate** is an office that dates from a very early period. There was a Versificator Regis in the time of Henry III. Chaucer held the office in the reign of Richard II. Skelton was Poet Laureate under Henry VIII.; Spenser held the post in Queen Elizabeth's time; Ben Jonson also held it. Dryden was Laureate from 1690 to 1700. In the 19th century the Poet Laureates were Southey, Wordsworth and Tennyson. Mr. Alfred Austin was Poet Laureate from 1896 to his death in 1933, when Mr. Robert Bridges succeeded to the office.
- Poitiers, Battle of,** was fought on September 29th, 1356, when Edward the Black Prince gained a complete victory over John, King of France, who was taken prisoner and brought to London.
- Pointer,** a well-known sporting dog of Spanish origin known in this country from about 1688. The remarkable feature about this dog is that when it sees game it stands still and points with its up-lifted foot in its direction.
- Polar Medal,** for service in the Polar regions, was first granted to the officers and crew of the *Discovery*, in recognition of the success of their enterprise in the South Polar regions.
- Pole-cat,** an animal of a dark-brown colour, averaging about 18 inches in length, exclusive of tail. It is carnivorous and belongs to the weasel family. Like the skunk, it has the power of emitting a most offensive odour.
- Pole-star** is of the second magnitude, and the last in the tail of the Little Bear constellation. Being near the North pole of the heavens, it always remains visible in the Northern hemisphere; hence its use as a guide to seamen.
- Police** of one kind or another have existed from the earliest times. There was a London watch in the 13th century, and its members were increased and its jurisdiction extended from time to time until the early part of the 19th century, when an improved police system was established. This system was introduced by Sir Robert Peel (then Mr. Peel), and in 1839 it was extended to other parts of the country. London has about 23,000 police, with 344 horses, and the total number in England and Wales is about 33,436, exclusive of City of London and Metropolitan Police; Scotland has 5,831; and Ireland, 11,871. The Metropolitan and City of London Police cost about £3,000,000 a year, and the cost of the county and borough police in England, Wales, and Scotland outside of the metropolis, is over £2,000,000 annually.
- Political Geography** deals with the subjects of political power and its distribution among nations, having regard to population, productive capacity, social features and methods of government.
- Polka,** a dance that was introduced into England from Bohemia in 1843, and won great popularity. See *Pears' Dictionary of Sport and Pastimes*.
- Poll Tax,** a tax levied on every adult—every head or poll—was first imposed in England in 1380, and led to the "Peasants' Revolt," headed by Wat Tyler. It was re-imposed in 1520, and again by Charles II., but abolished by William III. in 1689.
- Polo,** an interesting game which has been well styled "hockey on horseback," and seems to have existed in the East for a long period. See *Pears' Dictionary of Sport and Pastimes*.
- Polyandry,** a kind of domestic existence which allows a woman a plurality of husbands. It only prevails in a few remote communities, in some parts of India, Ceylon, and Tibet, and among certain savage tribes.
- Polythalamism,** the doctrine of plurality of Godheads.
- Polyzoa,** the name given to a class of molluscs living in aggregated masses, and having the appearance of moss. They are diverse in form, of very primitive structure, and the reproductive organs of both sexes are present in the same individual.
- Pomace,** the name given first to the pulp of apples and other fruit after pressing—as in cider-making; and later to fish refuse after the oil has been compressed from it. The latter is then exposed to the sun and in its dried form constitutes fish guano.
- Pomander,** the name given to a small ball or box which was formerly carried suspended from the neck or girdle, and contained perfumes and spices which were supposed to be a protection against infection.
- Pomology,** the science of fruits, treating of the cultivation and properties of fruit trees and fruit-bearing shrubs.
- Ponard,** a stabling weapon somewhat larger than a dagger; very commonly carried about the person by Spaniards and Italians of the 16th and 17th centuries, but never much in vogue in England.
- Pontifex,** the title assigned in ancient Rome to members of the chief College of Priests, whose duties were of a general kind. The "pontifex maximus" was the chief religious officer of the State.
- Pontoon,** any temporary floating structure that forms part of a bridge across a river. Pontons are in various forms, mostly cylindrical and hollow, others take the shape of deck-boats locked together. Pontoon bridges capable of supporting railways are a feature of modern military equipment.
- Poodle,** a well-known variety of domestic dog, having a thick curly coat which in France it is the custom to cut close on the lower part of the body. It is an exceptionally intelligent animal, capable of being taught many tricks.
- Pope (The),** the head of the Roman Catholic Church; his "Infallibility" is an article of faith; he is elected by the body of Cardinals; since 1871, when the King of Italy deposed the holder of the office from temporal power, no Pope has left the Vatican between appointment and death.
- Pope Joan,** a favourite card game of the 18th century. See *Pears' Dictionary of Sport and Pastimes*.
- Poplin,** a favourite fabric composed of silk and worsted, and now chiefly manufactured in Dublin. The industry was first introduced into this country from France by Huguenot refugees in 1693.
- Poppy Oil,** a fixed oil obtained from the seeds of the opium-poppy, and used as a food, for illumination, and in a certain class of soap-making.
- Population of the British Empire**—The British Empire—according to the most recent returns, number—417,148,000 persons, 45,370,530 of whom are resident within the United Kingdom—England and Wales, 36,070,492; Scotland, 4,760,904; Ireland, 4,300,219; Islands, 148,915. The population of the principal Dominions and Colonies is as follows—
- | | |
|-------------------------|-------------|
| India | 315,132,537 |
| Australian Commonwealth | 4,805,805 |
| New Zealand | 1,070,910 |
| Canada | 7,506,849 |
| Natal | 1,194,043 |
| Cape Colony | 2,564,905 |
| Transvaal | 1,686,012 |
| Orange Free State | 528,174 |
| Rhodesia | 1,600,000 |
| Uganda | 2,993 |
| Northern Nigeria | 6,000,000 |
| Southern Nigeria | 8,000,000 |
- Porcupine,** a peculiarly constructed rodent whose back is covered with long, sharp, black and white spikes, which form a powerful means of defence. There are two species—the Common Porcupine.

which is found in Southern Europe and Northern Africa; and the Tree Porcupine, which is restricted to the American continent.

Porphyry, a form of crystalline rock of many varieties that in ancient Egypt was quarried and used for the decorative portions of buildings. The term is now applied generally to the eruptive rocks of the porphyritic class.

Porpoise, a marine fish of the dolphin family, and a common inhabitant of northern seas. Porpoises travel in shoals, their progression being marked by constant leaping and plungings. Their average length is from four to five feet.

Port, a special kind of red Portuguese wine, taking its name from Oporto. It was little known in England until the Methuen Treaty of 1703, when it was permitted to be imported at a low duty.

Portcullis, a strong, movable timber or iron grating let into the wall of the gateway to a feudal castle, and capable of being lowered or raised at will. It formed an effective protection against attack in days anterior to firearms.

Porter received its name from the fact that it was first drunk by porters in London. (See **Beer**.)

Portland Cement is a mixture of about 20 parts of clay with 80 parts of chalk, specially prepared in kilns, and forming a substance which, after admixture with water, will harden and solid.

Portland Vase, one of the most renowned specimens of Greek Art, long in the possession of the Portland family. In 1800 it was placed on loan in the British Museum, and in 1845 was smashed to pieces with a stone by a man named Lloyd; but, having been cleverly restored, it is now exhibited in the Jewel room. It was discovered in the 16th century near Rome in a marble sarcophagus, and is supposed to have been the cinerary urn of some Imperial personage. It was purchased from the Barberini family in 1790 by the Duchess of Portland. The vase stands about 10 inches high, and is ornamented with figures in white enamel on a dark blue ground.

Portreeve in olden times was an official appointed to superintend a port or harbour, and before the name of mayor was used the chief magistrate of London was styled the Portreeve.

Porzana, the name given a bird of the rail family. In England it is commonly called the crane.

Positivum, a system of philosophy propounded by Auguste Comte, rejecting all metaphysical conceptions; a species of utilitarianism.

Posse Comitatus, an old legal term designating all available people in a county, between the ages of 15 and 70, liable to be called upon to aid the sheriff in asserting the power of the law.

Post Impressionism, Cubism, and Futurism embrace three latter-day art movements which, to some extent, represent the barbaric in artistic expression. The Post Impressionists regard drawing as secondary to beauty of paint, and leave the artist to scatter his colours as may best convey his impression. The Cubists and Futurists go still farther, and aim at realising, by a series of chaotically-placed colours, the pictorial idea in the mind of the artist. While to the lay onlooker all three movements signify little that is understandable, to their devotees they indicate a healthy desire to break away from old conventions.

Post-obit is a bond given for a loan undertaking to repay the lender the sum borrowed, with interest, after the decease of another person from whom he expects to receive money.

Post Office. A post office system of a kind has existed for centuries, but after the introduction of railways postal administration assumed special magnitude. With the penny postage system, inaugurated by Sir Rowland Hill in 1840, the modern post office era may be said to have commenced. In 1836 the Post Office began to handle money for the public by establishing the Money Order Department. The Post Office Savings Bank followed in 1861, and Postal Orders were introduced in 1886. Since 1870 the telegraph has been owned by the State, and the Post Office Telephone system was established in 1894, although the National Telephone Co.'s system was not fully combined with the Post

Office Telephone service until January 1, 1922. With a largely augmented business and increased facilities there has been a lowering of rates, the 6d. telegram dating from 1880, and 1d. per 4-oz. inland letter postage rate from 1897. The Parcel Post was inaugurated in 1881. Post Office work is always increasing. Some five thousand three hundred million postal packets (letters, postcards, newspapers, parcels, etc.) are delivered in the United Kingdom in the course of a year; and in the same period are issued about 20,625,000 inland money orders, representing over £40,000,000; about 4,000,000 foreign and colonial orders of the value of nearly eleven millions sterling; while postal orders are issued to the number of 132,366,000, and the value of over £30,000,000. There is nearly £170,000,000 invested in the Post Office Savings Bank. Nearly 100,000 telegrams are sent in a year. There are over 24,000 post offices in the United Kingdom, employing nearly 212,814 persons of whom 45,741 are women. A new General Post Office has been built on the old Christ's Hospital site in Newgate Street, at a cost of £320,000. (See **Telegraph, Telephone**.)

Potassium, a metal discovered by Sir Humphry Davy in 1807, and now generally obtained by the ignition of a mixture of charcoal and potassium carbonate. It is one of the most potent of reducing agents. It is a common constituent of numerous rocks, and its compounds are found in many soils and vegetable and animal tissues. Among its chief compounds are nitrate or nitre, caustic potash, etc.

Potoroo, a marsupial animal so like the kangaroo in shape and movements as to be called the kangaroo rat. They live on roots, and are found only in West Australia and Tasmania.

Potstones, large pear-shaped flints discovered from time to time in the chalk formation, and supposed to be the fossils of large sponges.

Pottery was made in prehistoric times, as the numerous fossil evidences testify. Under the ancient Egyptians, great skill was attained in this art, and all the early civilised peoples devoted themselves with success to pottery production. In the Middle Ages the Italians, Germans, Flemings and Dutch made great progress in pottery developments, bringing into use enamels and glazes. Delft, in Holland, introduced a class of earthenware in imitation of porcelain, which was in great vogue throughout Europe for a considerable time. In France, Bernard Palissy produced the famous enamelled ware which bore his name, and a little later the English Staffordshire potteries came into prominence, and attained great prosperity and high artistic realisation under Wedgwood. Among the other great centres of pottery and porcelain production may be mentioned Dresden and Sévres. In England, in addition to the Staffordshire potteries, successful manufactories have been established at Chelsea, Derby, Worcester, Coalport, and Colebrook Dale; while in the Far East the Japanese and Chinese have always been famed for their productions of beautiful ware.

Pot-Walloper, the name applied to certain electors who, prior to the Reform Act of 1832, were permitted to receive the franchise on producing proof that they had, as the phrase went, "boiled their own pot" in the constituency during the six months preceding an election.

Poullet Peers's Claim was the claim of William Thomas Poullet to the Poullet earldom. The claimant used to wheel a street organ about bearing a placard with the inscription "I am Viscount Hinton, son of Earl Poullet." The House of Lords pronounced against him, and he died in a workhouse in 1909.

Poultry Computer was one of the old London City prisons, and stood in what is now called the Poultry. The Poultry Chapel was built on the site of the Old Computer in 1819.

Prado Gallery, the great public picture collection at Madrid, containing a superb collection of paintings by Velázquez, Murillo, Raphael, Titian, Dürer, Van Dyck, Rubens, Holbein, etc.

Presumptive, a legal term applied to any offences calculated to interfere with, or cast contempt upon

the prerogative of the Crown. The law against this, at first intended to prevent the encroachments of papal power in England, was passed in 1306.

Prætorian Guard, a permanent bodyguard established by the Emperor Augustus, and employed down to the time of Constantine.

Prairie Dogs are common rodents in Western America, and very like the marmot in general structure. They live in communities in burrows.

Prawns, crustacean animals allied to lobsters, shrimps, and cray fishes. There are several species, but the best known is the edible prawn.

Prebendary, a clergyman who receives a prebend or stipend because of his special connection with a Cathedral or Cathedral Church.

Preceptors, College of, founded 1846 for middle-class teachers. Diplomas are granted for Associates, Licentiates, and Fellows. Professorship of the Science of Education since 1873.

Predestination, the Calvinistic doctrine that God from and to all eternity predestined everything to happen as it does, and must happen, even to the fixing of the souls to be rewarded and punished.

Præfæct, chief magistrates in Ancient Rome, and in the absence of the Chief of the State performed the functions of Government. In modern times the title is applied to the Chiefs of Administration of the Departments of France.

Prehnite, a translucent mineral of a pale green colour and crystalline in structure. It is a double silicate of aluminium and calcium, and is mostly found in old igneous rock formations.

Pre-Raphaelites, a school of artists formed about 1850, and including among its exponents Millais, Rossetti, Holman Hunt and others, whose ideal was absolute fidelity to Nature. For a time the school kept well together, but later modified their ideals, and exercised much influence upon art developments.

Presbyterian Churches. Foremost of these is the Church of Scotland, constituted at the Reformation, and to-day has over 800 ministers and licentiates, 1,446 parish churches and about 715,849 communicants. Its chief official is the Moderator, chosen annually, who ranks next after the Lord Chancellor; the Sovereign himself being represented by a Lord High Commissioner. The church organisation is controlled by Kirk Sessions, Presbyteries, Synods, and the General Assembly.—Among the other Presbyterian Churches are the United Free Church of Scotland (formed by a merging of the Free Church of Scotland and the United Presbyterian Church, effected in 1900), which has 1,779 ministers, 1,541 churches, and over 500,000 communicants; the Free Church of Scotland, representing such as were opposed to union with the United Presbyterian Church, and has 89 ministers and 280 congregations; the United Original Secession Church ("Auld Lights"), dating from 1733, and having 28 churches; and the Presbyterian Churches of England and Ireland. The two leading Scottish churches are very active in the foreign mission field, and commissioners and chaplains are selected from these bodies for ministrations to Presbyterian troops.

Press-Gang, a body of sailors employed to impress men into naval service, frequently resorted to in former times in England, especially during the war with France in the early 19th century, but not since.

Prester John, the name of a Christian ruler or priest of the Middle Ages. He was supposed to live in the interior of Africa.

Primer, the name given to a book of devotions, put forth by the Roman Catholic Church as the first book for children to read in schools.

Primogeniture, the right of the first-born male child to inherit the real estate of his father, in the absence of direction by will or deed to the contrary.

Primrose League, founded in 1883 to commemorate Lord Beaconsfield's political services and to promote the principles he advocated. The primrose is the Beaconsfield floral emblem, and each anniversary of his death, April 19th, is called Primrose Day.

Prinos, the evergreen oak, or Winterberry, a bush the leaves of which are sometimes used in America as a substitute for tea.

Printing by movable types was first practically utilised by John Gutenberg, at Mayence, about the middle of the fifteenth century, Fust and Schoeffer being associated with him. The invention is claimed for Gutenberg, and also for Laurence Coster of Haarlem. It was introduced into England by Caxton, who set up a printing press in Westminster in 1475. Gothic characters were first used, being superseded by Roman letters in 1518. The mechanism of the printing press was crude up to 1801, when the first iron press was invented by the third Earl of Stanhope. Steam printing dates from 1814, Mr. John Walter, of the *Times* newspaper, being the first to use the steam press invented by a German named König. This press printed 1,200 sheets per hour. Improvements were subsequently introduced by Applegarth and Cowper, and great strides were made in 1828 when the Hoe machine, which turned out 30,000 impressions an hour, was put on the market. Then came the Walter press which printed on continuous rolls of paper from curved stereotyped plates. In connection with printing the Linotype invention has been of great utility, and another and somewhat analogous machine contrivance is the Monotype.

Priories existed in this country from the 8th century, and were dependent upon the Abbeys. They were dissolved in England in 1534.

Privateers were ships of private individuals licensed in time of war to seize and plunder the ships of the enemy. In 1856, however, privateering was abolished.

Privy Council, of advisers to the Sovereign, has existed in England from early times. It comprises a large number of members selected from the most distinguished men in the Realm, and includes the Royal Princes and Archbishops, the principal Officers of State and of the Royal Household, and has a Lord President, who is appointed by Letters Patent. It grants Charters of Incorporation; but, generally speaking, its power is small in comparison with what it was in former times.

Protectionists, as a political party, derived their name from a society for the protection of agriculture established in 1814 in opposition to the Anti-Corn League, which had for its leader Lord George Bentinck from 1846 up to the time of his death in 1848. The society was dissolved in 1853. Notwithstanding this, Protection as a political policy has not ceased to have its adherents, and in recent years there has been a strong revival of the Protectionist idea in England, and the fiscal policy known as Tariff Reform, on the lines advocated by Mr. Chamberlain, has been adopted by the Unionist party, and proposes to bring into effect certain measures which, at all events to a retaliatory extent, would re-establish the Protectionist principle.

Protestant, as a denominational term, was first applied to the Lutherans, who, in 1559, protested against the encroaching power of papacy.

Proteus, a peculiar genus of amphibian newt found only in the subterranean caverns and lakes of Central Europe. It averages about a foot in length, and has a flesh colour; it is said that its blood coagulates in 15 times longer than those in human blood.

Protocol, a diplomatic term denoting the first draft of any important document to be used for political purposes.

Protogline, an Alpine variety of granite, some variations of which contain talc or chlorite.

Protoplasm, meaning the first creation of a thing, is a term applied to describe the substance which, under the right conditions, develops into organic life. Scientifically, protoplasm is defined as consisting of hydrogen, carbon, oxygen, and nitrogen in intricate combination.

Provost, a Scottish official similar in rank to an English mayor. The Provosts of Edinburgh, Glasgow, Aberdeen, Perth, and Dundee are styled Lord Provosts. The title of provost is also given to the heads of various English colleges.

Prosymite, a term used in the 17th century to indicate such as used leavened bread in the Eucharist.

Prud'hommes (Prudent Men), Councils of, were French trade tribunals, of masters and workmen, formed to decide on disputes. Such tribunals existed

in the Middle Ages at Marseilles and Lyons, and were formally revived in the latter city in 1806. Similar bodies exist in other parts of France.

Prunella, a kind of material once largely used for gowns of peasant women, and later utilised for the linings of women's shoes.

Prussic acid is a compound of nitrogen, carbon and hydrogen, and obtained by distillation of cyanide of potassium. It is probably the most poisonous of known compounds.

Psalms, *Book of*, believed to have been mainly written by King David; this part of the Holy Scriptures contains 150 separate compositions.

Psychical Research concerns itself with the investigation of such phenomena as are included in the terms mesmerism, psychology, and spiritualism. The Society for Psychical Research was founded in 1882, and has now about a thousand members.

Psittacine, a family of birds of the grouse class, mostly inhabiting the mountains of Scotland and other northern countries. It lives on Alpine and similar plants, and in the winter assumes a white plumage. The psittacine of our game shops are mostly of Norwegian species.

Psaroniæ, the name of a remarkable group of extinct flying reptiles, the fossil remains of which have been found in the rocks of the Lower Liass, the chalk of the Mesozoic epoch, and other strata.

Pomarine, a term applied to decaying animal or vegetable matter, usually of a poisonous nature.

Publicans, under the Roman Empire, were people who farmed the public taxes. It is this class of officials that is alluded to in the "publicans and sinners" phrase in the New Testament.

Public Schools in England include the following:—Bedford Grammar School (founded 1556); Birmingham, King Edward School (1552); Brighton College (1847); Charterhouse School, Godalming (1611); Cheltenham College (1841); Christ's Hospital, West Hove (1552); City of London School (1834); Clifton College, Bristol (1822); Dulwich College (1619); Eton College (1449); Eisted School (1554); Haileybury College (1829); Harrow School (1571); Malvern College (1895); Manchester Grammar School (1575); Marlborough College (1843); Merchant Taylors' School (1561); Mill Hill School (1897); Repton School, Derbyshire (1557); Rugby School (1567); St. Paul's School (1599); Sherborne School (1550); Shrewsbury School (1557); Stonyhurst College (1592); Tonbridge School (1553); Uppingham School (1584); Wellington College (1859); Westminster School (1560); and Winchester College (1382).

Puma, a carnivorous quadruped of South America, where it is called the "American lion," though much less in size than the king of beasts, seldom attaining a greater length than 40 inches, exclusive of tail, and a height of two feet.

Pumice, a light stone of variable substance, containing innumerable cavities which enable it to be utilised for cleaning purposes, for polishing, and for smoothing surfaces and edges of pasteboard and surfaces of wood, metal, and other material. It is imported from the Lipari Isles.

"Punch", the leading English humorous publication, was established in 1841, and has had among its editors Mark Lemon, Shirley Brooks, Tom Taylor, Sir F. Burnand, and now Mr Owen Seaman. Among its contributors it has numbered Thackeray, Douglas Jerrold, Tom Hood, Gilbert a Beckett, and its artists have included Richard Doyle, John Leech, Sir John Tenniel, Charles Keene, George du Maurier, Phil May, Linley Sambourne and Bernard Partridge. It adopted a party colour and cover in 1912.

Punt, a small, flat-bottomed boat, used for fishing and ferrying, propelled by pushing a long pole against the bed of a stream.

Purgatory, the place where, according to the Roman Catholic doctrine, the souls of the dead find temporary habitation while undergoing purification.

Puritans, the name originally given to the followers of Calvin in England in the time of Elizabeth, and afterwards applied to dissenting bodies generally, who took sides against the Stuarts and High Church party when Parliament was in civil conflict.

Pylon, the name given to the huge monumental gateways erected in front of ancient Egyptian temples or other public buildings.

Pyramids of Egypt, near Cairo, on the left bank of the Nile, are vast masses of brick or stone with inner chambers and subterranean entrances, dating from about 3500 B.C. The largest was built by Cheops, the Egyptian king, for his tomb, and there he was buried, 100,000 men being employed for 30 years upon it. This is called the Great Pyramid, and has a height of 480 feet, and in base is 764 feet square. It is supposed to have been originally enclosed in a marble casing. The brother and successor of Cheops erected the second pyramid, and the third was built by Mycerinus, a son of Cheops. The second and third Pyramids are considerably inferior in size to the Great Pyramid, though even they are of vast proportions. Much has been written about the Pyramids, one of the most informing books upon the subject being that of Richard A. Proctor, entitled *The Great Pyramids: Observatory, Tomb and Temple*.

Pyrenee, (See *Angles*).

Pythian Games were one of the four great Greek festivals in honour of Apollo and Diana, when contests of many kinds were indulged in and palms of Laurel branches were distributed as prizes. These games took place every fourth year near the temple of Delphi.

Python, one of the largest kind of snake, non-poisonous, and destroying its prey by crushing it. Some species average 30 feet in length, and prey upon deer and other small mammals. It is found only in the Old World.

Quack is one who pretends to possess medical skill for the purpose of making money. Although not so numerous now as in former times, quacks are still to be found in all countries and draw their victims from every class. There is nothing to prevent a man offering a remedy or a person taking that remedy in the ordinary course; but if fraud can be proved, or a quack does injury by what he persuades people to buy, he is liable to prosecution.

"Quad," the quadrangle, as of a college or gaol; hence the slang name quad (or "quod") for a prison.

Quadra is the name given to a square border enclosing a bas-relief, also a fillet or band in an Ionic base moulding, enclosing the scotia or hollow; also the plinth or lower member of the podium, in the Ionic style.

Quadragesima Sunday is the first Sunday in Lent, the fortieth day before Easter.

Quadrans-Muralis, a small northern constellation, with no large stars.

Quadrant, an astronomical instrument for measuring altitudes, superseded in modern times by the sextant. It consists of a brass arc of a circle 90 degrees in length properly graduated. There are numerous quadrants used in navigation.

Quadrille, adapted from an old French country dance, became fashionable in France and England in the early part of the 18th century. See *Pear's Dictionary of Sports and Pastimes*.

Quadron, the offspring of a white person and a half-breed or mulatto, representing three-fourths white to one-fourth black.

Quadrumanus, an order of mammals deriving the name from the fact of their being "four-handed"—that is, being able to use the hind feet as well as the fore feet as hands. To this order belong apes, monkeys, and lemurs. The term is not much used now. *Primates*, in later classifications, embracing the quadrumanous animals and also man.

Quadruped, the term applied to four-footed animals generally, irrespective of class or species.

Quadruple Alliance denotes the combination for defence or attack of four powers. The most noted have been those of England, France, Austria and Holland in 1718, to maintain the Treaty of Utrecht; and that of 1814, under which England, Austria, Prussia and Russia combined against Napoleon.

Quadruple Treaty, signed in London on the 22nd April, 1834, by the representatives of Great Britain, France, Spain and Portugal, for securing the Spanish throne to Isabella II.

Quarantor, an official appointed to guard the public treasure in ancient Rome. At first two Quarantors sufficed; then the number was increased to eight; and under Julius Cæsar there were 40.

Quagga, an African quadruped of the horse species, striped like a zebra on the neck and head, but not on other parts. It is now extremely scarce.

Quahog, a bivalve of the clam order, with large round shell, highly valued as a food. It is chiefly confined to the Atlantic coasts of North America.

Quail, a bird of the partridge family, of which only one species, the Common Quail, is found in England. It is not more than 8 inches long, and is an esteemed table bird. It is common in most of the warmer regions of the Old World, and there is a species in America to which the name is applied, but this bird does not strictly belong to the quail family. The peculiar dactylic call of the extremely pugnacious male bird of the Common Quail species has given rise to its popular rustic name "Wet-my-lips, Wet-my-feet," from a fancied similarity of sound.

Quale, an old name for a pamphlet, or little book.

Quakers, the popular name for members of the Society of Friends, a religious sect founded by George Fox about the middle of the 17th century. In matters of belief they do not differ materially from other Protestant bodies; the chief difference is in worship, Quakers having no prescribed formulas. They assemble in what they call their Meeting Houses, and any one in the congregation exhorts the assembly as he or she may be individually prompted. They duly speak, as the saying is, "as the Spirit moves them." Silent meetings are not infrequent. The ordinances of baptism and the Lord's Supper they reject. They object to swear upon oath, and up to 1833 were punishable by law for this refusal; since then they have been permitted to affirm. Until recent times they adopted great simplicity of attire, and in addressing people used the second person singular, but gradually have conformed more to common usage. Many Friends have attained distinction both in public life and in business, and as a body they are highly respected for their honourable dealings. William Penn was one of the most prominent of the early Quakers, and introduced the religion into America. The term Quaker was first applied to the sect because of the founder's frequent use of the word "Tremble" in his exhortations. The number of members of the Society of Friends in England and Wales is over 18,000, and in Ireland about 2,500.

Quære Impedit ("Why he hinders"), the title of a writ calling upon any person interfering with the rights of the owner of a presentation to a benefice to show cause why he impedes.

Quarrel, the old name for a dart or bolt, shot from a crossbow or catapult in war, before the employment of firearms.

Quart, a measure of capacity, a quarter of a gallon, two pints.

Quarter, a fourth part—as, a quarter in avoirdupois weight, that is 25 lb., a quarter of a hundredweight; eight bushels.

Quarter-Days in England are Lady Day (March 25th), Midsummer Day (June 24th), Michaelmas Day (September 29th), and Christmas Day (December 25th). In Scotland the legal terms are Whitsun (May 25th), Martinmas (November 11th); the conventional terms Candlemas (February 2nd) and Lammas (August 1st) make up the quarter-days.

Quartering, in heraldry, is the disposition of various escutcheons or coats of arms in their proper "quarters" of the family shield, in such order as indicates the alliances with other families.

"Quarterly Review," the great Tory quarterly, was started in 1809, in opposition to the *Edinburgh*, the Whig organ, established seven years earlier. Gifford was its first editor.

Quartermaster, a military officer charged with the provisioning and superintendence of soldiers in camp

or barracks, and holding the equivalent rank to a lieutenant. The Quartermaster-General is an officer who presides over the provisioning department of the whole army. A Quartermaster in the Navy is an officer charged with the steering equipment.

Quarter-sessions, a quarterly criminal court held by justices of the peace in counties and by Recorders in boroughs, having jurisdiction in minor offences, highway and Poor Law administration, etc. In Ireland quarter-sessions are held by county court judges. In Scotland a court of quarter-sessions is held in the county towns by the justices, who have power to revise sentences passed at special and petty sessions.

Quarter-staff, an old English weapon, consisting of a stout pole some 6½ feet long, which was grasped in the middle and could be swung with telling force in defence or attack. Combats with quarter-staves were frequent in Norman times and later.

Quartet, a musical composition in four parts, vocal or instrumental. String quartets, consisting of first and second violin, a viola, and a violoncello were most in vogue in the 18th century, and some of the finest instrumental music we possess was composed for these instruments.

Quarto, sheet of paper folded to make four leaves, or eight pages; usually abbreviated to "4to."

Quartodecimani, an early Christian community who celebrated the Paschal festival on the 14th day of the month, when the Jews celebrated their Passover. In consequence of the confusion caused, the practice of the Quartodecimani was condemned by the Council of Nice in 325.

Quartz is a common and usually colourless mineral, abundantly diffused, and occurring crystallised and massive. In the first form it is in hexagonal prisms, terminating in pyramids. When pure its specific gravity is 2.65. It is one of the constituents of granite, gneiss, etc. Among the quartz varieties are *rock crystal* (colourless), *smoky quartz* (tinged, as *yellow topaz*, *amethyst*, and *sapphire*), ordinary or false, *milky quartz*, and *rose quartz*. Quartz veins in metamorphic rocks often yield rich deposits of gold. Mining for gold in the rock is termed quartz-mining.

Quasi, a Latin term implying a somewhat false resemblance, and used as a prefix to other words.

Quassia, a genus of plants, of the Simarubaceæ order, with five-lobed calyx. There are two species, the most commonly known being a native of tropical America, the other of Africa. It yields a drug called bitterwood, much valued as a medicine. The negroes use it as a fever remedy. In commerce the product of the bitter-ash and other allied trees is generally substituted for quassia.

Quaternary Deposits, or Post-Tertiary, are the latest stratified rocks of the earth's crust, and include the Glacial, post-Glacial, and Keokuk systems.

Quaternions, a mathematical method invented by Sir William Rowan Hamilton, based upon mental transference or motion by vectors, four numbers being involved; hence the name. The system, though intricate, is of great use in the solving of problems in solid geometry.

Quatre Bras, Battle of, was fought in the Belgian village of that name two days before the battle of Waterloo (June 15, 1815). It resulted in the defeat of Ney's army by the British and their allies.

Quatrefoil, in architecture an ornament, piercing, or panel, resembling the four petals of a cruciform flower, largely used in the English Perpendicular style, and less frequently in the Decorated.

Quattrino, an Italian coin of about the value of an English farthing.

Quaver, a note of music, equal to one-eighth of a crotchete, or one-fourth of a minim.

Queen, a female sovereign. The first queen of which there is historical record is said to have been Sebekneferura, of the 12th Theban dynasty, who reigned about 1650 B.C. The queens of England have been Mary I., who reigned 4 years; Elizabeth (43 years); Mary II. (jointly with William III.) (6 years); Anne (23 years); Victoria (63 years).

Queen Anne's Bounty, a fund established in the reign of Anne (1704) for augmenting small church livings and aiding in rebuilding parsonages, etc. Its income is derived from tithes, Parliamentary grants, and private gifts, the latter in 1911 amounting to £50,590, in respect of 159 livings, and the benefactions received to £18,987. The governors of the Bounty hold securities to the value of £7,380,000.

Queen Anne's Farthings are supposed to fetch very high prices, but ordinarily they are not worth more than $\frac{1}{4}$ each. Those with the emblematic design of "Peace in a Car" engraved on them, which are extremely rare, realise 45s or more.

Queer Strikes. Not long ago the school children of Colsterworth, near Grantham, went out on strike against one of their masters. Other queer strikes may be recalled. The executioners of Canton went out on strike once, complaining that unless they got more than 300 cash (a shilling) a head they would starve; the female prisoners in Wormwood Scrubs Prison struck against an order requiring them to carry coals to the laundry fires, work which had previously been the prerogative of "gentleman" convicts; the beer-drinkers of Bamber Bridge, near Preston, struck as one man against an increase in the price of their favourite beverage; the baristers of St. Amand struck as a protest against the "tyrannical attitude" of the presiding judge; and among other bodies who have adopted this form of protest against grievances within recent years are paupers, choir-boys, ministers (who considered a pound a day "little better than insult"), commercial travellers, and undertakers' men.

Qualea, a name given to the crimson-beaked weaver bird of Africa.

Quercifrons, the bark of a species of American oak from which a yellow colouring matter is obtained. It is also used in tanning.

Quern, a form of stone handmill for grinding corn, in use in early times. It consisted of two flat stones, the upper revolving on a pin inserted in the lower.

Quicksilver. (See *Mercury*.)

Quilisma, a doctrine expounded by a Spaniard, Miguel Molinos, in the 17th century, and serving for the foundation of a sect in France which was joined by many distinguished people. It dispensed with rites and ceremonies, and claimed that the mercies of God and the merits of Christ were sufficient for a man's religious needs. Madame Guyon was a devoted Quietist of the 17th century.

Quills for writing with were first used in the 6th century, and superseded by steel pens in the 19th.

Quince, a well-known hardy orchard tree of the pear family, bearing fragrant, yellow, pear-shaped fruit, largely used for preserves. A mullage is made from the seeds, which also possess medicinal virtues.

Quintecemvir, one of the fifteen ancient Roman magistrates appointed to keep charge of the Sibylline books, and called priests of Apollo.

Quinine, a vegetable alkali obtained from the bark of several trees of the *Cinchona* genus. It is extremely bitter and colourless. The drug, sulphate of quinine, is one of the most valuable medicines, forming a powerful tonic. It is antiperiodic, antipyretic, and antineuralgic. In cases of malaria it is the most efficacious simple remedy known.

Quintain, a tilting post, from the top of which a board was suspended horizontally for the tilters to strike at with their lances.

Quintal Métrique, a French weight of 100 kilogrammes, or 220 lbs. avoirdupois.

Quintet, a musical composition of five parts, for voices or strings.

Quintilliana, the name given to certain heretics of the 2nd century, who used bread and cheese for the Eucharist and permitted women to be priests. Their leader was a Roman woman named Quintilla.

Quirinal, one of the seven hills upon which Rome was built.

Quiscalus, a class of birds of black plumage belonging to *Passerina* order, popularly known as Boat-tails, because of the feathers of the tail being turned up. They are confined to the Southern States of North America and Central and South America.

Quiver, a receptacle for arrows. In olden times, when archers were the main portion of an army, quivers were of leather, and deep enough almost to cover the arrows.

Quorum, a term indicating the number of members of any body or company necessary to be present at any meeting or consultation before business can be transacted. Forty members constitute a quorum in the House of Commons.

Quo Warranto ("By what Authority"), a form of writ which has existed in England since 1240, and is a direction to the proper authorities to inquire into the circumstances under which any office or franchise is held. The proceedings in such cases at the present day are by "information."

R

Rabbi, a Jewish term applied to specially ordained officials who pronounce upon questions of legal form and ritual, and also generally accorded to any Jewish scholar of eminence.

Rabbit, a rodent burrowing mammal, a native of Europe but now common in other countries where it has been introduced and multiplied enormously, especially in Australia. In its wild state it has a brownish fur, while in its domesticated varieties it is of many colours—grey, white, black, and pied. Wild rabbits have erect ears, but in some domestic breeds the ears are long and droop, hence the term lop-eared. They breed rapidly, rearing several litters a year. The fur is utilised for hats and other purposes, and the flesh is a popular article of food.

Racahout, a substance made from the acorn of the belote or Barbary oak, and much used as a food and medicament by Arabs. An admixture of the same name, with various added ingredients, is sold in France.

Raceme, a botanical term indicating flowers of a clustering and pendant form, the individual blossoms being borne on simple stalks arranged round a single common axis.

Rack, an ancient instrument of torture, consisting of a platform fitted with bars, one of which was movable. The feet of the victim were fastened to one bar and the hands to the other; then by means of the movable bar the limbs were stretched to great tension—sometimes to the point of dislocation—and the torture was continued either until the tortured one "confessed" or became senseless.

Rack-rent, rent of the full yearly value of the property held. A term generally used to denote excessive rent.

Rack-work, a piece of mechanism in which a rack is used; a rack-and-pinion arrangement or the like. A rack in this sense is a toothed-bar, adapted to work into the wheel teeth.

Racoon, a plantigrade carnivorous mammal, common to the American continent. It is about a foot long, with a bushy ringed tail, and sharp snout. Its skin is valuable. The racoon has the peculiar habit of dipping its food in water before eating it.

Radcliffe Library, Oxford, was founded under the will of Dr. John Radcliffe, who died in 1742, leaving £40,000 for that purpose. The Library was opened in 1749.

Radicals, a classification of the animal kingdom adopted by Cuvier, and including the Protozoa, Polyzoa, etc. This classification, however, is not now followed, the members of it being arranged in separate groups.

Radicals, as the name of a political party, dates from about 1846, when the Reform movement began to assume prominence, and "Radical Reform" was vigorously agitated for; ordinarily the term means proceeding from or pertaining to the root of any matter or body.

Radiometer, an instrument invented by Sir William Crookes in 1874, for transforming radiant energy into mechanic force. It consists of four horizontal arms of fine glass, poised so as to revolve easily on a point, and is enclosed in a glass or metal tube almost exhausted of air. The arms move under the influence of light and heat, according to the strength of the rays.

Radium, a remarkable element discovered by Madame Curie in infinitesimal quantities in pitchblende, and possessing an astonishing degree of radioactivity, giving off heat and light with an intensity not approached by any other substance. It is about 268 times as heavy as hydrogen, and according to Sir Oliver Lodge 100,000 electrons of radium could lie in the diameter of an atom. It is assumed that radium is present in the sun, and some scientists hold that in this element we have probably what may solve the problem of the material universe. As yet, however, it is impossible to foreshadow the extent to which radium can be practically utilised. The Radium Institute, founded and equipped by Lord Iveagh and Sir Ernest Cassel, was opened on August, 1917, for the treatment of patients and the prosecution of researches into the effect of radium on the human system.

Radius, in geometry, is the measurement of a straight line marked from the centre to the circumference of a circle or curve.

Ragged Schools were established in this country in 1844 by a number of philanthropists headed by the Earl of Shaftesbury, with the object of educating and protecting very poor children. There are now hundreds of such institutions in the United Kingdom.

Ragstone, the popular name of a kind of sandstone which shows a ragged fracture on breakage. Kent rag is a familiar example.

Rail, a well-known genus of the *Rallida* family—one species of which—the Water Rail—is common in various parts of Continental Europe, and also in the fen districts of England.

Railway Classes. Some thirteen hundred million passengers are carried by the railways of the United Kingdom. Of these (exclusive of season-ticket holders) about 30,000,000 travel first-class, 32,000,000 second-class, and over 1,248,000,000 third-class. From November 1st, 1844, every railway company was compelled to run one train a day each way between all its stations, and to convey passengers at a penny a mile. This was the work of Mr. Gladstone while President of the Board of Trade, from 1843-45. In 1872 the Midland announced that third-class carriages would be run by all its trains. Third-class traffic has increased except in 1909, while the other classes have decreased.

Railways of the world. There is invested in the world's railways over £2,250,000,000, Europe accounting for about half the total capital, and the United Kingdom for over £1,300,000,000. The railways of Europe represent an investment of £2,250 a mile, while those of the rest of the world average £11,402. Great Britain's railways represent the highest cost per mile, the figures being £51,368, while those of Belgium come next with £30,048. The total railway mileage of the world is about 670,000 miles; the United States adding with 250,000 miles; Russia has 46,000; Germany 39,000; Austria-Hungary, 31,000; Australia, 28,000; Austria-Hungary, 26,000; the United Kingdom, 24,171; Canada, 20,750; Argentina, 20,000; Mexico, 10,000; Brazil, 14,000; Italy, 11,000; Spain, 10,000; Japan, 5,500; Switzerland, 3,000.

Rain is water discharged from clouds in drops, and formed of the aqueous vapour of the atmosphere, derived from the evaporation of water both from sea and land. Before it reaches the earth it is the purest form of water known. The heaviest rains occur in equatorial regions, and the smallest in the deserts.

Rain Gauge, an instrument consisting of a deep metal funnel whose stem dips into a graduated glass jar and measures the rainfall dropped in it.

Rajah, the title of a Hindoo prince, once equivalent to that of king, but now only implying chieftainship in the native states of our Indian Empire.

Ramadan, the time of the Mahomedan Lent, the 9th month of the Moslem year, a movable period fixed according to lunar calculation. It lasts for thirty days, and all good Mahomedan fast in Ramadan from sunrise to sunset each day, during the interval from sunset to sunrise being at liberty to eat, drink, and make merry.

* **"Rambler (The),"** published by Dr. Johnson twice a week while it lasted.

Rambouillet was a royal French château some 25 miles from Paris, and served as a royal residence for nearly three centuries. Francis I. died, and Charles X. abdicated, there.

Ramie, or China grass, a plant largely grown in China, Japan, and other parts of Asia. From its fibre many beautiful lustrous textiles are manufactured in China and Japan, and more or less successful attempts have been made to establish the industry in England.

Ramillies, Battle of, was fought on May 23, 1706, between the English and German forces and the French and Bavarians, when the latter were signally defeated. For his great achievement on this day the Duke of Marlborough was accorded high reward and honours.

Ramism, the logical doctrine propounded by Pierre de la Ramée, opposed to that of Aristotle, and the subject of some controversy in the 17th century. Milton wrote upon it, and for a time it was in favour at Cambridge University.

Rampant, in heraldry, is a term applied to the figure of an animal with forelegs elevated, the dexter uppermost. When the animal is shown side-faced it is rampant *displayed*, when full-face, *rampant guardant*; when looking back, *rampant regardant*; and when in sitting position, *rampant sejant*.

Rampion, the common name for plants of the bell-flower family.

Rampur Chudder, a kind of fine woollen shawl made at Rampur in India.

Ranelagh Gardens was a fashionable public garden at Chelsea for concerts and dancing in the 18th century, and existed down to 1804.

"Ranters," a name applied at one time to the Primitive Methodists, a body who separated themselves from the Wesleyan Methodists in 1830, and by their more demonstrative practices, such as street preaching, camp meetings, processions, etc., attracted much popular attention.

Ranz des Vaches (pronounced "Rauntz Day Vache") a Swiss herdsman's melody, played on the alpenhorn, as a call to the cows. As played in the open air, with the mountain echoes answering, it is very effective.

Rape, a cruciferous plant yielding coleseed or rape-seed, extensively grown in all parts of Europe and India. Rape oil or colza is made from the seeds, and the leaves and refuse are used for sheep-food. Rape oil is a yellow, thick oil, of considerable commercial importance as a lubricant and for other purposes. It was at one time much used as an illuminant.

Raphides, crystals of calcium oxalate, found mostly in cells of plants of the palm and lily order.

Raptures, an order of birds of prey, of which there are upwards of 500 species, divisible into two main sections, *Falconidae* and *Strigidae*, including in the first eagles, vultures, hawks, falcons, etc., and in the second owls and other nocturnal birds of prey.

Rastadt Treaty of Peace, between the French and Germans, was signed on the 6th March, 1714, and closed the War of the Spanish Succession.

Rat, a well-known order of rodent embracing many species. The *brown rat* appeared in Europe early in the 18th century, coming from the East and entering by way of Russia; now it is widespread and met with in Britain and all parts of the Continent. The *black rat*, which was the common rat before the arrival of the brown species, is a smaller animal and now comparatively scarce. There are numerous other kinds, all of them gross feeders, and existing in such numbers in many places as to constitute a pest. Very active measures of extermination have lately been adopted.

Ratel, a carnivorous animal of the badger family, having the lower part of the body black, and the upper part a light grey. It is found in India and at the Cape, and is often styled the "honey-badger" because of its honey-eating propensities.

Rationalism claims to decide matters of belief and doctrine by the test of reason. It recognises only what is demonstrable by science, rejects supernatural authority and revelation, but does not entirely deny

the existence of a God or the immortality of the soul. A sect calling themselves Rational Christians first obtained registered places of worship in this country in 1876; they claim that their methods of investigating religious matters are more rational than those of Christians attached to other recognised denominations.

Rattite, a bird classification which includes ostriches, cassowaries, emus, and other flightless, flat-breasted birds.

Rattening, a term applied to the act of concealing or taking away workmen's tools to prevent them being used during trade disputes. The word came into use at Sheffield and thereabout during the great labour disputes of 1867.

Rattlesnake, a genus of venomous snakes which obtain their name from the possession of a rattle in the end of their tail, consisting of horny pieces so arranged that when vibrated they make a rattling sound. They are only found in North and South America.

Ravelin, a form of detached fortification of triangular shape, with two embankments constituting a projecting angle.

Raven, a black-plumaged bird of the crow family, with raucous voiced and massive bill. Occurs in many parts of Europe, Asia and America. Ravens are easily domesticated and form interesting pets. Dickens had one which he turned to good account as the companion of "Barnaby Rudge."

Ray, a kind of fish with a very flat body and broad and fleshy pectoral fins. There are about 140 species. In Britain they are generally called *skate*.

Razor Bill, a sea-bird of the auk family, having a high, furrowed bill, and dark plumage. It inhabits rocky cliffs during the breeding season and at other times is mostly out on the open sea. It lives exclusively on fish, which it catches by sudden diving.

Readers, a class of ministrants introduced in the Church of England in 1866 and still continued. Their duties are to read certain portions of the Service and otherwise to assist in church work, though they are not ordained or entitled to be styled "reverend."

Real, a silver coin current in Spain, Mexico, and South America, and worth about 24d. English.

Realgar, a mineral of a reddish colour formed in crystals and also granular, in China, Mexico, and some parts of Central Europe, and is a compound of arsenic and sulphur.

Reaping Machine, in its present practical form, is an American invention which cuts down standing grain and binds it in sheaves ready for carting. The leading machine of this kind is the invention of McCormick. Several reaping machines were previously devised in this country, but they were crude efforts in comparison with the present effective harvester and binder.

Rebecca's daughters were a secret Welsh organisation, existing in 1849, whose object was to destroy toll-gates, which were so numerous as to be a burden to the people. They dressed in women's clothes, and called themselves "Rebecca's daughters," with particular reference to the passage, "And they blessed Rebecca, and said unto her, Let thy seed possess the gate of those which hate them." They went abroad in the night-time and did much destruction. A general relief from highway tolls followed after a commission of inquiry.

Rebus, a kind of word-puzzle in which pictures of things are given in place of words and letters. For instance *Rainsgate* might be represented by a couple of rains and a gate. These picture puzzles afforded much amusement to the leisured class of the Middle Ages. The name of Aldershot is a perpetuated rebus, the arms of the town including representations of an alder tree and pyramidal heaps of shot.

Recent Formations, in geology, are the newest strata or beds, and represent a period later than the Pleistocene. The fossil deposits of these formations are mainly similar to existing species.

Rechabites, members of a society of total abstainers from intoxicating drinks. Rechab, father of Jonadab, refused to drink wine, build or live in houses, sow seeds or plant or own vineyards. The

modern Rechabites do not carry their abstinence further than refraining from intoxicants.

Recitative, a style of singing only slightly removed from ordinary speaking, and utilised for narrative portions of operas, oratorios, etc.

Recluse, one who withdraws from the world to devote himself in solitude to religious meditations.

Recorder, a judge of a city or borough having a court of quarter-sessions. The Recorder of the City of London is elected by the Lord Mayor and Aldermen, but other recorders are barristers of eminence appointed by the Crown.

Record Office, in Chancery Lane, London, the place where the Public Records of England are now preserved, including Domesday Book, the various Rolls of Charters, and important historical documents from a remote period.

Recreative Religionists was the name given to a body of gentlemen who sought to popularise natural religion by courses of scientific lectures. These lectures were delivered by such eminent men as Huxley, Carpenter, and others, and from 1866 onward for some years were very popular, and led to the formation of the Sunday Lecture Society.

Rector, a clergyman having charge of an ecclesiastical parish, and entitled to receive all the tithes. The same title is borne by the head officers of some of the Universities and Colleges.

Recusants was the name given to such people as refused to attend the Anglican Church or to acknowledge the ecclesiastical supremacy of the Crown in the days of Elizabeth. Severe penalties were incurred by these persons, who were mostly Roman Catholics, and the Act continued in force for a considerable period. Though dissenters were "relieved" from 1689, the Act was not fully repealed till 1844.

Redan, a style of fortification consisting of two parapets or mounds of earth in angle form, the apex pointing outward.

Red Crag, the name given to a strata of incoherent gravel or sand, containing certain fossil mollusc deposits, found on the Suffolk and Essex coast, and largely used in manure manufacture.

Red Cross. (See *Geneva Convention*.)

Rede Lecture, at Cambridge University, was instituted and endowed in 1524 by Sir Robert Rede, chief Justice of Common Pleas. These lectures were superseded in 1859 by an annual oration, which is usually given by an eminent scientist.

Red Letter Day, a church festival day indicated in the Prayer Book by red letters. It has come to be used in speech and writing to indicate any day of special significance.

Redoubt, a term applied to enclosed fortified works generally, but more especially to a small area temporarily fortified as a place of retreat for a defending force.

Redpoll, a family of birds noted for bright crimson foreheads and crowns. They inhabit some parts of Southern Europe and of North America, are abundant in Western Asia, and are also represented by some British species, including the linnet and the common redpoll, both of which are admirable songsters.

Red Sand Stone, the general name for red sand stone geological formations, chiefly produced by the disintegration of ordinary crystalline or metamorphic schists, oxide of iron forming the colouring factor.

Redstart, the sub-family of the *Saxatilis* order of birds, confined to the Old World, and nearly allied to the Redbreasts. They have red feathers in their tails. The two species found in Britain are the common Redbreast and the Black Redstart, the former a winter and the latter a summer visitant.

Redwing, a bird of the thrush family, which finds its way to this country for the winter. It is not so large as the common thrush, but it is very similar in its general colouring and structure.

Redwood, a great timber tree found in California, growing from 200 to 300 feet high and from 8 to 12 feet in diameter, with a bark from 6 to 12 inches thick. The wood is largely used for building purposes. There are several other species of red

wood in the East and West Indies, and the Scotch pine is locally known by the same name.

Reed Instrument, any wind instrument of the oboe or clarinet class, the sound of which is produced through a tongue or plate of reed, wood, or metal in the mouthpiece, which when blown through emits a musical sound, by the vibrations induced.

Refectory, the name given to the eating room, chamber or other apartment of a monastery, or other place where meals are regularly eaten.

Referendar, the name given in Germany to a candidate for judicial office who has only passed a portion of his examinations, and is filling a minor position without pay.

Referendum, a term applied to a clause introduced into the Swiss Constitution in 1874, providing that certain laws passed by the Legislature should not be put into force until referred to, or ratified by, the people generally. Also used to signify a note by an ambassador to his government on a point respecting which he is without specific instructions.

Reformation, the great religious movement of the 16th century, which resulted in the establishment of Protestantism. In the previous century Wycliffe, Huss and others had sounded the warning note, and when later on Luther took up the cause in Germany, and Zwingli in Switzerland, adherents soon became numerous. The wholesale vending of indulgences by the Papal agents had incensed the people, and when Luther denounced these things he spoke to willing ears. After much controversy, the Reformers boldly propounded the principles of the new doctrine, and the struggle for religious supremacy grew bitter. They claimed justification by faith, and the use as well as the authority of the Scriptures, rejecting the doctrine of transubstantiation, the adoration of the Virgin and Saints, and the headship of the Pope. Luther was excommunicated. But the Reformation principles spread, and ultimately a great part of Germany, as well as Switzerland, the Low Countries, Scandinavia, England and Scotland were won over to the new faith. In England, Henry VIII. readily espoused the cause of the Reformation, his own personal quarrel with the Pope acting as an incentive. Under Mary there was a brief and sanguinary reaction, but Elizabeth gave completeness to the work which her father had instituted.

Reformatory Schools, for the reclamation of juvenile offenders, originated in France in 1839. The Philanthropic Society of London founded such an institution at Redhill in Surrey in 1850. Since then many other schools of this class have been opened, under government authority and inspection, and there are now some 45 Reformatory, 139 Industrial, 24 Truant and 24 Day Industrial Schools in existence in Great Britain, with about 23,000 boys and 5,000 girls. In Ireland there are six such schools.

Reform Bills. The principal Bills have been passed for the Reform of the Parliamentary Franchise. The first was that of 1832, which in addition to a sweeping re-distribution of seats, granted the franchise to borough householders paying a £10 rental, and in counties to those with a rental of £50. The second Reform Bill was passed in 1867, conferring the franchise on all borough householders paying poor rates, on lodgers paying £10 a year, and to tenants in counties paying £12. A third Reform Bill, passed in 1884, practically gave household suffrage and effected a large measure of redistribution of seats. The Parliament Bill of 1911 may also be classed with Reform Bills, since it practically abolishes the veto of the House of Lords, and paves the way for the reconstitution of that Chamber.

Refuges for destitute boys and girls were established in 1825, the first institution of the kind being in Great Queen Street in London.

Regalia, a term commonly used to indicate the ensigns of royalty, such as the crown, sceptre, sword of State, etc., which, in the case of the British insignia, are kept in the Tower of London; but in its stricter sense meaning the prerogatives of royalty, which are six in number—the power of judicature, of life and death, of war and peace, of estrays, etc., of assessments, and of minting money.

Regattas, which are boat or yacht races, were first introduced into this country in 1775, when the Thames was the scene of one of these competitions. Since then they have become popular institutions on the river and round the coast, and at Henley every year there is a very fashionable gathering at the Regatta there.

Regency Bills were the Acts of Parliament passed in the reign of George III., appointing the Prince of Wales (afterwards George IV.) to the Regency during his father's mental incapacity.

Regent's Canal, extending from Paddington—where it connects with the Grand Junction Canal—through Regent's Park, Islington, Hoxton and Hackney, to Limehouse, where it merges into the Thames. It is 9 miles in length and for a considerable portion of its course is subterranean. It was opened in 1820.

Regicides, the name given to the commissioners who tried and condemned Charles I. They were 150 in number, of whom 70 acted and 59 signed the death warrant. On the Restoration most of those who were then living were brought to trial, and 30 out of 29 were executed.

Regiments, the name given to bodies of military troops forming the largest permanent unit commanded by a colonel. The Dragoon Guards, the Scots Greys, and the Royal Irish were formed about 1684, the Coldstream Guards in 1660, and the first regiment of Lancers in 1816.

Regium Donum, a royal gift in support of the Presbyterian ministry of Ireland, begun by Charles II. in 1672, and revived by William III. in 1690. A commutation of this allowance was effected by a special Act in 1871.

Regius Professor, a University Professor occupying one of the Chairs established by Henry VIII. Oxford has eight Regius Professors, Cambridge three, and Dublin five.

Reichsrath, the Austrian Parliament, comprising an Upper House of Princes, Nobles and Prelates, and a Lower House of 353 members.

Reichstag, the Diet or Imperial Parliament of Germany.

Reign of Terror, in France, practically dated from the ascendancy of Robespierre to his fall, March 1793 to July 1794.

Reindeer, a genus of deer horned in both sexes, occurring only in northerly regions. It has an average height of 4 feet 6 inches, is very fleet of foot, and the Laplanders utilise it for draught purposes.

Relics are objects which the Roman Catholic Church has declared to be worthy of special veneration, and comprise supposed portions of the Cross, bones and garments of saints etc., which are treasured in churches and shrines, and often attract large bodies of pilgrims.

Relief in sculpture is of three kinds—high relief (*alto-relievo*), in which the figures stand out to the extent of one-half on their natural proportions, low-relief (*basso-relievo*) when the figures project but slightly; and middle relief (*mezzo-relievo*), when the projection is intermediate.

Religions are of more numerous kinds than can well be classified. At the present time, it is estimated there are throughout the world about 500,000,000 Christian adherents, including 270,000,000 Roman Catholics and 170,000,000 Protestants; nearly 400,000,000 Confucians and Taoists, 250,000,000 followers of Hinduism, 220,000,000 Mahomedans, 140,000,000 Buddhists and 12,000,000 members of the Jewish faith.

Religious Tract Society was founded in 1779, and circulates from 60 million to 70 million copies of its numerous publications yearly.

Remainder, a legal term signifying a future condition of an estate, taking effect after its enjoyment by the present tenant is terminated. It does not "vest" until the event which will put an end to the present estate is certain of happening.

Remora, a peculiar family of fishes possessing a flattened oval suctorial projection on the top of the head, by which the fish can attach itself firmly to the bottoms of vessels or other objects. The remora occurs mostly in warm seas and attains a length of about 30 inches in the tropics.

Renaissance, a term designating the revival of classic ideals in literature, painting and architecture, a movement which was most prominently exemplified in France, and lasted through the main part of the 15th and 16th centuries. The influence of the Renaissance in England was mostly literary.

Rennet, a substance obtained from the stomach of a calf or other sucking quadruped, and used for curdling milk.

Repeater, the name applied to a watch that will strike the hour last past on the pressure of a spring. In the more modern examples the repeating extends to the striking of the quarters and minutes.

Replevin, a legal term indicating an action-at-law to decide whether goods taken in execution have been rightfully seized or not.

Repoussé, a style of ornamentation produced by hammering up metal from the inside, so as to form distinct designs on the outer surface.

Representative Peers are peers elected by their fellow peers to sit in the House of Lords—Scotland has 16, elected or re-elected for each Parliament; Ireland has 4, elected for life.

Reptilia, the class of vertebrate animals including tortoises, lizards, snakes, crocodiles, etc. They are in general structural arrangement very similar to birds, and the theory of evolution indicates that birds are the descendants of the Reptilia.

Requiem, a Mass for the dead, musical settings of which have been written by many eminent composers. Among the best-known Requiem is those of Palestrina, Mozart, and Verdi.

Reredos, the ornamental screen at the back of the altar or Communion table. It is often of a highly-decorative character.

Resins, are vegetable compounds largely employed in the industrial arts. They comprise india-rubber, turpentine, mastic, copal, dragon's blood, etc.

Respirator, a protective article worn over the mouth by persons affected with throat or lung disease, to prevent their breathing the raw cold air or fog. Ordinarily it is made of wire gauze so contrived that the air in its passage into the mouth is slightly warmed. Respirators charged with filtering substances have been introduced.

Respondentia, a legal term applying to maritime contracts, mortgaging ships and their cargoes for money advanced; differing from a bottomry bond in the extent of the pledge.

Rest, a musical term denoting silence or cessation from playing for the period represented by the character of the rest. Thus, there are minim, semibreve, quaver, and other rests, which represent the same lengths of silence as the notes themselves would represent in sound.

Retriever, a variety of the domestic dog useful to sportsmen for bringing in game that have been shot. It is a capital water-dog, and is usually of a black or brown colour.

Revelation. (See Apocalypses.)

Revolver, a revolving pistol provided with a number of chambers (six being the usual number), each of which can be fired in succession by the pulling of the trigger. A weapon of this kind existed in the 17th century, but it was not until 1825, when Colt's revolver was introduced, that a really serviceable small arm of this class was available. The principle of the revolver has been adapted to breech-loading guns, as in the mitrailleuse and the mauler.

Rexnes des Deux Mondes, "the famous French fortnightly review, which has been continued by the greatest writers in France; started in 1831.

Rhantic Beds, a term applied to certain strata which connect the Lias and Trias formations. They abound in fish fossils, and occur at Penarth in Wales and in certain parts of the Alps.

Rhea, a large bird of the ostrich family, a native of America, and the only species of the Katitz known on the American continent.

Rhesus, the name of one of the sacred monkeys of India. It is abundantly distributed over the hills and plains, and is about 18 inches long and of a yellowish-brown.

Rhinoceros, a huge hoofed quadruped, of which

there are nine existing species; native to the river and marsh regions of Africa, India, Borneo and Java. It is remarkable for its thick hide and upturned snout, from which springs a long horn. The white rhinoceros, which is scarce, is the biggest species, attaining a length of 10 to 12 feet and a height of from 5 to 6 feet. The black rhinoceros is the most familiar.

Rhodium, a scarce metal discovered by Dr. Wollaston in 1804 in platinum ores.

Rhynchope, a genus of birds of the gull family, inhabiting the tropical parts of Africa, India and America. They are noted for their large curved bills, the upper mandible of which is much shorter than the lower one.

Rialto, a famous bridge that crosses the Grand Canal at Venice, and dates from 1591.

Ribbon Fish is a deep-sea fish, deriving its name from the ribbon-like shape. Though many feet in length, it is only an inch or two thick. By reason of its keeping to the ocean depths, the ribbon fish is rarely met with.

Ribbonism, a term applied to an agitation got up in Ireland about 1820 by a secret society whose object was to avenge upon landlords what the conspirators considered the wrongs of tenants. Many agrarian crimes were committed by the members of this society between 1828 and 1871, when a special Act was passed for their repression.

Ribbons, strips of fine fabric, usually made of silk, velvet, or satin, and in a great variety of colours and designs. They came into vogue in the 16th century. Coventry is at present the chief seat of the ribbon industry in England.

Ribbon Seal, a kind of seal found in the North Pacific, remarkable for being ornamented with an almost white broad band along its back and around its neck.

Rice, a grain-yielding grass extensively cultivated in India, China, and certain parts of America, and forming the main article of food of the Indian and Chinese peoples. Rice to the value of nearly three million pounds sterling is annually imported into this country. Arrack, an alcoholic liquor, is made from fermented rice seeds.

Riccolite, an ornamental stone, found almost exclusively in New Mexico, and presenting a series of white, olive and green serpentine layers.

Rider, the popular name of a Dutch gold coin first put into circulation in the 16th century, but not now in use. Its name was derived from its having engraved upon its obverse the figure of a horseman. It weighed about 50 grains. A coin of the same name was issued by James VI. of Scotland, afterwards James I. of England.

Rifle, a firearm, grooved in the barrel in order that the projectile may receive a rotatory motion on its own axis upon expulsion.

Rifle Bird is a remarkably beautiful Australian bird of a deep glossy black with olive-green and blue metallic markings. It is of arboreal habits. It is only the male which has any of such fine plumage.

"Rights of Man", the title of the declaration of the French National Assembly in 1793, proclaiming that all men have equal rights. Also the title of a famous book by Tom Paine, justifying the Revolution.

Rinderpest, an infectious cattle disease to which other ruminants are also liable. It spreads very quickly when once it breaks out, and over 50 per cent. of all the animals attacked die. It comes from Central Asia, and some of its visitations to this country have been attended by enormous loss of life. In 1856, out of 220,740 cattle attacked, over 73,000 died. The disease brings about a congestion of the mucous membranes, and there is an entire cessation of milk secretion.

Ring Dove, a kind of wood-pigeon, common in Britain, and about 17 inches long. It is of a blue-grey colour, tinged with brown.

Ring-money is supposed to have been in circulation among the ancient races of Europe, though the evidence on the point is not perhaps very conclusive. Numerous ring-shape pieces of bronze, however, have from time to time been discovered, which seem to favour the idea.

Rinks, for roller-skating, began to be popular in 1875 and in the course of the next ten years similar places were started all over the country, but died down after a few years, to witness a revival, however, in more recent days.

Riot Act (The), was passed in the first year of the reign of George I., its object being to prevent riotous assemblies. In times of disturbance, when a breach of the peace is threatened, if a magistrate reads the Riot Act to a collected crowd of twelve or more persons anyone refusing to disperse is liable to arrest and a long term of punishment.

Ritualists, the term used to designate an extreme High Church section of the Church of England, who brought into the ceremony of public worship coloured vestments, lighted candles, incense, and other features of Romanist worship, and excited much opposition and contention. The practices were repeatedly condemned. A Ritual Commission was appointed in 1904 to receive evidence in regard to ceremonial excesses, and attempts are being made to arrive at a basis by which both High Church and Low Church adherents can agree upon the subject of ceremonial. The report of the Ritual Commission, published in 1906, concluded that the law of public worship in the Church of England had become too narrow for the present generation's religious life; and that the machinery for discipline had broken down. The Commissioners favoured the giving of greater power to Bishops for the suppression of objectionable practices, but beyond this no immediate remedy of any effectuality or extent was suggested, and Ritualism remains practically unchecked.

Rix-Dollar, the name of a silver coin current in Germany, Sweden and Denmark up to the early part of the 19th century and worth about 5s.

Roach, a well-known fresh-water fish of the carp family, not often reaching more than a couple of pounds in weight.

Roburite, a flameless explosive invented and adopted in Germany in 1888. It is composed of chlorinated dinitro-benzene mixed with sufficient ammonium nitrate to oxidize it.

Rock Butter, the name commonly given to petroleum when found in its semi-solid state.

Rockets for use in war were invented by Sir William Congreve early in the 19th century, and proved very destructive in siege operations. Rockets, as implements of war, however, are now superseded by more efficient agents; but they are still used for signalling purposes, while in that connection their utility has been much increased in recent years. Boxer's life-saving rockets are mostly used in England.

Roeking, a marine fish of the cod family, distributed over the coasts of Europe, Iceland, Japan, South Africa, and New Zealand. There are eight known species, five of which are found on the British coast. This fish is remarkable for the number of barbels it carries around its mouth.

Rocks comprise the solid portions of the earth's crust, and all are composed of mineral substances and classed in reference to their various formations and conditions. (See Names of Different Rocks.)

Rock Soap, a kind of clay or black bole of a sticky nature, used for washing cloth and in the manufacture of crayons. It is a hydrate of silicate of aluminium.

Rod, a measure of length equalling 5½ yards, also called a pole or perch.

Rodentia, an order of mammals of the gnawing class, and including all kinds of rats, mice, squirrels, porcupines, hares, rabbits, etc.

Roe, the parts of fishes which extend on each side of the ribs in lobes next to the intestines. What is called "hard roe" is that of the female and consists of eggs; that of the male is the soft roe or milt. It is estimated that the ova in one conger-eel number many millions.

Roebuck, a deer that was formerly common in the forests and parks of Britain, but is now only found at large to the northern parts of Scotland. It is met with in many of the temperate regions of northern Europe and Asia.

Rogation Week begins with Rogation Sunday, the Sunday before Ascension day, and continues through the whole week, when extra prayers and supplications are offered as a preparation for the Ascension.

Rois Fainéants (King Do-Nothings), were the Merovingian Kings of France between 650 and 750, so-called because of their leaving the duty of government to their ministers.

Roller, an African and Asiatic bird of the *Columbidae* family. It gets its name from its habit of turning over in the air like the tumbler pigeon. It sometimes occurs in Britain.

Roman Catholic Church is the Christian Church whose head is the Pope of Rome. Its Creed comprises twelve articles, the seven sacraments of Baptism, Confirmation, Eucharist, Penance, Extreme Unction, Orders, and Matrimony: the doctrines include those of Original Sin and Justification, sanctioned by the Council of Trent; the Mass, as a propitiatory sacrifice; Purgatory; Papal Supremacy, etc. It was the established Church of England until the Reformation, after which many disabilities were imposed upon Roman Catholics, and continued in a more or less severe form until the passing of the Emancipation Act of 1829. There are three Roman Catholic Archbishops in England (Westminster, Birmingham and Liverpool), two in Scotland (St. Andrews and Edinburgh, and Glasgow), and four in Ireland (Armagh, Dublin, Cashel, and Tuam). There are over 260,000,000 Roman Catholics throughout the world, of which about five and a-half millions are in the United Kingdom, over three and a-quarter millions being in Ireland.

Romanesque Architecture includes the round-arched and vaulted orders, which were prominent from the 8th to the 12th century, and retains some characteristics of the Classical style, modified on Medieval lines. The Byzantine and Lombard orders come within the term Romanesque.

Roman Roads were made for the most part by criminals, and were of great strength and durability. Four such roads were made in England during the Roman occupation, fragments of which still remain. These were Watling Street, stretching from Kent to Cardigan; the Icknield Way, from St. David's to Tyne-mouth; Fosse, from Cornwall to Lincoln; and Ermin Street, from St. David's to Southampton.

Roman Walls for defence against invasion were built by Agricola, Hadrian, and Septimius Severus on the northern borders of England as a protection against the Picts and Scots. The first wall was begun by Agricola in A.D. 79, and extended a distance of 80 miles from the Tyne to the Solway Firth; the second was built from the Firth of Forth to the Firth of Clyde, 36 miles. Agricola's wall was extended by Hadrian in 121, and by Septimius Severus in 208, and ran from Howness, near Carlisle, to Walsend-on-Tyne. Many parts of these walls still remain.

Rondo, the name of a short musical composition with one prominent theme recurring throughout.

Röntgen Rays were discovered in 1895 by Professor Röntgen, of Wurtzburg, while experimenting with a Crookes vacuum tube, when the fact was accidentally revealed that a photographic plate, contained in a dark box and exposed to its rays, reflected metal objects, the box itself seeming transparent. Further experiments developed the idea, and now by the aid of Röntgen Rays photographs can be obtained of objects enclosed in solid bodies, enabling bullets and any solid bodies of metal, as well as bones, etc., in the body to be perfectly located and investigated. The discovery has proved of great advantage in surgical operations, and from experiments that are constantly in progress it is possible that the rays may prove of great utility in the case of various skin and other diseases.

Roodbeak, a reddish-brown member of the deer family, with large ears and pointed horns, abounding in the forests of Southern Africa.

Rook, a very common bird of the crow family abounding in all parts of Britain. The birds nest in colonies, and live chiefly on birds and insects. The plumage is black with blue and purple tinges.

Rosqual, a marine mammal of the whale order, specimens of which have been met with of from 70 to 100 feet long. They yield but a small quantity of blubber, and therefore are not much hunted. Several species are found in the North Sea.

Roseaniline, a well known aniline dye commonly known as magenta. (See *Aniline*).

Rosary (see *Beads*).

Roscolite, a green micaceous mineral first discovered by Professor Roscoe, and containing some 30 per cent. of vanadium pentoxide.

Rose Beetle, so-called because it feeds, wherever possible, on the petals of the rose. It is of a green colour on the back, red underneath, and is not more than one inch in length.

Roses retain their pre-eminence among flowers year after year, and the attar of roses is the most famous and most costly of all perfumes. The finest rose-gardens in the world are those of the province of Kozanlik, in Eastern Roumelia, where the plantations, which lie along the sweet valley of Maritza, extend up to upwards of 40 miles. Here nearly 6,000 lb. of the attar is produced every year, to make which several thousand tons of picked petals are used, for it takes about 200 lb. of rose leaves to make a single ounce of the attar. The price of the Turkish attar, which is produced by distillation, is from £15 to £20 per lb.; but that which comes from the South of France, where only a small quantity is produced, is even more expensive, owing to its particularly fine quality. The price of this is as much as £40 to £50 per lb.

Roses, Wars of the, between the rival houses of York and Lancaster, for the possession of the English crown, began in the reign of Henry VI. and terminated with the death of Richard III. on Bosworth Field. The emblem or badge of the Lancastrians was the red rose, and of the Yorkists the white rose. It is said that 100,000 of the gentry and common people, too nobles, and 12 Princes of the Blood were killed during the 20 years of this fierce contest. All rivalry between the Roses ended by the marriage of Henry VII., the Lancastrian, with the Princess Elizabeth, daughter of Edward IV., the Yorkist.

Rosetta Stone, a stone discovered in 1799 by the French at Rosetta in Egypt, and afterwards deposited in the British Museum. It is a piece of black basalt about 3 feet long, and contains hieroglyphic inscriptions, which were successfully deciphered, and found to contain a decree of Ptolemy Epiphanes, of about 195 B.C.

Rosewood, the name given to the timber of various South American trees of the *Leguminosae* order. Its ground colour is dark brown with red streakings, forming a variety of attractive designs.

Rosicrucians were a sect of philosophers founded by a German monk named Rosenkreuz in the 14th century. A good deal of mystery, however, surrounds the history of this secret society, the members of which were credited with the possession of the secrets of alchemy.

Rota Club was a political association formed during the Commonwealth, whose object was to secure the election of the chief officers of the State by ballot, and to have annual changes of Members of Parliament by rotation. Hence the name of the Club. They did not accomplish much, however.

Rotche, a small sea-bird of the Auk family, mostly inhabiting the Arctic Regions. Its back and wings are black and the under parts white. Familiarly known as the "Little Auk."

Rotifers, the order of animals known as "wheel-animalcules," microscopic in size, but possessing highly organised structures.

Rotham Row, a corruption of *route de roi* (king's drive), the fashionable riding and driving resort in Hyde Park.

Rottenstone, a siliceous limestone made porous by the action of water. In a pulverised form it is used for polishing soft metals.

Rouble, a Russian silver coin of the nominal value of about 2s. English.

Rouge, a substance obtained by heating coppers to the point of decomposition. This form of rouge is utilised both for polishing purposes and as a pigment.

Another kind of rouge used as an artificial colouring matter is obtained from the dried flowers of *Carthamus tinctorius*, and is mixed with French chalk finely powdered.

Rouge et Noir, a well-known gambling card game played on a table divided into two sections and marked with two black and two red lozenges. Any number of players can take part, and the money is staked on the red or black spaces. The cards are dealt out, first to Noir, until the pips aggregate more than 30; then in like manner to the Rouge, and the packet coming nearest to 31 wins the stakes.

Roulette, a gambling game played on a table carrying a revolving disc divided into 30 compartments, coloured red and black respectively. The players stake their money on any compartment, colour, or combination of numbers they please. The disc is whirled round and a ball is set rolling in the opposite direction, dropping finally into one of the compartments, thus deciding the winning number or colour.

Round, a musical composition in several parts, taken up by each participant at a different point from the others, and effecting a harmonious combination throughout. A Catch is similar in form, but usually allied to humorous words.

Roundheads, the name given to the Parliamentary party during the Civil War. It was originally a term of derision applied by the Royalists.

Round Towers are conical erections of considerable height, dating, probably, from some period between the 6th and 12th centuries. These buildings are numerous in Ireland, and three remain in Scotland. It is supposed they were built for ecclesiastical purposes, but there is no direct evidence of this existing.

Rove Beetles, beetles with long narrow bodies, and a habit of suddenly curving up their tails when surprised. They are a numerous genus, and much in evidence on warm summer evenings. They not only fly, but are capable of running at a great speed.

Royal Academy was founded in London, in 1768, under the patronage of George III., with Sir Joshua Reynolds, who was knighted for the occasion, as first president. The early exhibitions of the Academy were held first in Pall Mall, and later in Somerset House, where the exhibitions continued to be held until 1838, when the National Gallery being built, the Academy moved its quarters to that building. In 1869 the present Royal Academy, at Burlington House, was opened. The Academy numbers 40 R.A.'s and about 30 A.R.A.'s. The presidents have been: Sir Joshua Reynolds (1768), Benjamin West (1790), James Wyatt (1805), Benjamin West (1806), Sir Thomas Lawrence (1820), Sir Martin A. Shee (1830), Sir Charles Eastlake (1830), Sir Francis Grant (1856), Lord Leighton (1878), Sir J. E. Millais (1896), and Sir E. J. Poynter (1896).

Royal Academy of Music, founded in 1823, has enjoyed a Royal charter since 1830, and an annual Government grant of £500 since 1868. Every form of music is taught there, and the chief modern languages. It has valuable scholarships, and has produced many eminent musicians.

Royal Agricultural Society was founded in 1838 and incorporated in 1840. It holds an annual show, at which valuable prizes are offered for the best stock and the most important inventions in agricultural implements. These shows were held at different places each year from 1839 until a few years ago, when London was fixed upon as what was hoped would be a permanent show place, and a large tract of ground was secured at Park Royal for that purpose. The shows held at the latter place, however, failed to attract the public, and a reversion was made to the old system in 1906.

Royal College of Music, at Kensington Gore, was incorporated in 1883, and receives pupils of both sexes. It has 57 Open Free Scholarships and 21 Close Free Scholarships.

Royal Humane Society. (See *Humane Society, Royal*.)

Royal Institution was established in 1792, and was incorporated by Royal charter in 1800 for "the diffusion of knowledge" and the facilitating of inventions and scientific discoveries. It was in the

building of the Institution that Faraday conducted his experiments. Since 1833 it has supported two professors, one of chemistry and one of physiology.

Royal Society was founded in 1660 and received a Royal charter in 1662, Sir Robert Moray being the first president. Two years later the society began to publish its *Philosophical Transactions*. It was to the Royal Society that Newton first read his *Principia*, which was ordered to be printed. The meetings of the society have been held in rooms in Burlington House since 1857. There is a Parliamentary grant of £4,000 a year to the society for scientific purposes. Among the presidents have been Sir Christopher Wren, Pepys, Sir Isaac Newton, Sir Joseph Banks, Sir Humphry Davy, Professor Huxley, Lord Rayleigh, and Sir Archibald Geikie.

Rubber, produced from the juice of certain trees and shrubs of tropical countries, is in such extensive demand now for tyres and other purposes that rubber plantations have been established in almost every part of the world where rubber can be grown. The best kinds come from the Amazon valley. In 1910 a great rubber "boom" was experienced, hundreds of new companies being floated, while the price of rubber was more than doubled. There is an annual consumption of some 125,000 tons of rubber at the present time (1914). An artificial rubber, "synthetic rubber" was introduced.

Rubicon, a small river falling into the Adriatic, and forming one of the Italian boundaries, the crossing of which anciently involved decisive action and constituted a declaration of war. Thus the phrase "crossing the Rubicon" came into general use, denoting an act from which there is no withdrawal.

Rubidium, a scarce element first discovered in certain mineral waters in Bavaria in 1861 by Bunsen. It is always associated with lithium, and frequently with potassium and sodium.

Rubrics are the special instructions in regard to the ceremonies of the Church, appearing in the Prayer Book, and easily denoted by being printed in red.

Ruby is a deep red kind of *Corundum*, and a variety of sapphire; one of the most valued of precious stones, the best examples being worth more than diamonds of the same size and quality. Burma yields some of the finest, and rubies of inferior colour are found in Siam, Ceylon, South Africa, and Brazil.

Rudd, a fresh-water fish of wide distribution, plentiful in the rivers of Britain, and found in most other parts of Europe, also in Asia Minor. It is of a reddish-gold colour, with a greensh-blue beard. It averages from 1 to 2 lb. in weight.

Rudesheimer, a noted brand of wine made from grapes grown in the districts of Rudesheimer on the right bank of the Rhine.

Ruff, a bird of the sandpiper family, which was at one time very common in the Fen districts. The males are peculiar in having a well-developed ruff of feathers round the neck.

Ruffe, a small fresh-water fish common in most parts of Central Europe, and similar in appearance to the ordinary perch. It is found in British rivers.

Ruffles, the name given to a pleated strip of fine linen worn by men in the breast of the shirt, and fashionable down to the early part of the 19th century.

"Rule, Britannia!" the national sea-song of England, was written by James Thomson, the author of the "Seasons," and set to music by Dr. Arne about 1740.

Rum, an ardent spirit distilled from molasses, and containing from 40 to 50 per cent. of alcohol. It is chiefly manufactured in the West Indies, and derives its special flavour from a volatile oil.

Ruminantia, a class of ruminants that chew the cud, being provided with a compartmented stomach, enabling them to swallow food, and afterwards bring it back to the mouth for mastication.

Rummage Sale, the name given to a clearing-out sale of articles, at docks or other public places, which have not been claimed by their owners within a prescribed period.

Runes or Runic Inscriptions, the description applied to certain alphabetic characters discovered cut upon stone monuments and implements found in

many parts of Europe, including England. In only a very few instances has it been possible to put any distinct and conclusive interpretation upon them.

Rupia, an East Indian coin forming the standard unit of value in India. It is of the nominal value of 2s., but, owing to the fluctuating price of silver, its value has much deteriorated in recent years, its actual value being rated by an Act of Parliament in 1898 at 1s. 4d.

Rusa, a genus of deer inhabiting India, Ceylon, the Philippines, and the Malay Archipelago. It stands about 5 feet high, is of a dark brown hue, and of a somewhat sturdy build. Its antlers are long and powerful. The Sambar is the most familiar species.

Rusiochine, a red substance resulting from evaporating the green solution formed when chlorine, water and ammonia are added to quinine already in solution.

Russian Grand Dukes.—The surviving male relatives of the Czar Nicolas II. extend to cousins of third degree and are all grand dukes. These thirty male members of the imperial house are a serious burden on poverty-stricken Russia, for each one of them receives as his birthright an income of £100,000, approximately, a year from the moment he sees the light of the world till the hour of his death. The present sum paid to the grand dukes and princes of the Russian imperial house thus amounts to a total of about three millions sterling per annum. Between them these grand-dukes and princes own 5,000 square miles of land, or about one-fortieth part of the entire territory of European Russia. Besides these vast estates, they possess no less than 335 palaces and castles, and employ some 20,000 domestic servants.

Ruthven Raid was the conspiracy of which Ruthven, Earl of Gowrie, was the leader in 1600, directed against James VI. of Scotland, which was unsuccessful, and in consequence of which Gowrie lost his life two years later.

Rye House Plot, formed in 1683 with the object of assassinating Charles II. and the Duke of York (afterwards James II.), in order to secure the succession of the Duke of Monmouth. The plot was frustrated, and among those who suffered death for supposed participation in it were Lord William Russell and Algernon Sidney. The meeting place of the conspirators was Broadbourne, Hertfordshire.

S

Sabal, the typical genus of the *Sabalidæ* family of fan-shaped leaved palms. *Sabal palmetto* is the Palmetto Palm.

Sabaoth, a Hebrew word, meaning an army or host, and applied sometimes to the Supreme Being, e.g. "the Lord of Hosts," (Rom. ix. 29).

Sabbatarianism, a term generally employed to designate such as rigidly observe the Sabbath, but in the 19th century applied to the sect which was in favour of Saturday (Seventh Day) being honoured as the Christian Sabbath. In America at the present time there are still several sects of Sabbatarianism, or Seventh Day Baptists.

Sabbath, the Day of Rest as ordained by God. Christians make it the first day of the week, and the Jews the seventh.

Sabbath Breaking.—In England penalties for the disregard of the Sabbath have been imposed from time to time by the Legislature. By the Statute of Charles II., c. 2, still in force, "No person is allowed to work on the Lord's day, or use any boat or barge, or expose any goods for sale, except meat in public houses, milk at certain hours, and works of necessity or charity, on forfeiture of 5s." Prosecutions under this Act are regularly carried out in several places, and the penalty imposed is duly paid by tradesmen who break the law.

Sabbatical Year was instituted by the Jews in ancient times for the purpose of giving the soil a rest from cultivation. This was every seventh year.

Sabellianism designates a religion founded by Sabellius in Egypt in the 3rd century, and did not accept the Trinity. A Council of the Roman Church condemned it in A.D. 360.

Sabines were a brave race inhabiting a territory near Rome in early times. Romulus, it is said, lured the Sabine men to the Roman sports, and in their absence carried off their daughters by force. Ultimately the Sabines were absorbed in the Roman people about 566 B.C.

Sable, a beautifully furred mammal of the weasel family, inhabiting Siberia and other parts of Northern Asia. It is bright brown in colour, and has a long, bushy tail. There is also an American variety. Wherever it exists it is hunted for its valuable fur.

Saccharin is an isonide of orthosulphobenzoic acid, a coal-tar product, and is 300 times as sweet as cane sugar. It is not used as a substitute for sugar, but simply as a sweetening agent when sugar is forbidden, as in certain diseases. It has no value as a food.

Saccharoid, a name given by Kane to a sweetish substance, similar to orcin, produced by the decomposition of Heeren's pseudo-erythrin.

Saccharometer, an instrument for determining the amount of sugar in solution by means of polarised light. Used in breweries and distilleries for estimating the specific gravity of worts, &c.

Sack was the name given in olden times to the white dry wines of Spain and Madeira, canary being the most popular.

Sacrament, according to the Protestant Church, includes Baptism and the Lord's Supper. In the Roman Catholic Church there are seven Sacraments. (See **Roman Catholic Church**.)

Sacred Books of the East is the term applied to the Books in which the faiths of Brahmans, Buddhists and Mahomedans are set down; and are claimed by believers to be works of Divine inspiration.

Sacred Wars of the ancients were three in number—those of the Achæans against Cirrha, 595 B.C.; that between the Phocians and the Delphians, 443 B.C.; and that of the Phocians and the Macedonians, 346 B.C.

Sacrifice, the offering up to a deity of some object as an expression of thanksgiving or penitence. The first sacrifice we read of in the Bible was that offered to God by Abel. The ancient Greeks, and the Romans practised sacrifice largely, and the history of Paganism is full of stories of human sacrifices. Some savage races indulge in these inhuman cruelties even at the present day.

Sacrilege is the breaking into a place of worship and stealing articles therefrom. In olden times these offences were punishable with death, but by Acts passed in the last century the punishment was generally treated as an ordinary burglarious offence.

Saddles were introduced by the ancient Greeks or Romans, and were not known in England probably before the 6th century.

Sadducees, a Jewish sect of unbelievers, who held that the soul was mortal, and that there was no hereafter. Alluded to in the New Testament.

Safety Lamp was used in coal mines, was invented by Sir Humphry Davy in 1815, and illustrates the principle that flame surrounded by fine wire-gauze is ineffective to ignite inflammable gases. George Stephenson invented a safety lamp about the same time and much on the same principle, but the completely effective safety lamp has yet to be invented.

Sagitta, or "the Arrow," one of the celestial constellations situated between Cygnus and Aquila. Sagittarius is another of the zodiacal constellations, consisting of 69 stars, which ancient astronomers worked into the representation of an archer. It is situated between Scorpio and Capricornus.

Saiga, an antelope of Tartary, Western Asia, and Eastern Europe, tawny yellow, and about the size of the fallow deer.

Sainfoin, a widely cultivated forage plant, especially adapted for sheep. It is of strong, leafy growth and bears bright red flowers.

Salamander, a species of amphibian lizard, of which there are several varieties; the spotted salamander is black spotted with gold, and is popularly credited with being incomcombustible in fire, which it, of course, is fallacy. Neither is it venomous, as has been supposed.

Saline, a white crystalline substance, much used as

a medicament, and obtained from the bark of willow-poplar, and other allied trees. It is a compound of carbon, hydrogen and oxygen.

Salic Law was instituted in France in the 6th century for the purpose of excluding females from inheriting the Crown. The Bourbons introduced the same law into Spain, but this was abolished by decree in 1830 to enable Isabella II. to succeed.

Salicylic Acid can be obtained from the flowers of the meadow-sweet, and from oil of wintergreen, but is now usually prepared by the action of carbon dioxide on sodium phenate under pressure. The acid is then prepared from the sodium salicylate. It is used both as an antiseptic and as a food preservative.

Salmon, a familiar fish notable for its habit of ascending rivers from the sea in the autumn and there depositing its spawn, not returning to the sea until the early spring. It is unlawful to catch salmon between September 14th and February 1st.

Salt, one of the oldest of condiments, exists in many substances, and is chloride of sodium, compounded of the non-metal chlorine and the metal sodium. It is obtained from deposits in the earth, from salt-springs, and from sea-water. There are salt mines in Galicia which have been worked for hundreds of years. The chief English salt-mines are in Cheshire.

Saltpetre. (See **Nitre**.)

Salvage, compensation given in respect of property saved from the perils of the sea, when the ship containing it has had to be abandoned, or it has been lost. Salvage compensation varies from one-tenth to one-half the value of the rescued property.

Salvation Army originated in East London in 1865, under the name of the Christian Mission, by William Booth, a former Methodist minister. The body in 1878 took the title of the Salvation Army, and for working purposes adopted a quasi-military organisation, with its General (Mr. Booth) as its commander-in-chief. The movement had for its object the promotion of religion among the masses, and has been carried on with great energy and success. It publishes 63 periodicals in 24 languages, with a total weekly issue of over 14 millions. Its operations extend to 52 countries and colonies. It has over 7,500 corps, circles, and societies, upwards of 20,000 officers and cadets, and 55,320 voluntary local officers. It has 44 shelters and homes. In this branch of its work it supplies annually over five million beds and more than eight million meals. An International Congress of Salvationists was held in London in 1904, and again in 1914, and King Edward received "General" Booth in private audience at Buckingham Palace. Later the venerable head of the organisation made extensive motor-car tours and trips abroad in furtherance of his work. His health failed, however, early in 1912, and after an operation on his eyes, and the almost total loss of his sight, he broke down and died in August and was given a great funeral after a lying-in-state. Bramwell Booth, his son, succeeded him.

Sanatorium, an institution for the reception of people out of health, and requiring nursing and medical attendance.

Sanctuaries were places where offenders against the law were free from arrest, and when all such asylums were suppressed in this country, several parts of London were treated as sanctuaries. The chief of these refuge localities was in Whitefriars. There were others in the Minories, Mitre Court, the Savoy, Westminster and the Mint. There were also sanctuaries at Beverley and at St. Burian's in Cornwall.

Sand Blast, an American invention introduced in 1871, is a method of cutting or decorating glass and other hard substances by means of sand driven by a blast of air or steam.

Sanderling, a bird of the sandpiper family, occurring on the British coast mostly as a bird of passage, and making its home in Arctic regions.

Sand Grouse, a common bird of the grouse family, inhabiting Southern Europe and Northern Africa.

Sandpiper, a bird comprising several varieties, some of which inhabit Britain along the Northern coasts.

Sanhedrim, the ancient Jewish Ecclesiastical Council of 70 members, said to have been originated by Moses when he called together 70 elders to assist him as judges. In modern times the Sanhedrim has only been summoned on very rare occasions, such as that convoked by Napoleon I. in 1806.

Sanitation, the science of health in its application to disease prevention generally, embracing the investigation of drainage, air supply, isolation in infectious disease, and hygienic measures of all kinds. The Sanitary Institute of Great Britain, founded in 1876, has accomplished much valuable work in the interests of public health and convenience.

Sanskya, one of the leading systems of the Hindoo faith, and supposed to be the philosophy from which Buddhism originated. It recognises no deity, but assumes the existence of primordial matter and of spiritual individuality.

Sans-Culottes, a term originally applied by the French aristocrats to the revolutionary leaders in 1793, and afterwards adopted by the latter as a title of honour.

Sanskrit is the language of ancient East India, spoken by the Brahmins, and existing in early Oriental literature. As written in India at the present day the Sanskrit alphabet comprises 47 letters—24 vowels and 23 consonants. The language is still spoken in certain parts of southern India.

Saponin, a compound obtained from the soapwort root, and from certain barks, seeds, and plants. It is utilised to some extent as a bronchial remedy, and in its pulverised form induces excessive sneezing.

Sappan-Wood, the timber of a tree attaining a height of from 30 feet to 40 feet, abundant in Ceylon and the East Indies. It is chiefly of value as yielding a red dye.

Sappers and Miners, the name given originally to members of the regiment of Royal Engineers.

Sapphic Verse, a metric form of verse said to have been invented by Sappho, the lyric poetess of Mitylene, who flourished about 600 B.C. This verse consists of five trochees, the second of which is a spondee, and the third a dactyl.

Sapphire, a valuable deep blue stone, next in hardness to the diamond, found mostly in India, Ceylon, and Northern Italy.

Saracens, a band of Bedouin Arabs, who in the Middle Ages were employed with considerable success by the Emperor Valens against the Goths. In the 6th century they became Mahomedans, and in the 8th conquered Spain. Later, the term Saracen was used to indicate the non-Christian races generally against whom the Crusades were directed.

Sarcine, a white crystalline solid found in animal tissues and juices.

Sarcophagus, the name given to a stone coffin, such as was used by the ancient Egyptians, Greeks and Romans, and receiving the remains of their famous dead. These sarcophagi were often decorated with rich carvings and sculptures.

Sardine, formerly supposed to be a distinct species of fish, but now conclusively proved to be the young of the pilchard. They abound in the Mediterranean and on the Norwegian coasts, and form a valuable table commodity, being largely preserved in oil and other substances for British, Continental and American consumption.

Sardonyx, a species of agate comprising layers of alternating brown, red, white, and other colours. It is much esteemed as a gem.

Sarracolla, a valuable ornamental marble occurring near Sarrancolin in the Aude Valley, France. It is vari-coloured, with yellow predominating.

Sassanides were a dynasty of Persian rulers descended from Artaxerxes. They reigned from 226 to 652.

Sesquioxide is a native boric acid of a yellow white colour, occurring as a deposit in the water from the hot springs of Tuscany.

Satellites are small planets revolving round the larger ones. The moon is the earth's only satellite. Saturn has eight.

Satin, a silk fabric of glossy surface of a velvety texture, once very fashionable for dresses, but now little used except for trimming purposes.

Satin-Bird, the famous "bower bird" of Australia so named from its habit of constructing a bower-like nest; has a glossy black plumage, with the under parts yellow.

Satinwood, the timber of a tree plentiful in India and Ceylon, and valued for cabinet work. It is of fine grain and very hard. Varieties also exist in the West Indies, Florida and Tasmania.

Satrap, the name given in ancient times to a Persian Governor of a Province.

Saturday, the seventh day of the week (the Jewish Sabbath), derived its name from Saturn, or, as some hold, is called after the Saxon idol, Saterne, which was worshipped on this day.

Saturn, a planet, the sixth from the Sun, from which it is distant about 872 millions of miles, and around which it makes a revolution in 10,759 days. It is about 77,230 miles in mean diameter, or ten times as large as the earth, and rotates on its axis in ten and a quarter hours. It is surrounded by a series of rings apart from, but revolving round, the planet. It has eight satellites.

Saturnalia, festivals held in ancient Rome in honour of the god Saturn. They were made the scene of the most boisterous festivities, and were continued for several days about the middle of December.

Saurostees, the name given to a genus of fossil cetaceans discovered in the Tertiary formation of South America.

Savings Bank. (See **Banking** in "Business.")

Savoy Palace, in London, between the Strand and the Thames, was originally built in the 13th century by Peter of Savoy. It was burnt in the Wat Tyler Rebellion in 1381, and afterwards restored and converted into a hospital in the reign of Henry VII. It was here that the famous but fruitless Savoy Conference was held between the Church and the Presbyterian Party in 1661. The ancient chapel of the Savoy was burnt down in 1864, but rebuilt the following year.

Saw, a tool said, by Pliny, to have been invented by Dædalus, and fashioned in imitation of the jaw-bone of a snake. Saw-mills date from the 15th century, in Madagascar, Breslau, but they were not introduced into England before the 17th century, and even then met with great opposition. The circular saw was invented in the 18th century.

Sawfish, a sub-tropical fish whose snout often attains the length of several feet, and is provided with saw-like projections which render it dangerous even to the whale itself.

Saxons, a Teutonic race originally inhabiting what is now Holstein. It was from this people that the conquerors of England sprang in the 5th century.

Scald, the name of the Norse poet who was somewhat analogous to the bards of Wales. Their office was to celebrate the achievements of their warriors and leaders.

Scandalum Magnatum, a law passed in 1379, prescribing certain punishments to such as circulated scandalous statements concerning peers, Ministers, and other public functionaries.

Scapular, a vestment hanging from the shoulder to the knees, worn by members of certain Roman Catholic orders. The name is also given to two small pieces of cloth worn over the shoulders by lay members of the church in honour of the Virgin.

Scarabæus, a genus of beetles widely distributed through Africa and Asia and the inner parts of Europe. It is to this genus that the "Sacred Beetle" of the Egyptians belongs, and numerous representations of it are found on ancient monuments.

Seal, a small Anglo-Saxon coin, circulated in the 7th and 8th centuries, and worth nominally a penny; struck sometimes in silver.

Seiphiæ, a sect of philosophers founded by Pyrrho in ancient Greece 324 B.C. Their philosophy consisted in general doubt concerning everything.

Sceptre, the staff or rod constituting the symbol of supreme authority. Tarquin, the elder, was the first

- Roman to assume the sceptre in 468 B.C. The French kings of the 5th century made a golden rod their sceptre.
- Schiedam**, a kind of gin, commonly called Hollands, manufactured at Schiedam, from the juice of the juniper berry and malt barley.
- Schism** was constituted a punishable offence in 1753. Bolingbroke introducing a law "to prevent the growth of schism and for the further security of the Churches of England and Ireland as by law established." Teachers were required to conform to the Church. The Act was repealed in 1759.
- Schist**, the geological name of certain rocks in closely parallel layers, the mica schist being the most important. Quartz is a main constituent.
- Schoolmen**, or **Scholastic Philosophers**, were a body who, in the Middle Ages, devoted themselves to the study and exposition of difficult questions of religious inquiry, and attempted to reconcile the teaching of the Church to the dictates of human reason. Amongst the chief Schoolmen were Archbishop Anselm, Albertus Magnus, Thomas Aquinas, Peter Lombard, and Duns Scotus.
- Schooner**, a small two-masted vessel with fore and aft sails. Some also carry top-sails. The schooner is a favourite sailing vessel on account of its speed.
- Scorpion**, a large form of spider, in structure not unlike a lobster. It is only found in hot climates, and often attains a length of 6 or 7 inches. The tail is provided with a venomous sting, which, though seldom fatal, causes extreme pain.
- Scotists** were followers of the Schoolman, John Duns Scotus, who propounded certain moral laws and doctrines which were somewhat at variance with the teachings of the main body of Schoolmen.
- Scouts**, **Boy**. This movement, founded by Lieut.-Gen. Sir K. Baden-Powell "to help the boys of whatever class to become all-round men," has been developed with great spirit and success. There is a membership of over 100,000 in the United Kingdom, and of 150,000 in other parts of the Empire. The movement has been extended to girls.
- Scruple**, in English apothecaries' weight, comprises 20 grains, or the third of a drachm. In ancient Rome a scruple was the 24th part of an ounce, and also indicated a surface and a time measure.
- Sculpture** is believed to have originated in Egypt, and Pliny refers to a school of statuary at Sicyon about 550 B.C. Lysippus was appointed sculptor to Alexander the Great 320 B.C. The greatest of the Grecian sculptors were Phidias (480 B.C.), Myron (480 B.C.) and Praxiteles (350 B.C.). The Romans did not cultivate sculpture with any special success, and it was not until the Art revival of the Middle Ages that it was earnestly taken up again. It was Michael Angelo who carried Italian sculpture to its highest point in the 16th century. Not until the 18th century did England produce any particularly striking sculpture, and even then the art was mainly represented by foreigners. The chief English sculptors since then have been Flaxman, Chantrey, Westmacott, Gibson, Foley, Woolner and Thornycroft. Canova, in Italy, and Thorwaldsen, in Denmark, were among the greatest sculptors of the 18th century, and at the present day Rodin holds the highest rank among French sculptors.
- Seutage**, or **escuage**, was a feudal tax levied on lands subject to knight service, the service being exercised in lieu of paying the tax.
- Seythians**, nomadic people of ancient times, originally inhabiting the Steppes of Russia, but subsequently occupied a part of India.
- Sea Eagle**, a large genus of Eagles, consisting of seven species, two of which occur in Europe. They live on fish and carrion and sometimes seek their prey among living animals.
- Sea Elephant**, a curious species of seal, the males of which possess a proboscis a foot or more in length. They are found on the coast of California, and in certain parts of the Southern Ocean, and have a commercial value for their blubber.
- Sea Horse**, a rather common sea-fish, very numerous in the tropics and comprising some 20 species. Their bodies are ringed and they have prehensile tails. Their heads are horse-shaped, and they swim in a vertical position.
- Seals**, or **Signets**, have been in use from the remotest times. Some impressions of seals of Saxon kings are in the British Museum. The Great Seal of England was first used by Edward the Confessor, and it is the Great Seal that is used on the writs summoning Parliament, and for sealing all State documents of importance. The Lord Chancellor is the official custodian of the Seal.
- Sea Mouse**, a genus of Annelids of the Aphrodite family, of oval shape and some 8 or 9 inches long, and iridescent. They are covered with fine hairs, and in some species are barbed and bristled.
- Seasons** comprise the four natural divisions of the year, and are due to the inclinations of the earth's axis to the plane of the elliptic. (See *Equinox*.) The spring season is entered about the 21st March, autumn September 22. The summer and winter seasons are governed by the solstices (which see), and begin respectively about June 21 and December 22.
- Sea Urchin**, a curious kind of echinoid encased in a calcareous globular shell, covered with spines which are used both for defence and locomotion.
- Se-Baptists** were a sect of the 17th century, who held that baptism was sufficiently fulfilled by a man baptising himself.
- Secretary Bird**, so called because of the quill-like plumes about its ears, is a bird of prey common in Africa, and of considerable service as an exterminator of snakes. It is a large bird about 4 feet in height.
- Secularism** describes the principles first advocated by Bradlaugh, Holyoake and others, not in opposition to Christianity, but apart from it, and deals with matters of human welfare and utility, ignoring altogether theological questions.
- Sedan Chairs** were first made at Sedan in France in the 16th century, and introduced into England in the reign of James II. They were in general use in the 18th century, when they were the usual means of carriage for ladies and gentlemen. They were borne on two side poles by a couple of bearers, and only accommodated one person.
- Sedgemoor, Battle of**, was the deciding battle of the Monmouth Rebellion, and was fought on July 6th, 1685, at Sedgemoor in Somersetshire. The Duke of Monmouth was made captive, and afterwards tried and beheaded.
- Sedition**, the incitement to opposition to the governing power, was formerly severely dealt with. A Sedition Bill was passed in 1795, and for the next quarter of a century this statute was much in evidence to put down seditious writings, meetings, and assemblies. In later times numerous prosecutions for sedition have taken place in Ireland.
- Seismometer**, an instrument for measuring the force of earthquake shocks, is in its present improved form the invention of Messrs. Ewing and Grey. It is a clockwork apparatus, with a duplex pendulum, and records the direction and velocity of seismic waves.
- Selden Society**, for the study of English legal history, was founded in 1867.
- Selenium**, a non-metallic element of a dark red colour, and solid, found associated with sulphur, iron, pyrites, etc., though only in small quantities. It possesses strong electric resistance, and is valuable in the construction of electrical instruments.
- Self-Denying Ordinance** was a measure passed in 1654, providing that no member of Parliament should hold military or civil office, and was forced through the House of Commons by Cromwell, in order to deprive the Earl of Essex and other Presbyterians of power.
- Seminole**, a tribe of North American Indians originally located in Florida, but now for the most part living on reservations in the Indian Territory. Up to 1840 they gave the United States Government much trouble, and several campaigns were necessary before they were subdued.
- Semitic Languages** are divided into two sections: one including the Assyrian, Aramaean, Hebrew and Phœnician groups; the other embracing the Arabic and the Ethiopian. The Arabic is the most copious,

the Aramæan the poorest; the Hebrew standing in an intermediary position.

Senate, the higher governing Assembly of a Legislature. The Senate of Rome originally comprised 300 members, all of whom were patricians. The number was increased from time to time, and under Julius Cæsar reached 900. The French Senate dates from 1799; the United States Senate from the establishment of the Republic.

Seneschal, a high official of a royal or noble household, the title originating in France in the 10th century, and being afterwards adopted in England and other parts of Europe.

Separatists, the name given to the Dissenters in the time of Charles II., who pressed several severe measures against them. In recent times the term has been applied to the Irish Home Rule Party.

Sephardim, the name of the descendants of those Jews of Spain and Portugal who left those countries in the 15th and 16th centuries to avoid the persecutions of the Inquisition.

Sepia, a pigment prepared from a black secretion of the cuttle-fish. In the East it is used as a writing ink, but in this country is best known as a colour, which is formed by its being treated with caustic lye.

Sepoys, native Indian troops under the command of British officers. The name dates back to the 16th century when the Prince of Sind had a bodyguard of natives dressed and armed like Europeans. The Sepoys comprise over 150,000 men, the Imperial Indian army containing about half the number.

September, the ninth month of the year, and the seventh of the old Roman calendar; hence the name, from *Septimus*. The designation was several times changed by the Emperors, but none of the new names survived for long.

Septemberists, were those who took part in the massacre of prisoners in Paris in September, 1792.

Septuagesima Sunday is the third Sunday before Lent.

Sequin, a gold coin of Italy, notably of Venice, which circulated from the 13th to the 18th century. It was worth about 9s. 3d. English.

Serfs, the name given to the slaves formerly existing in Russia, who answered to the condition of the feudal "villeins" of England. They were attached to the soil and were absolute property in all sales or leases. They were the transferred property of the landlords. In 1861 the whole of the serfs in Russia were emancipated. Serfdom existed in Prussia down to 1792, in Denmark to 1766, and in the German hereditary States to 1781.

Serge, a mixed worsted cloth much used for male and female garments, and of considerable durability.

Serjeants at Law, the highest degree of barrister-rank formerly existing in England; until 1823 it was necessary for all Common Law Judges to be Serjeants before their elevation to the Bench. This obligation was abolished by the Judicature Act of that year, and no Serjeants have been made since 1828.

Serval, a small carnivorous animal of the lynx order, with black spots on a tawny ground. It is numerous in Africa, preys upon the smaller animals of the deer family, and is sometimes styled the "Tiger Cat."

Settlement Act, of 1680, was passed in 1680, with the object of limiting the Succession to the British Throne to Protestants.

Seven Champions of Christendom, as set forth in mediæval literature, were St. George of England, St. Andrew of Scotland, St. Patrick of Ireland, St. David of Wales, St. James of Spain, St. Denis of France, and St. Anthony of Italy.

Seven Churches of Asia, referred to in the Revelation of St. John, were those of Ephesus, founded by St. Paul in 57, Smyrna, Pergamæ, Thyatira, Sardis, Philadelphia (now Allah Shahr) and Laodicea.

Seven Sages (or Seven Wise Men of Greece), regarded as the chief philosophers of the age before Solon of Athens; Thales of Miletus; Pittacus of Mitylene; Bias of Priene; Chilo of Sparta; Cleobulus of Lindus; and Periander of Corinth.

Seven Sleepers, of the ancient legend, took refuge from the wrath of the Emperor Decius in a mountain

cavern, when they were made to sleep for 300 years. A festival to celebrate their awakening is kept in the Roman Church on 27th July.

Seven Wonders of the World were: 1, the Pyramids of Egypt; 2, the tomb of Mausolus, King of Caria (hence the word mausoleum); 3, the Temple of Diana at Ephesus; 4, the Walls and Hanging Gardens of Babylon; 5, the Colossus at Rhodes; 6, the Ivory and Gold Statue of Jupiter Olympus; and 7, the Pharos, or Watch Tower built at Alexandria by Ptolemy Philadelphus, King of Egypt.

Seven Years War was that waged by Frederick the Great and England against Austria, France and Russia, from 1756 to 1763. It resulted in the secession of Silesia to Prussia, of Canada to England, and in the strengthening of our Indian Empire.

Sewing Machine, a machine for stitching cloth or other materials, and operated by manual, steam, or other power. Many attempts were made to produce such a machine between 1780 and 1840, but the first really practical invention of the kind was that of Elias Howe, an American, in 1841. Other sewing machines were afterwards introduced, and many improvements have been effected.

Sexagesima Sunday is the second Sunday before

Sextant, an instrument which has superseded the quadrant as a measurer of angles between distant objects. It is of special importance in navigation and surveying, and contains 60 degrees described on a graduated arc. A small telescope is attached, and there are also a couple of mirrors which reflect the distant objects so as to enable them to be accurately observed. It was invented by Hadley in 1731.

Shad, a common sea-fish of the herring kind, abounding on the British coasts and ascending the rivers for spawning in the spring. Its back is dark blue, with silvery sides.

Shagreen, shark's skin; also a leather of peculiar grain made from skins of wild asses, camels, horses, etc., and mostly manufactured in Astrakhan and Asia Minor.

Shake, a musical term, signifying a vibrant effect produced by the rapid trilling of two notes.

Shakers were originally an English sect who emigrated to America in 1772, and under the leadership of Ann Lee established themselves in a community at New Lebanon, in New York State. They practise celibacy and oral confession, hold goods in common, and reject baptism and the Lord's Supper. Dancing constitutes a part of their worship.

Shalloon, a kind of cloth manufactured from wool and worsted, and used chiefly for women's dresses and coat linings. It gets its name from the fact that it was originally made at Chalon.

Shamrock, wood-sorrel, the three-leaved plant native to Ireland and the national emblem.

Shark, a large and powerful ocean fish, comprising many species, very widely distributed, but most numerous in tropical seas. They have formidable teeth and are the most carnivorous of all fishes. They usually attain a large size, the whale-shark being often of a length of 50 feet. Commercially the shark yields shagreen from its skin, the fins are made into gelatine, and an oil is obtained from the liver.

Shawls are loose coverings worn by women over their shoulders and were introduced into Europe from the East. They are made of various materials, wool, silk, cotton, etc., or of mixed fabrics, and those from Cashmere, India, are famed for their beauty of colour and design. At one time these were very fashionable, as were the shawls made at Paisley for the great part of the 19th century.

Sheep, a well-known family of ruminants of great utility as wool-producers, and for food. From the earliest times sheep have been a source of wealth to England. So much were they valued in the 15th and 16th centuries that their exportation was frequently prohibited. The chief English varieties are the Leicester, Cotswold, Southdown and Cheviot breeds.

⁶ Of the foreign breeds the most valued are the Merino sheep of Spain, which yield a fine long wool. At the present day Australia and the Argentine are the largest wool-producing countries in the world.

Sheldrake, a genus of ducks, one of which, the common sheldrake, is an inhabitant of this country. It is a beautiful plumed bird with white neck, light red body and black head. Another species, the ruddy sheldrake, a native of Asia, appears in Britain only occasionally. See *Pear's Dictionary of Poultry and Cage Birds*.

Sheriff, meaning the reeve or governor of a shire, has existed as an office in England from before the Norman Conquest. These county officials are now called High Sheriffs, and are nominated each year on November 12th. This office has, however, in recent times lost much of its ancient significance, though it is still usually filled by men of prominence and wealth. They are appointed by the Crown upon presentation of the judges, except in the metropolis, where the citizens retain the right of electing sheriffs for London and Middlesex. Ordinarily the term is applied to officials acting as High Bailiffs.

Shibboleth was the test word which Jephthah used to distinguish the Gileadites, his own men, from the Ephraimites as they passed the Jordan. Such as would not give the word were refused passage. The term is now frequently used to designate any special watchword or party phrase.

Shield, a weapon carried on the arm by soldiers before the invention of firearms, mostly made of metal, leather, or wood. In heraldry the term implies a shield-shaped escutcheon, forming the ground on which arms are displayed.

Shilling has been an English coin from Saxon times, but it was not of the value of 12 pence until after the Conquest. The present style of shilling dates from the time of Henry VII.

Ship-money, first levied in the 11th century, was re-imposed in a very burdensome form by Charles I. in 1634-6, and was the immediate cause of the Civil War. London was assessed in 7 ships of 4,000 tons and 1,600 men, and other places in like proportion. Hampden was the first prominent man to refuse to pay the tax, and there was a general disposition to support him. The Long Parliament declared it to be illegal and in the reign of Charles II. it was ultimately abolished.

Ships have existed from prehistoric times. There is mention of one that sailed from Egypt to Greece in 1265 B.C., and in 786 B.C. the Tyrians built a double-decked vessel. No double-decked ships were known in England, however, before the *Royal Harry* was built by Henry VII., and it was not until the 17th century that shipbuilding was carried on in this country as a prominent industry.

Ship-worm, a peculiar bivalve mollusc which possesses the power of boring its way through the timber of ships and other wood, and is highly destructive.

Shirts do not seem to have been generally worn in Europe before the 8th century. According to Stow woollen shirts were worn until about 1233, when linen of a coarse kind, then first manufactured in England by Flemish weavers, was adopted.

Shoddy, the name given to a kind of cloth mainly composed of woollen or worsted rags, torn up and re-fabricated by powerful machinery. It was first made at Batley in Yorkshire about 1813, and in later times has become a very important industry employing many thousands of people at Batley and the neighbouring town of Dewsbury.

Shoes, as covering for the human foot, have been worn from the earliest times. They are referred to in the Bible and early historical records. The shoes of the Jews were made of wood, rush, linen, or leather. Pythagoras directed his followers to wear shoes made from the bark of trees. The Romans were the first to set the example of costly shoes, and introduced various decorative adornments of ivory and precious stones. In the Middle Ages fashion played some fantastic tricks with shoes, and in England, about the middle of the 15th century, shoes with such long points were worn that they had to be tied to the knees for convenience of walking; the dandies used silver chains for the purpose. It was about 1623 when shoes of the present form were introduced, and in 1668 the buckle came into use as an ornament.

These continued in vogue up to the 19th century, before which period shoes were not made "right" and "left."

Short Parliament, that of Charles I. in 1640, lasting only three weeks.

Shot, the name given to solid projectiles fired from guns. In the time of Henry V. stone shot was used, later leaden shot, then iron shot, and finally steel shot, which was introduced by Sir Joseph Whitworth, and is now very generally adopted.

Shrike, the name of an extensive group of birds, mostly inhabiting Africa and South America. The shrike is commonly called the "Butcher bird," and is of sober plumage. It preys upon small animals and birds, and from the effective way in which it kills its victims gets its common name. Four species, of which the red-backed shrike is the most numerous, are visitors to England.

Shrimp, a sea crustacean of the lobster family, is found in great numbers in the shallow places of our coast.

Shrove Tuesday, the day before the first day of Lent, receiving its name from the old custom of shirring, or making confession, on that day. In England the day has always been associated with the making of pancakes.

Sigylæ or **Sibyllæ**, women reputed to be inspired, who flourished at different periods in various parts of the world. Pliny, Plato, Ælian and Varro speak of some of these weird creatures; and an Erythraean Sybil, who offered books of destiny for a large sum to Tarquin II., is famous in classic story.

Sicilian Vespers, the term applied to the terrible massacre of French people in Sicily in 1282. The French were then in occupation of the island, and had been guilty of many cruelties. On Easter Monday at Palermo in the year named, by a preconcerted signal, a general rising began on the stroke of the Vesper Bell, and spread through the whole island, 8,000 persons being killed in Palermo alone. The result was the supersession of French by Spanish rule.

Siderostat, an instrument invented in 1868 for observing the light of the stars on the principle of the Camera Obscura.

Siegenite, a variety of Cobalt Linnæite of a nickeliferous quality, found at Siegen in Prussia.

Signals, for conveying information or warning to ships of sea, were not in much use in any English fleet before the time of Elizabeth. Flags are now in most general use, and a very elaborate code in connection with them is adopted, enabling words and sentences to be clearly comprehended by their varied manipulation. Other modes of sea signalling are afforded by steam jets, and at night by flashes of light. Land signalling is usually by heliograph (which see). Semaphores are the principal signals on railways, in connection with coloured lamps. The blue-signal system now in general use—which ensures the safety of a train within a given distance by not permitting another train to be on the same line of rails within that distance—has been of great service in preventing railway accidents. There are also electric, automatic, and pneumatic signals, and for times of fog explosives called fog-signals are placed on railway metals.

Sikhs, a Hindoo sect established in the 15th century, but gradually extending into a powerful race, settled mainly in the Punjab, and of an intensely military spirit. The Sikhs, under Ranjit Singh, strongly opposed the British rule in the early part of the 19th century, and many fierce battles were fought before they were finally subdued, and their country annexed in 1848. They are now amongst the most loyal of His Majesty's Indian subjects.

Silence, Towers of, are towers, usually about 25 feet high, erected by the Parves of Persia and India for the reception of the corpses of their dead. The vultures flock there and strip the bodies of flesh, and the bones fall through a grating into a pit, where they are afterwards removed for burial.

Silhouette, a form of black profile portrait, invented by Etienne de Silhouette in 1759, and formed by an outline cutting made with scissors or other sharp instrument from cloth, paper, or other flat substance.

Silicon, an important non-metallic element entering into the constitution of many earths, minerals, and metallic oxides. Next to oxygen, it is the most abundant constituent of our globe's crust.

Silk, the name given to a soft glossy fabric manufactured from the fine thread produced by the silkworm. It was known to, and highly prized by the ancients, being at one time paid for, weight for weight, with gold. The manufacture of silk was carried on in Sicily in the 12th century, later spreading to Italy, Spain, and the South of France. It was not manufactured in England before 1604; but when certain French refugees established themselves at Spitalfields in 1686, the industry was developed and became of importance. In the 18th century the Lombers of Derby achieved great success in this industry, and in recent years an important new branch of silk manufacture was established by Lord Masham at Bradford, by which what is known as "waste silk" is fabricated into plushes, velvets, etc., on an enormous scale.

Silkworm, the larva of a species of moth. It is native to China, and has been cultivated with success in India, Persia, Turkey, and Italy. The silkworm of commerce feeds on mulberry leaves, and produces a cocoon of silk varying in colour from white to orange. The cocoon is the silken habitation constructed by the worm for its entrance upon the pupa condition, and to obtain the silk the pupa is killed by immersion in hot water.

Silures, an ancient British tribe settled in Monmouth and Herefordshire at the time of the Roman invasion, and with difficulty subdued by Ostorius Scapula, the Roman General, A.D. 50.

Silver, a white precious metal, found in a free state, also in certain combinations, and in a variety of ores. The chief silver-producing regions are the Andes and Cordillera, Peru, Bolivia, and Mexico have yielded vast supplies of the metal since the 16th century, and Colorado and Nevada, in the United States, have also been very prolific in silver yield. The mines of the Comstock lode of Virginia City, Nevada, in which Mr. J. W. Mackay, the "Silver King," was interested, have been the most productive in modern times. The depreciation in silver values in recent years has greatly retarded production.

Simbil, a quaint kind of African stool, possessing a green beak tipped with red.

Simnel Conspiracy was an English historical incident of 1486, when Lambert Simnel, a baker's son, claimed to be the nephew of Edward Plantagenet, Earl of Warwick, and heir to the throne. He induced a large number of followers to join him in rebellion, but his army was defeated and he was taken prisoner, but pardoned and subsequently employed in the Royal household as a menial.

Simonians, a sect founded by Simon Magus in the 1st century, who held that the gift of the Holy Spirit was to be purchased with money.

Simony, the offence of trading in church offices, has been contrary to English law since the time of Elizabeth, and presentations made for pecuniary consideration are void. Persons making such presentation are liable to heavy fine.

Sin-eaters were people hired in certain parts of England in olden times to eat bread over dead bodies at funerals, the idea being that the eaters thereby took upon themselves the burden of the sins of the dead.

Siropia, a ferruginous earth found near Siropo on the Black Sea, and sometimes used as a pigment.

Sirgana, the scientific name of the green eckdaw of Asia. It has a bright green crest and bill and feet of coral red.

Sirius, the dog-star, so called because of its situation in the mouth of the Dog (Canis Major); it is the brightest of all the stars.

Siskin, a small bird of the goldfinch family, common in Northern regions, and of a grey-green colour. It is a lively, swift-flying bird with a very acute bill.

Sistine Chapel is the chapel of the Pope in the Vatican, renowned for its marvellous frescoes by Michael Angelo.

Six Articles, The Statute of the, was passed

in 1530 for compelling adhesion to the chief doctrines of faith:—transubstantiation, communion in one kind, vows of chastity, celibacy of the clergy, private masses, and auricular confession; and those who refused to subscribe to the Articles were treated as heretics. The Act was repealed in 1549.

Sizars, a student of Cambridge or Dublin University to whom concessions in regard to their college bills are made by virtue of their having been aided by benefactions. Similar students at Oxford are called Servitors.

Size, a gelatinous substance used as a varnish and made from shreds of parchment, glue, hides, etc.

Skate, a genus of sea-fishes, some of which attain a considerable size. They belong to the Ray family and are much esteemed for food.

Skilling, an old Scandinavian and North German copper coin, varying in value from a farthing to a penny English.

Slink, a smooth-scaled lizard, inhabiting the warmer parts of Africa. Its average length is about 5 inches, and it is prettily striped.

Skunk, a North American mammal of the weasel family, with short legs and long bushy tail, and of a black colour, with a white patch on the back. It secretes a foul-smelling fluid in a pair of glands beneath the root of the tail, and has the power of ejecting it at will; and its urine is tainted with this obnoxious fluid retains the odour for days.

Slate, a hard kind of shale rock capable of being split into thin sheets, and chiefly used for roofing purposes. The largest slate quarries are in Wales and Cumberland. Slate varies in colour from green to blue and purple.

Slavery, in its earlier forms, as in the times of the Romans, in the Feudal Ages, when vassalage and villeinage existed, and in the serfdom of Russia and other northern nations, was attended by many inhumanities and evils; but perhaps in the negro slavery system which prevailed in the British Colonies for upwards of 200 years and in certain parts of the United States up to 1865, it attained its highest point of cruelty. Since 1833 no form of slavery has existed within the British Empire.

Slings as a weapon of attack find prominent illustration in the Old Testament, as the instrument with which David slew Goliath. There were bodies of slingers in the Carthaginian and Roman armies, and slings were used as late as the 17th century when it was necessary to economise powder.

Sloop, a fore and aft rigged, one-masted vessel, carrying jib, fore-staysail, mainsail and gaff-top-sail. A sloop of war used to be a gun-carrying vessel of swift motion and great utility.

Slough, a curious family of arboreal animals, only found in South America. They dwell almost entirely in the trees, proceeding from branch to branch with their bodies hanging downwards, and live upon leaves and fruit. When on the ground they move very slowly and with much difficulty, hence their common name.

Sloyd, a Finnish system of manual training, in which pupils in the elementary schools are taught the use of ordinary tools as a preparation for later technical instruction.

Snail Industries. The rearing of snails as a food product is carried on in various European countries, especially in France and Italy. Many species are regarded as edible; but the large white snail (*Helix pomatia*) is the one generally preferred. The Romans reared this species in enormous quantities. In the United States edible snails are frequently to be seen exposed for sale; but they are not raised in that country, and have been shipped to America alive from Europe. In Vienna, again, during Lent there is a snail market, the snails coming in byre from Swabia. The great centre for the consumption of snails, however, is Paris and some of the French provinces.

Snake, an important order of reptilia, having a scaly cylindrical body, without fore-limbs, and only in some instances possessing rudimentary hind-limbs. Their locomotion is accomplished by means of the excessive mobility of their ribs, which are

very numerous. All snakes have teeth which only serve for seizing prey, and the poisonous varieties are furnished with poison fangs in the upper jaw. These fangs are perforated and the venom passes into them from glands in the skull. Snakes are only found in tropical and sub-tropical regions.

Snipe, a somewhat familiar wading bird, of which two species are found in Britain—the Common Snipe, that appears in the winter, and the Great Snipe that is but an occasional winter visitor. They are only found in marshy districts.

Snow is frozen rain formed in the upper portion of the atmosphere and taking the form of light flakes, which fall to the earth at a much slower rate than rain. All snow assumes the form of crystals.

Snap (see *Dictionary of the Tongue*).

Socialism, a word that first came into general use about 1834 in connection with Robert Owen's Communitarian Settlement at New Lanark. The idea of Socialism is joint ownership by all the members of a community of the instruments and means of production, and there are more or less Socialistic organisations in various countries. About the middle of the 19th century, Charles Kingsley and others established a form of Christian Socialism, and the late William Morris, Mr. John Burns and others founded a Socialist League in 1886. There has been a considerable expansion in the Socialistic movement in recent years, and many Socialists were returned to Parliament in 1905 and in 1910, but both the two great political parties are opposed to advanced Socialistic tenets. See **Syndicalism**.

Social Science, which deals with social conditions generally, has formed a subject of much study in recent years. In 1857 an Association for the Promotion of Social Science was organised, and has ever since continued to hold annual meetings. Lord Brougham was the first President.

Socialists were followers of Lælius and Faustus Socinus, two Siennese noblemen, who preached in the 16th century, and held that there was only one God, that Christ was mortal, and that it was unlawful for princes to make war. Many Socialian bodies still continue to exist.

Sociology, the science of human society, dealing with every form of social problem and human progress.

Soda Ash, carbonate of soda, is now mainly obtained by certain processes of manufacture from common salt. It was formerly obtained from the ashes of plants permeated with sea-salt. Bicarbonate of soda results from the action of carbonic acid gas upon soda crystals, and is a white powder much utilised for effervescent drinks, and for medicinal purposes.

Sodium, a metallic element first obtained by Sir Humphry Davy in 1807 from soda, by means of the electric battery. It is found in the various forms of salt in combination with chlorine in many minerals, and in most vegetable and animal organisms.

Soil, the upper portion of the crust of the earth, the medium from which all vegetation springs. It consists of rocky decomposition and organic matter, and is always characteristic of the rocky formation where it is found. It is either dominated by sand, or clay, or chalk, or humus.

Solar System, a general term embracing the sun, the planets and their satellites, and all celestial bodies which revolve round the sun.

Sole, a much esteemed table fish, and one of the best known members of the Marine flat-fish family. The British Common Sole is the finest in food quality, and after that comes the Lemon Sole, which is very abundant in the English Channel.

Sollitor (see *Attorney*).

Solstice, an astronomical term indicating the point at which the sun is most distant from the equator, which occurs about June 21st, when the Summer solstice is entered, and December 22nd, for the Winter Solstice.

Somerset House, a large Government building stretching from the Strand to the Thames at the corner of Waterloo Bridge, and comprising the headquarters of the Inland Revenue and various other offices and registries. It was built towards the end

of the 18th century on the site of an old palace which had belonged to the Protector Somerset.

Sonnet, a favourite form of short poem in which Shakespeare, Milton, Wordsworth and Keats especially excelled. It consists of fourteen decasyllabic lines, and is said to have been invented in the 11th century by Guido d'Arezzo.

Soot, a black substance deposited from fuel, gas or other flame, in combustion, and adhering to the sides of any aperture through which the smoke, which is its principal constituent, may pass. It forms a useful manure, and is also of some value as a medicine.

Sophists were the first Athenian teachers of philosophy in the 5th century B.C., who were supposed to base their reasoning on false premises, sacrificing much to mere quibble of rhetoric. They were denounced by Socrates and avenged themselves upon that philosopher by plotting against him. Plato and Aristotle also railed against the Sophists, and the term "Sophism" has in later times been generally applied to fallacious arguments.

Sorcerers were sufficiently numerous in the middle of the 16th century to have severe laws passed against them, and in 1603 James I. made it a capital offence to pretend to gifts of sorcery or witchcraft.

Sound. (See *Acoustics*).

Soundings at sea, to determine its depth at any point, have been taken in all seas, with the result that the ocean's depths have been defined with considerable accuracy. The deepest reading was that of the *Challenger* Expedition in 1873, near St. Thomas's in the North Atlantic, when 3,875 fathoms were sounded. The sounding is accomplished by lead and line.

South Sea Bubble, a project entered upon in 1701 as financial speculation by what was called the South Sea Company. Harley, Earl of Oxford, who was then in power, conceived the idea of utilising this project for getting together a sufficient sum to pay off the National Debt, then standing at about £30,000,000. The company contracted to redeem the whole debt in 25 years on condition that they were granted a monopoly of the South Sea trade. The idea fascinated the public, fabulous profits being dreamt of, and there was an immense demand for shares, which ran up in value from £100 to £1,000. All classes, joined in the gamble, but by the wise policy of Sir Robert Walpole the fraud was exposed in 1720, when the whole scheme collapsed and thousands of people were ruined.

Sovereign, a British gold coin worth 20s. It was first coined in 1489, and has ever since remained the principal coin of the realm. Its weight is fixed at 123.27447 grains troy, and it consists of 22 parts of pure gold to 2 parts of alloy.

Sparrow, the most familiar of all British birds both in town and country. It is a member of the Finch family, and is hardy and prolific. It was not known in the United States until 1879, when a few birds were introduced, and now it abounds in all parts of the country.

Sparrow-Hawk, a member of the Falconidae family, of which six species only are known, one of which is a native of Britain, and one of the best known of birds of prey. It is from 10 to 12 inches long and of an ashy hue.

Speaker of the House of Commons, an official who presides over the deliberations of the Lower House of Parliament. The first Speaker was Peter de Montfort, 1260, but the first regular official to bear the title was Sir Peter de la Mare, 1376. Since 1857 there have been four Speakers—John Evelyn Denison (afterwards Viscount Ossington), from 1857 to 1872; Sir H. W. B. Brand (afterwards Viscount Hampden), 1872 to 1884; Arthur Wellesley Peel (afterwards Viscount Peel), from 1884 to 1895; and W. C. Gully (Viscount Selby), from 1895 to 1905. The present speaker is Mr. J. W. Lowther.

Spectacles are said to have been invented about 1285 by a Florentine monk, Alexander de Spina. The invention, however, is also claimed for Roger Bacon and others. The lenses of spectacles are made either of glass or pebble (rock crystal).

"Spectator," Addison's famous periodical publication, was first issued on March 1st, 1711, the last issue being December 30th, 1714. The bulk of the papers were contributed by Addison and Steele. A review of the same name started in London in 1833, one of the ablest papers of its class.

Spectroscope, an instrument for forming, investigating, and ascertaining the composition of spectra of luminous bodies. It consists of a tube through which the light enters to a collimating lens, and then through the prism under investigation, a telescope serving the purpose of examination instrument.

Spectrum, the name applied to a colour or band of light reflected from the sun or other luminous body through a small hole or slit refracted by a prism, and resulting in an intermingling of various colours—violet, blue, green, red, orange, yellow, indigo. Newton was the first discoverer of the phenomena, and in later times experiments have led to various chemical discoveries.

Speculum Metal is a white hard substance formed of one part of tin with two parts of copper. From its high polishing quality it is much used for the reflecting surfaces of telescopes.

Spelling Reform is a subject which has many distinguished supporters—philologists and men of letters—and the "Simplified Spelling Society," whose aim is to bring about a system of spelling which shall represent the actual pronunciation of each word, and numbers over 2,000 members, including Sir James A. H. Murray, Viscount Bryce, Sir William Ramsay, and Andrew Carnegie, is actively engaged in spreading the new spelling propaganda.

Spermatozoa, the infinitesimal organisms constituting the generating element in male animals, and possessing the power of fertilising the female ovum.

Spiders were formerly classed as insects, but are now included with the animals of the Arachnida class. They have eight legs, breathe through pulmonary sacs, have six to eight eyes, and in most species spin webs composed of a viscid fluid.

Spinnet, a keyed instrument of the 17th century, something like the harpsichord.

Sponge, a marine organism of a low order, comprising a series of aggregated amoeba-like animals. While the sponge lives a current of water circulates through the main apertures. It is the dead skeleton of this mass that forms the sponge of commerce.

Spoonbill, a large white bird of the Heron family, remarkable for its broad, flat, spoon-shaped bill. It inhabits tropical regions.

Sprat, a sea fish of the herring order, plentiful on all European coasts. It averages from 3 to 4 inches in length. It frequently does duty for the preparation of "anchovy" paste, as its fry does for whitebait.

Spruce have been used by horse riders from ancient times, and in the feudal period a knight was allowed to wear gilt spurs and an esquire silver ones.

Squirrels of which there are over 200 species, are not found in Australia, but in most other parts of the world are abundant. They are all of arboreal habits, and feed on vegetable substances. The Common Squirrel of Britain is a fair representative of the entire family.

Stag, a large species of deer, still to be found in its wild state in the forest regions of Scotland, and kept as a domestic animal in many parks. It has large curved antlers, and is altogether a noble-looking animal, giving capitalists when hunted.

Stage Coach (see *Mail Coach*).

Stalactites are calcium deposits formed on the roofs and sides of limestone caves, and in tunnels, under bridges, and other places where the acid of rain-water percolates through and partly dissolves the limestone, resulting in the growth of icicle-like forms that often assume groupings. The water that drops from these and rests upon the ground is called *stalagmitic*, which accumulates and hardens into a series of sharp mounds or hillocks.

Stamp Duties were first imposed in 1670-1, and applied to certain legal documents only. An important extension of the Stamp Duty was effected in 1711 by the Newspaper Stamp Tax, which was continued in one form or another until 1855. Stamps on Notes

or Bills of Exchange date from 1720. Since 1865 all fees in the Superior Courts are collected by stamps.

"Standard," a Conservative morning newspaper started in 1827, and an evening issue dating from 1827. These papers were acquired by a Limited Company, headed by Mr. C. A. Pearson, when the *Evening Standard* absorbed *The St. James's Gazette*.

Standard, Battle of the, fought near Northallerton in Yorkshire in 1138, between the Scots and the English, got its name from the fact that the English forces carried a sacred standard. The Scots led by their king, David, were defeated.

Starch, is an organic compound occurring in granules in nearly all green plants, and especially in the seeds of dicotyledonous and cereal plants, potatoes, rice, etc. In its pure form starch is a tasteless, odourless white powder, and is a carbohydrate consisting of carbon, hydrogen, and oxygen. It enters largely into various kinds of foods.

Star Chamber, an ancient Tribunal of State in existence in 1486 and possibly earlier, charged with the duty of trying offences against the Government, unfettered by the ordinary rules of law. It was in effect a Privy Council entrusted with judicial functions, and the present Judicial Committee of the Privy Council to some extent represents the older Tribunal. Under Charles I. the Star Chamber was used by the King and his party in the most unjust manner to persecute their opponents, and became such a scandal that in 1640 it had to be abolished.

Starling, a well-known European insectivorous bird, one species of which is common in Britain. It nests in holes and crevices, and is a familiar object on roofs and chimneys in various parts of the country. It has a light-coloured bill and black plumage.

States General of France consisted of three Orders, the Clergy, Nobility, and Commons, and constituted a sort of Privy Council. Louis XVI. summoned the States General to Versailles on 5th May, 1789, when the body comprised 308 Ecclesiastics, 285 Nobles, and 621 Deputies. That was the occasion on which the Deputies assumed the title of "The National Assembly," with but one House.

Statues. (See *Sculpture*).

Staurolite, a silicate of aluminium and iron found in brown prismatic crystals. Rocks of staurolite slate occur in Scotland and the Pyrenees.

Steam, the vapour derived from water heated to boiling point, and of great service as a motive power, possessing an immense elasticity of force, enabling it to be applied to many industrial purposes.

Steam Engine, a machine whereby steam becomes the active agent of the working of machinery, and of very wide application. The leading types of steam engine are: (a) condensing, or low-pressure engines, where the steam is generated by a boiler; (b) non-condensing, in which the cylinder exhausts its steam into the open air. Engines of the latter type are used where portable engines are required.

Steam Hammer, invented by James Nasmyth in 1830, and proved of great utility in the development of the iron trade. The hammer itself, which is fixed to the end of a piston-rod passing through the bottom of an inverted cylinder, often weighs as much as 30 or 200 tons, and is so perfectly controlled by the steam power that its action can be so accurately gauged that it could be made to crack the glass of a watch without actually breaking it, or brought down upon a mass of molten iron with a force representing many hundreds of tons.

Stearine, is the portion of fatty matters and oils which remains solid at an ordinary temperature, and is a compound of stearic acid with glycerine. It is largely used in the manufacture of candles and for other commercial purposes.

Steel, the variety of iron that has been in general use from the earliest times, but how and where first manufactured remains a mystery. Carbon is regarded as an essential element in steel, other ingredients present being silicon, manganese, sulphur and phosphorus. The oldest method, and the one now generally adopted for the manufacture of steel, is that known as the "cementation process," but the

most important method of all was introduced by Sir Henry Bessemer in 1856. This is known as the "Bessemer process," which consists in first burning all the carbon out of pig iron, and then putting back into it a sufficient quantity of carbon to produce steel containing the required proportion of this element. The metal produced by this process is called "Bessemer steel," which is of the highest value for structural purposes, rails, etc. For the manufacture of tools and weapons steel is indispensable. The United States, Great Britain and Germany are the leading countries in the world in steel production.

Steel Yard, was a sort of exchange which existed in Cannon Street, London, from the 13th to the 16th centuries. It was the chief resort of the Hanse merchants and the Flemings, to whom many privileges in regard to the exportation of English goods to the Continent were given.

Stenography, the art of short-hand writing, was practised by the ancients, but was not in use in England before the 16th century. The systems invented in the 18th century were numerous, but the one that was most widely adopted was that of Mason, as improved by Gurney. In 1837 Pitman's phonographic system was first announced, which was a decided advance on any previous system, establishing a simple series of phonetic signs, that was easily learned and admitted of great abbreviation. This is the system in general use to-day. Its inventor received the honour of knighthood.

Stethometer, an instrument by which the specific gravity of liquids can be ascertained. It was invented by M. Say in 1797.

Stereoscope, an optical instrument invented by Professor Wheatstone and afterwards considerably improved. It blends into one picture two plane representations of things seen by each eye separately, which has the effect of seeming to throw natural objects into relief. It was only after photography was utilised in connection with the stereoscope that it became of special significance.

Stereotype, a metal cast taken from movable type which has been set up in the ordinary way. The first to introduce the process in practical form in this country was William God, of Edinburgh, who made stereotype plates in 1730. An impression of the type matter is first taken by means of a mould of prepared plaster of Paris or moistened sheets of specially prepared paper, and when molten stereo metal is poured upon the mould and allowed to cool and harden, the stereo plate is formed, and can be printed from as a solid block indefinitely.

Stethoscope, an instrument by which the action of the heart and other organs of the chest can be heard and gauged. It was invented by Laënnec, of Paris, in 1816, and consists of a cylinder, one end having a funnel-shaped opening which is placed against the chest, while the other end is held to the listener's ear. There is also a binaural stethoscope, which has two India-rubber tubes for the ears.

Stirrups, a support for a horseman's feet, usually having a metal loop at the bottom. They are attached to saddles, and were not in common use before the 13th century.

Stocks, an instrument of punishment, consisting of a framework of wood, with holes through which the offender's feet are put, he being compelled to sit in that position for the prescribed time. Much used in olden times, but now practically abolished.

Stoics were the followers of Zeno, a Greek philosopher of the 4th century B.C. They received their name from the fact that they were taught in a porch. Zeno's doctrine was that happiness was only attainable by living agreeably to nature and reason, and that God was the Soul of the World.

Stonehenge, a remarkable collection of huge stones arranged in two circles, and covering an area of 20,000 feet in circumference, situated on Salisbury Plain. The general inference is that these stones are the remains of an ancient Druidical Temple, though some maintain that they are of Roman origin.

Stool of Repentance, a seat placed near the pulpit in Scottish churches in former times, on which

persons guilty of moral lapse were ordered to sit in expiation during service.

Stork, a family of heron-like birds with long bills, freely distributed over Europe, Asia and Africa, and inhabiting marshy regions. The White Stork is an occasional visitor to England, and, more rarely, the Black Stork; these are the only two European storks.

Storthing, the Norwegian legislative assembly, dates back to 1223, when the first Storthing was held at Bergen by Haco 5th.

Strathspey, a Scottish dance of the reel class, getting its name from the fact that it originated in the valley of the Spey.

Strontium, a metallic element existing chiefly as celestine and strontianite. The native carbonate of Strontia was discovered at Strouan, in Argyleshire, in 1787, and in 1808 Sir Humphry Davy first obtained from it the metal Strontium. It is much used in the preparation of fireworks.

Stucco, a mixture composed of plaster of Paris mixed with a solution of glue, and much used in architectural decoration. It was known to the ancients and freely utilised in Italy in the 16th century. Not until the 18th century was it favoured in England.

Stundists, a religious sect of South Russia, converted to Puritan principles by German missionaries, and subjected to much persecution by the peasant adherents of the Greek Church in 1879.

Sturgeon, a large elongated marine fish, with five rows of osseous bucklers, and pointed mouth with four barbels. It is plentiful in the seas of our coasts, and often attains a length of from 8 to 10 feet. It is a good table fish, and passes the spawning period in rivers. Caviare is prepared from sturgeon ova.

Sublimation, the process by which solid substances are first turned into vapour by heating and then allowed to cool into solidity, thus becoming freed from impurities.

Sublime Porte, the official name of the court of the Sultan of Turkey. The name was originally given to a piece of sacred black stone placed at the entrance to the palace of the caliphs of Bagdad.

Submarine Boats have in recent years become an important feature of the fleets of different nations. The French were the first to introduce them. They are of two main classes, large submersible boats of considerable range of action, and a smaller kind mostly for harbour defence. In 1913 France had 100 submarines, Great Britain 64, Russia 29, Germany 16.

Succession, Acts of, have been passed at various periods to secure royal descent in a particular line. That establishing the Protestant Succession, passed in 1689, is the one under which our present dynasty reigns.

Suez Canal, connecting the Red Sea to the Bay of Pelusium, was first projected in 1853 by Ferdinand de Lesseps, and the consent of the governments of Egypt, Turkey, Russia, France, and Austria were obtained to its being cut. The British Government, however, withheld their approval, a company was formed with a capital of £8,000,000, mostly subscribed in France, and in 1859 the formal opening of the Canal took place. It has a length of 99 miles, and was at first of sufficient depth only for vessels drawing 26 feet of water. Since then it has been deepened, and now can receive vessels drawing up to 29 feet of water, and operations are in progress for a further deepening. The Canal shortens the distance between London and Bombay by about 23 days. The total cost at the time of opening was £12,000,000, of which £3,500,000 was paid to the Khedive in shares, and it was the purchase of these shares in 1875 for £4,000,000 by the British Government that gave Britain a controlling interest which has proved so advantageous to her commerce. These shares are worth £30,000,000, and yield over £1,000,000 per annum in dividends. In 1870 500 vessels traversed the canal; in 1912 the number was 5,373, of a total net tonnage of 20,275,120, no fewer than 3,335 being British ships aggregating a tonnage of 12,247,624, Germany coming next with 698 vessels.

Sugar, an article of food obtained from the juices of the sugar cane, the sugar beet, the sugar maple, and certain grasses. These yield sugar in its crude form, after which it is refined by well-known processes. Treacle is sugar in its uncrystallised form.

Sulphur, an elementary brittle crystalline solid abounding in the vicinity of volcanoes. It occurs in combination with other elements, such as sulphates and sulphides, and allied with oxygen, hydrogen, chlorine, etc., is of great commercial utility. Used in its pure state it constitutes the inflammable element in gunpowder.

Sulphuric Acid, a compound of great commercial importance, used in a variety of manufactures, and composed of sulphur, oxygen and hydrogen.

Sultan, the title of the Turkish Ruler and first held by Angrolipex and Musgrad in the 11th century.

Sumptuary Laws were not uncommon in ancient times. Both the Greeks and Romans passed laws against luxury, and under Edward III. and Henry VIII. many curious restrictions were imposed in England, prescribing the quality of the cloth which should be worn by people of different ranks, etc.

Sun, the centre of the solar system, estimated to be distant from the earth 93,000,000 miles, to have a diameter of 865,000,000 miles, and is 7,305 times the volume, and 332,000 times the weight, of the earth. It has a seeming diurnal motion from East to West caused by the earth's rotation on its axis, and an annual motion through the ecliptic caused by the earth's revolution around the sun. From these motions we get the variations day and night, and the seasons. Large spots are observed on the sun—varying in size from 30,000 miles in diameter—which form and disappear at irregular intervals. Investigation of the solar system shows that in its atmosphere are present hydrogen, oxygen, calcium, radium, helium, sodium, magnesium, lead, uranium, aluminium, and other elements. The sun's temperature is such that it is estimated each square metre of the sun's surface radiates a sufficient quantity of heat per minute to raise 10,000 kilograms of water from freezing to boiling point.

Sunday, the first day of the week, among the Christians called "Lord's Day." In ancient times it was the day on which the sun was worshipped. In Anglo-Saxon days the Sabbath day was kept Holy from Saturday at 3 p.m. to Monday, day-break.

Sunday Schools have existed in one form or another since the 16th century, but as at present organised were established by Robert Raikes, a Gloucester printer, in 1780.

Sun Dial. (See **Dials**.)

Sun-Fish, a genus of sea-fishes of rounded form, of which there are many species. The common sun-fish averages from 4 to 5 feet in length.

Sunnites, the great body of Mahomedans who accept the *Sunnah*, a collection of traditions concerning Mahomed, as well as the Koran. Only the Shiites, mostly confined to Persia, reject the *Sunnah*.

Surgeons are strictly distinct from physicians, in that they deal with such diseases or injuries as demand operations by instruments for their cure. Most doctors, however, are now both physicians and surgeons—general practitioners—yet no one is entitled to call himself surgeon until he is a Fellow or a Member of one of the Royal Colleges of Surgeons, or of some other body authorised to confer the degree of Bachelor of Surgery.

Surnames were not used in England before the Conquest. The elder Normans used the word "Fitz" signifying son, as "Fitzwilliam." The "O" of the Irish meant grandson, as "O'Connor," while the Scottish Highlanders used "Mac" for son, as "MacKenzie," "Macintosh," etc. Then among the English the word "son" itself was simply added to the father's name, as "Johnson," "Robertson," "Simpson," etc. When surnames came into use they generally had reference to occupation, places of residence, or personal characteristics, and this style of naming is responsible for the great majority of existing surnames. Smith, Taylor, Butler, Baker, etc., are of the occupation type; Hill, Dale, Brook, Beck, etc., and place-names generally, belong to what may be called the geographical type; while personal peculiarities are denoted in such names as Savage, Redman, Black, White, Brown, etc.

Surplice, a white linen garment or robe of office worn by clergymen, choristers, and other church officials during Divine worship. It first came into use in the 4th century and was general in the 8th century. The fact that this garment was worn by early ecclesiastics *super pelle*, that is, above the dressed skins which constituted their ordinary attire in winter, explains the derivation of the word.

Suspension Bridges. (See **Bridges**.)

Suttee, the practice prevalent in some parts of India, until specially prohibited by a law of 1829, of the self-burning of widows on their husband's pyre, the idea being, according to the religion of Brahma, that widows thus immolated passed direct to heaven. As many as 700 widows have thus perished in one year in Bengal alone.

Swallow, a familiar summer visitor to Britain, arriving in April and leaving in October. There are nearly 100 species, distributed over most parts of the globe, but only three visit England—the Common Swallow, the House Martin, and the Sand Martin.

Swan, a large water-bird of graceful appearance, greatly esteemed for its whiteness and beauty, and kept on many rivers and ornamental waters in this country. The largest swannery is at Abbotsbury, near Weymouth.

Swearing, on the Gospels, was first introduced in judicial proceedings about 600. There are various enactments imposing fines for profane swearing. (See **Oaths**.)

Swedenborgians are the followers of Emmanuel Swedenborg. They also call themselves "the New Jerusalemites."
